1. Pump data

Introduction

TP pumps are designed for applications such as:

- district heating systems
- heating systems
- air-conditioning systems
- district cooling systems
- water supply
- industrial processes
- industrial cooling.

The pumps are available with either mains-operated motors (TP and TPD) or electronically speed-controlled motors (TPE, TPED, TPE2, TPE2 D, TPE3, TPE3 D).

The pumps are all single-stage, in-line centrifugal pumps with mechanical shaft seal. The pumps are of the close-coupled type, that is the pump and the motor are separate units.

TP, mains-operated pumps

The TP range is divided into three groups based on their construction: TP Series 100, 200 and 300.

TP Series 100 with union or flange connection

Rp 1 (DN 25) to Rp 1 1/4 (DN 32) and motor sizes from 0.12 to 0.25 kW.

For further information, see section TP Series 100 and 200 pumps.

TP Series 200 with flange connection

DN 32 to DN 100 and motor sizes from 0.12 to 2.2 kW.

For further information, see section TP Series 100 and 200 pumps.

TP Series 300 with flange connection

We offer two versions:

- 16-bar version with DN 32 to DN 350 flanges and motor sizes from 0.25 to 315 kW
- 25-bar version with DN 100 to DN 400 flanges and motor sizes from 5 to 630 kW.

For further information, see section TP Series 300 pumps.

Related information

6. [TP Series 100 and 200 pumps](#)
7. [TP Series 300 pumps](#)

TPE, TPE2 and TPE3 speed-controlled pumps

We offer the following speed-controlled pumps which are based on the construction and choice of material of the TP pumps:

- TPE Series 1000 pumps without factory-fitted differential-pressure sensor.
- TPE Series 2000 pumps with factory-fitted differential-pressure sensor.
- TPE2 pumps without built-in differential-pressure sensor and temperature sensor.
- TPE3 pumps with built-in differential-pressure sensor and temperature sensor.

All pumps up to 22 kW are fitted with Grundfos permanent-magnet MGE motors with motor efficiency class IE5 according to IEC 60034-30-2.

All pumps from 30 kW to 55 kW are delivered with motors with motor efficiency class IE3, IE4 or IE5 according to IEC 60034-30-2.

TPE Series 1000 pumps

The motors have a built-in frequency converter.

Via an external signal from a sensor or a controller, the pumps allow for any configuration and control method required, that is constant pressure, temperature or flow.

For further information, see section TPE Series 1000 pumps.

TPE Series 2000 pumps

The pumps have a factory-fitted differential-pressure sensor.

The pumps are factory-set to proportional-pressure control.

The motors have a built-in frequency converter for continuous adjustment of the pressure to the flow rate.

The range is recognised as a preset solution for quick and safe installation. Pumps up to 22 kW have a colour display for easy and intuitive pump setup and with full access to all functions.

TM068893

Example of main display on a TPE Series 2000 with advanced control panel

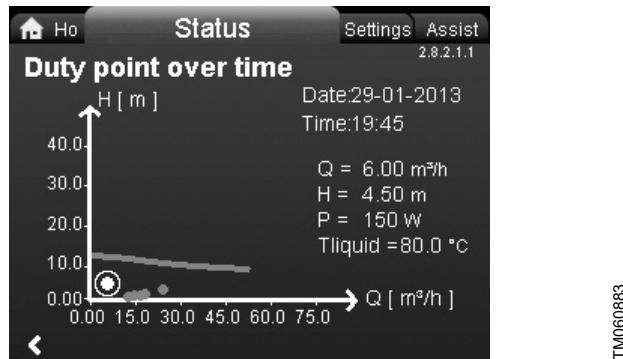

For further information, see section TPE Series 2000 pumps.

TPE2 pumps

The permanent-magnet motors have a built-in frequency converter and the hydraulic components have been specially designed for optimum efficiency.

Via an external signal from a sensor or a controller, the pumps allow for any configuration and control method required, that is constant pressure, temperature, flow or level. For further information, see section TPE2.

TPE3 pumps

Example of status display for TPE3 pumps

The pumps have a built-in differential-pressure sensor and temperature sensor.

The pumps are factory-set to AUTOADAPT control.

The permanent-magnet motors of the pumps have a built-in frequency converter for continuous adjustment of the pressure to the flow rate. The hydraulic components have been specially designed for optimum efficiency.

The range is recognised as a preset solution for quick and safe installation. The pumps have a colour display for easy and intuitive pump setup and with full access to all functions. The pumps incorporate the following advanced functions:

- AUTOADAPT
- FLOWADAPT
- automatic night setback
- FLOWLIMIT
- heat energy monitor
- flow rate estimation
- proportional pressure
- constant pressure
- constant differential temperature control
- constant temperature control.

For further information, see section TPE3.

Why select a TPE pump

A pump with electronic speed control offers these benefits:

- energy savings
- increased comfort
- control and monitoring of pump performance
- communication with the pump.

ATEX-approved TP pumps

On request, Grundfos offers TP and TPD pumps with ATEX-approval.

See section Key application data.

High-efficiency motors, IE3 and IE4

TP pumps are fitted with high-efficiency motors.

The pumps are primarily fitted with motors that meet the legislative requirements of the EuP IE3 grade.

Pumps from 75 kW to 200 kW are fitted with motors that meet the legislative requirements of the EuP IE4 grade.

The pumps are also available with motors from 2.2 to 55 kW that meet the legislative requirements of the EuP IE4 grade. For further information, see section Motors.

Energy-optimised pumps

TP pumps are energy-optimised and comply with the EuP Directive (Commission Regulation (EC) No 547/2012) in which most pumps are classified or graduated in an energy efficiency index, MEI. See also section Minimum efficiency index.

Identification

Type key for TP, TPD, TPE, TPED

Example: TPED 65-120/2 S-A-F-A-BQQE-GDB

Code	Type	Explanation
TP		Pump range
E		Electronically speed-controlled pump, Series 1000, 2000
D		Twin-head pump
65		Nominal diameter of inlet and outlet ports, DN
-120		Maximum head [dm]
/2		Pole number
Code for pump with sensor version:		
S	[Blank]	TPE Series 1000 with MGE motor and without sensor
	S	TPE Series 2000 with factory-fitted differential-pressure sensor
	NC	TPE Series 1000 with Siemens/Nidec motor with integrated CUE
	SC	TPE Series 2000 with built-in differential-pressure sensor and Siemens/Nidec motor with integrated CUE
Code for pump version. The codes may be combined:		
-A	A	Basic version
	A3	PN 25 flange
	B	Oversize motor
	E	With ATEX approval, certificate or test report, the second character of the code for pump version is an E
	I	PN 6 flange
Code for pipe connection:		
-F	F	DIN flange
	O	Union
Code for materials:		
-A	A	Basic version
	I	Stainless steel 1.4308 pump housing and motor stool
	Z	Bronze pump housing and motor stool
	B	Bronze impeller
	S	Stainless steel 1.4408 impeller
	O	Ductile cast-iron pump housing with cast-iron impeller
	Y	Ductile cast-iron pump housing with bronze impeller
-BQQE Code for shaft seal including other plastic and rubber pump parts, except the neck ring. See section Codes for shaft seal.		
-G Code for rated motor power [kW]. See section Codes for rated motor power.		
D Code for phase and voltage [V] or other information. See section Codes for phase and voltage or other information.		
B Code for speed variant [rpm]. See section Codes for speed variant.

Type key for TPE2, TPE3**Example: TPE3 D 65-120 S-A-F-A-BQQE-FAB**

Code	Type	Explanation
		Pump range, electronically speed-controlled pump
TPE3	TPE2	Without built-in sensor
	TPE3	Built-in differential-pressure and temperature sensor
D		Twin-head pump
65		Nominal diameter of inlet and outlet ports, DN
-120		Maximum head [dm]
S	S	Built-in differential-pressure and temperature sensor
	N	Without built-in sensor
		Code for pump version:
-A	A	Basic version
	I	PN 6 flange
	X	Special version
-F		Code for pipe connection:
	F	DIN flange
		Code for materials:
-A	A	Basic version
	I	Stainless steel 1.4308 pump housing and motor stool
-BQQE		Code for shaft seal including other plastic and rubber pump parts, except the neck ring. See section Codes for shaft seal.
-F		Code for rated motor power [kW]. See section Codes for rated motor power.
A		Code for phase and voltage [V] or other information. See section Codes for phase and voltage or other information.
B		Code for speed variant [rpm]. See section Codes for speed variant.

Codes for shaft seal**Example: BQQE**

Code	Type	Explanation
		Grundfos type designation
B	A	O-ring seal with fixed seal driver
	B	Rubber bellows seal
	D	O-ring seal, balanced
	G	Bellows seal with reduced seal faces
	R	O-ring seal with reduced seal faces
		Material of rotating face
Q	A	Carbon, antimony-impregnated
	B	Carbon, resin-impregnated
	Q	Silicon carbide
		Material of stationary seat
Q	B	Carbon, resin-impregnated
	Q	Silicon carbide
	U	Tungsten carbide
		Material of secondary seal
E	E	EPDM
	P	NBR rubber
	V	FKM
	F	FXM

Codes for rated motor power

Code	Description	
	[hp]	[kW]
A	0.16	0.12
B	0.25	0.18
C	0.33	0.25
D	0.5	0.37
E	0.75	0.55
F	1	0.75
G	1.5	1.1
H	2	1.5
I	3	2.2
J	4	3
K	5 (5.5 ¹⁾)	3.7 (4 ¹⁾)
L	7.5	5.5
M	10	7.5
N	15	11
O	20	15
P	25	18.5
Q	30	22
R	40	30
S	50	37
T	60	45
U	75	55
V	100	75
W	125	90
X	Bare shaft pump	
Y	> 200 ²⁾	> 150 ²⁾
1	150	110
2	175	132
3	200	150
4	215 ³⁾	160 ³⁾
5	250 ³⁾	185 ³⁾

1) Value in bracket is for the standard IEC motor size. Value outside bracket is for the motor size according to NEMA standards.

2) Used for pumps where the pump shaft input power exceeds 200 hp (150 kW) and is not regulated under the DOE pump rule.

3) Special cases with power sizes above 200 hp (150 kW) which are still regulated under the DOE pump rule. For example: Pump has a P2 value of 198 hp (147.6 kW) in its duty point (in DOE scope) but customer wants the 215 hp (160 kW) motor instead of the 200 hp (150 kW). The pump is in scope of the DOE regulation and requires a PEI value and a motor code.

Codes for phase and voltage or other information

Code	Description
A	E-motor (ECM ⁴⁾), 1 x 200-240 V
B	E-motor (ECM ⁴⁾), 3 x 200-240 V
C	E-motor (ECM ⁴⁾), 3 x 440-480 V
D	E-motor (ECM ⁴⁾), 3 x 380-500 V
V	Intended for use with external VFD only, asynchronous motor
W	Not for sale in North America
X	No motor or US DOE regulated motor (CC marked motor)
Y	Out of DOE scope
Z	E-motor, asynchronous motor

4) ECM: Electronically Commutated Motor.

Codes for speed variant

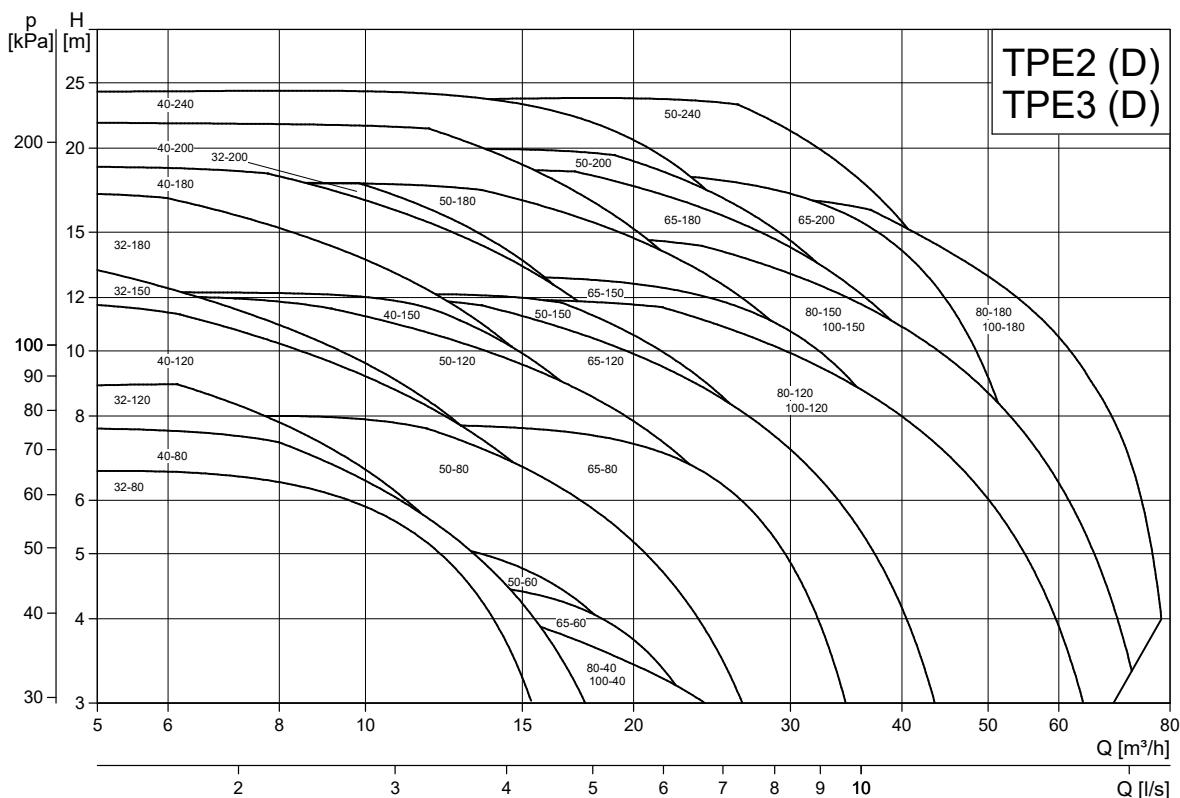

Code	Description
A	1450-2200 RPM, E-motor (ECM ⁵⁾)
B	2900-4000 RPM, E-motor (ECM ⁵⁾)
C	4000-5900 RPM, E-motor (ECM ⁵⁾)
1	2-pole, 50 Hz (Asynchronous motor)
2	2-pole, 60 Hz (Asynchronous motor)
3	4-pole, 50 Hz (Asynchronous motor)
4	4-pole, 60 Hz (Asynchronous motor)
5	6-pole, 50 Hz (Asynchronous motor)
6	6-pole, 60 Hz (Asynchronous motor)
7	8-pole, 50 Hz (Asynchronous motor)
8	8-pole, 60 Hz (Asynchronous motor)

5) ECM: Electronically Commutated Motor.

7) Bronze versions are only available as single-head pumps.

8) 2-pole motors above 5.5 kW can be operated at 3 x 660-690 YV. Smaller motor sizes cannot be operated at 3 x 660-690 YV.

Product range, 4-pole, PN 6, 10, 16, 25

- Standard.

400.0	-	75	-
500.0	-	75	-
560.0	-	78	-
630.0	-	78	-

The values apply only to MG and Siemens motors.

The values have a tolerance of 3 dB according to EN ISO 4871. The tolerance is not added to the values in the table.

The audible noise from TP pumps is primarily noise from the motor fan. The selection of TPE pumps will reduce the noise at partial load, as the motor and, consequently, the motor fan run at a lower speed. Possible flow noise from control valves is also reduced at partial load in the case of the TPE, TPE2, and TPE3 pumps.

Ambient temperature

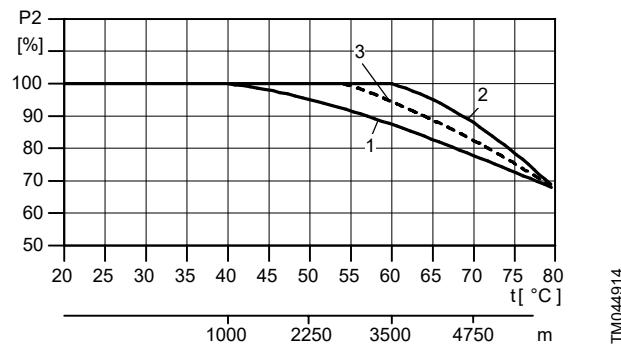

MG IE3 motors: 0.75 - 22 kW motors, 2-pole	-20 to +60 °C
Siemens IE3 motors: 30-55 kW motors, 2-pole 0.55 - 55 kW motors, 4-pole	-20 to +55 °C
Siemens IE4 motors	
MGE motors	-20 to +50 °C
Siemens/Nidec motor with integrated CUE	0 to +45 °C
Other motor sizes:	-20 to +40 °C
Storage	Down to -30 °C

Installation altitude

Pump with standard motor

If the ambient temperature exceeds maximum values or if the motor is located more than 1000 m above sea level, the motor output, P2, must be reduced due to the low density and consequent low cooling effect of the air. In such cases, it may be necessary to use an oversize motor with a higher rated output.

Pos.	Description
3	Siemens IE3 motors: 30-55 kW motors, 2-pole 0.55 - 55 kW motors, 4-pole Siemens IE4 motors
2	MG IE3 motors: 0.75 - 22 kW motors, 2-pole
1	Other motor sizes

Maximum motor output in relation to ambient temperature and altitude

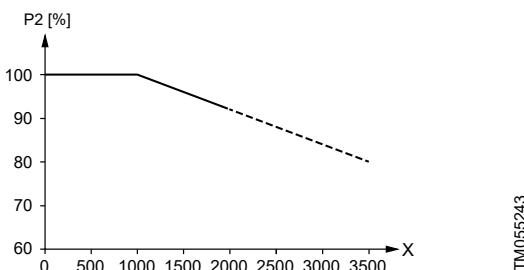

Pump with Grundfos MGE motor

Description
MGE motors

Installation altitude is the height above sea level of the installation site.

Motors installed up to 1000 m above sea level can be loaded 100 %.

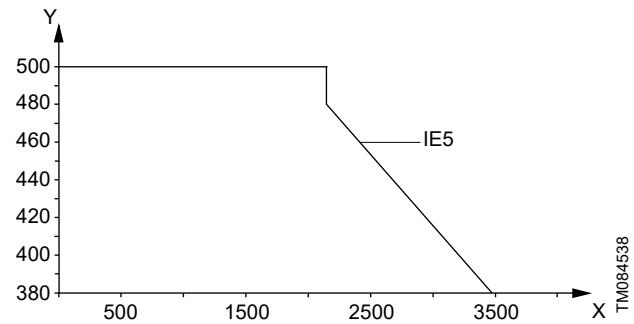

The motors can be installed up to 3500 m above sea level.

Motor output power in relation to altitude

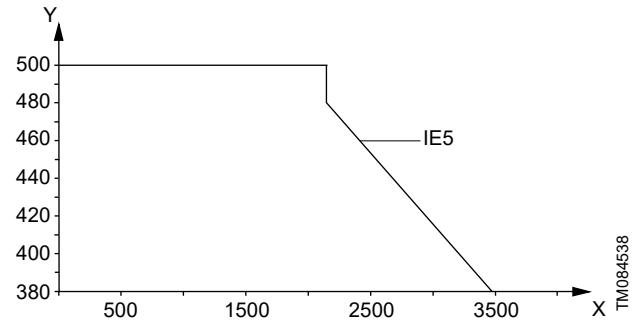

Pos.	Description
X	Altitude [m]

In order to maintain the galvanic isolation and ensure correct clearance according to EN 60664-1:2007, you must adapt the supply voltage to the altitude:

Supply voltage for three-phase motor in relation to altitude

Pos.	Description
X	Altitude [m]
Y	Supply voltage [V]

Supply voltage for single-phase motor in relation to altitude

Pos.	Description
X	Altitude [m]
Y	Supply voltage [V]

Note:

Motors installed more than 1000 m above sea level must not be fully loaded due to the low density and consequent low cooling effect of the air.

If the motor is to operate at ambient temperatures between 50 and 60 °C, select an oversized motor. Contact Grundfos.

Pump with Siemens/Nidec motor with integrated CUE

Derating must be taken into account when using CUE in these situations:

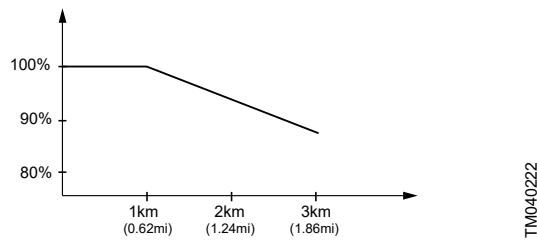

- low air pressure (heights)
- low speeds
- installations with long motor cables
- cables with a large cross-section
- high ambient temperature.

The required action is described in the next sections.

Low air pressure

At low air pressure, the cooling capability of air is reduced.

At altitudes above 1000 m (3280 ft), the maximum output current should be derated in accordance with the diagram in the figure below.

Derating of output current at low air pressure

At altitudes above 2000 m (6561 ft), the PELV requirements cannot be met.

PELV = Protective Extra Low Voltage.

An alternative is to lower the ambient temperature at high altitudes and thereby ensure 100 % output current at high altitudes.

Example

At an altitude of 2000 m (6561 ft), the output current 24.0 A of the selected CUE must be derated to 92 % according to figure Derating of output current at low air pressure. This is equal to 22.1 A and lower than the maximum motor current 23.6 A. The selection is not valid.

Data of the new selected CUE:

Max. output current:	32.0 A
Typical shaft power:	15.0 kW (20 hp)
Product number (IP20):	96754695

Calculation of derated current at an altitude of 2000 m (6561 ft):

Maximum output current = $32.0 \times 0.92 = 29.4$ A.

This is higher than the maximum motor current 23.6 A.

The new selection is valid.

High ambient temperature

If the output current is reduced to 80 % of the nominal output current of the CUE in question, the ambient temperature may be 5 °C (41 °F) higher.

The other possibility is to use a unit one size bigger. For higher temperature increases, bigger units are required. The efficiency of the CUE will, however, be reduced at higher temperatures.

If the CUE gets too hot, it will reduce the switching frequency.

Note that the nominal temperature rating depends on the enclosure type.

The maximum ambient temperature of the different enclosures can be found in section Technical data.

5. Pumped liquids

Pumped liquids

The pump is suitable for thin, clean, non-aggressive and non-flammable liquids, not containing solid particles or fibres that may attack the pump mechanically or chemically. See section List of pumped liquids.

Examples

- Central heating system water. The water must meet the requirements of accepted standards on water quality in heating systems.
- cooling liquids
- hot tap water
- industrial liquids
- softened water.

If glycol or another antifreeze agent is added to the pumped liquid, the pump must have a shaft seal of the BQQE or DQQE type. See section Recommended shaft seal for water-glycol mixture.

The pumping of liquids with density and/or kinematic viscosity higher than that of water will have the following effects:

- a considerable pressure drop
- a drop in hydraulic performance
- a rise in power consumption.

In such cases, fit the pump with a bigger motor. If in doubt, contact Grundfos.

If the water contains mineral or synthetic oils or chemicals or if other liquids than water are pumped, chose the O-rings accordingly.

Related information

[List of pumped liquids](#)

[Recommended shaft seal for water-glycol mixture](#)

Liquid temperature

Liquid temperature: -40 to +150 °C.

Please note that shaft seals operating close to their maximum temperature will require regular maintenance or replacement.

TPE2, TPE3	BQBE	0 to +120 °C ¹⁵⁾
	BQQE	-25 to +120 °C

¹²⁾ TP Series 300, PN 16 pumps are designed for a maximum operating temperature of 140 °C. For operation above 120 °C, select an alternative shaft seal. Contact Grundfos.

¹³⁾ For operation above 140 °C, contact Grundfos. At 120 to 150 °C, the maximum operating pressure is less than 23 bar.

¹⁴⁾ At 120 to 150 °C, the maximum operating pressure is less than 23 bar.

¹⁵⁾ 140 °C for a short period.

Depending on the type of cast-iron version and the pump application, the maximum liquid temperature may be limited by local regulations and laws.

List of pumped liquids

TP and TPD pumps are designed for circulation systems with constant flow rate; TPE2, TPE2D, TPE3, TPE3D, TPE pumps for systems with variable flow rate.

Thanks to their design, you can use the pumps in a wider liquid temperature range than pumps of the canned rotor type.

A number of typical liquids are listed below.

You can use other pump versions, but we consider the ones stated in the list to be the best choices.

The list is intended as a general guide only, and it cannot replace actual testing of the pumped liquids and pump materials under specific working conditions. If in doubt, we recommend that you fill in the form shown on section Key application data and contact Grundfos.

Use the list with some caution, as factors such as concentration of the pumped liquid, liquid temperature or pressure may affect the chemical resistance of a specific pump version.

Legend

A May contain additives or impurities that may cause shaft seal problems.

B The density and/or viscosity differ from those of water.
Consider this when calculating motor and pump performance.

C The liquid must be oxygen-free (anaerobic).

D Risk of crystallisation or precipitation in the shaft seal.

E Insoluble in water.

F The shaft seal rubber parts must be replaced with FKM rubber.

G Bronze housing or impeller required.

H Risk of formation of ice on the standby pump.

H The risk only applies to TP, TPE Series 200 pumps.

6. TP Series 100 and 200 pumps

GRB2850

GR8261

TP Series 100 and TP Series 200

Technical data

Flow rate:	Up to 90 m ³ /h
Head:	Up to 27 m
Liquid temperature, TP Series 100:	-25 to +120 °C
Liquid temperature, TP Series 200:	-25 to +140 °C
Maximum operating pressure:	Up to 16 bar
Direction of rotation:	Counterclockwise

Construction

Grundfos TP Series 100 and Series 200 pumps are single-stage, close-coupled pumps with in-line inlet and outlet ports of identical diameter.

The pumps are fitted with a fan-cooled asynchronous motor. Motor and pump shafts are connected via a rigid two-part coupling.

TP Series 100 pumps with union connection are available as single-head, TP, pumps.

TP Series 200 pumps are available as single-head, TP, and twin-head, TPD, pumps.

TP Series 200 pumps have PN 6 or PN 10 flanges.

The pumps are fitted with an unbalanced mechanical shaft seal.

The pumps are of the top-pull-out design, that is you can remove the power head (motor, pump head and impeller) for maintenance or service while the pump housing remains in the pipes.

The twin-head pumps are designed with two parallel power heads. A flap valve in the common outlet port is opened by the flow of the pumped liquid and prevents backflow of liquid into the idle pump head.

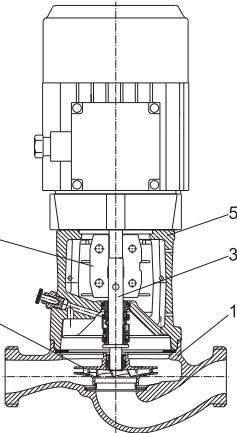

As radial and axial forces are absorbed by the fixed bearing in the motor drive-end, the pump requires no bearing.

The pumps are fitted with high-efficiency motors.

Pumps with a bronze or stainless-steel pump housing are suitable for hot water recirculation.

Mechanical shaft seal

Two types of unbalanced mechanical shaft seal are available as standard:

- BQBE**

The BQBE shaft seal is a rubber bellows seal with silicon carbide/carbon seal faces and secondary seals of EPDM.

- BQQE**

The BQQE shaft seal is a rubber bellows seal with silicon carbide/silicon carbide seal faces and secondary seals of EPDM.

For more information about common pumped liquids with recommended shaft seals, see section *List of pumped liquids*.

Shaft seal specification

Unbalanced shaft seal	TP Series 100	Version KU according to EN 12756
	TP, TPD Series 200	Version NU according to EN 12756
Shaft diameter		12 and 16 mm

Connections

TP Series 100 pumps with union connection have inlet and outlet union threads to ISO 228-1.

TP Series 200 pumps up to DN 65 are fitted with combination flanges PN 6 / PN 10. DN 80 or DN 100 pumps have either PN 6 or PN 10 flanges. You can connect all flanges to flanges in accordance with EN 1092-2 and ISO 7005-2.

Features and benefits

TP Series 100 and Series 200 pumps have these features and benefits:

Optimised hydraulics for high efficiency

- Reduced power consumption.

High-efficiency motors

- TP pumps are fitted with high-efficiency motors. High-efficiency motors offer reduced energy consumption. TP pumps are primarily fitted with motors that meet the legislative requirements of the EuP IE3 grade. For further information, see section *Motors*.

Top-pull-out design

- Easy dismantling in case of service.

In-line design

- Contrary to end-suction pumps, in-line pumps allow straight pipes and thus often reduce installation costs.

Pump housing and pump head are electrocoated to improve the corrosion resistance

- Electrocoating includes:

- Alkaline cleaning.
- Pretreatment with zinc phosphate coating.
- Cathodic electrocoating, epoxy.
- Curing of paint film at 200 to 250 °C.

For low-temperature applications at a high humidity, Grundfos offers TP pumps with extra surface treatment to avoid corrosion. These pumps are available on request.

Stainless-steel impeller and neck ring

- Wear-free operation with high efficiency.

7. TP Series 300 pumps

TP Series 300

GR8259

Technical data

	PN 16 version	PN 25 version
Flow rate [m ³ /h]	Up to 2000	Up to 4500
Head [m]	Up to 93	Up to 140
Liquid temperature [°C]	-25 to +140	-40 to +150 ²⁰⁾
Maximum operating pressure [bar]	16	25
Direction of rotation	Clockwise	

²⁰⁾At 120 to 150 °C, the maximum operating pressure is less than 23 bar.

Construction

Grundfos TP, TPD Series 300 pumps are single-stage, close-coupled pumps with in-line inlet and outlet ports of identical diameter.

The pumps are fitted with a fan-cooled asynchronous motor. Motor and pump shafts are connected via a rigid sleeve coupling.

Most TP Series 300 pumps are available as single-head, TP, and twin-head, TPD pumps.

TP Series 300 pumps have PN 16 flanges or PN 25 flanges.

The largest pumps have DN 500, PN 40 inlet flanges and DN 400, PN 40 outlet flanges and a maximum operating pressure of 25 bar.

The pumps are fitted with an unbalanced or a balanced mechanical shaft seal.

The pumps are of the top-pull-out design, that is you can remove the power head (motor, pump head and/or motor stool and impeller) for maintenance or service while the pump housing remains in the pipes.

The pump housing is provided with a replaceable wear ring to ensure high pump efficiency for life.

The twin-head pumps are designed with two parallel power heads. A non-return flap valve in the common outlet port is opened by the flow of the pumped liquid and prevents backflow of liquid into the idle pump head.

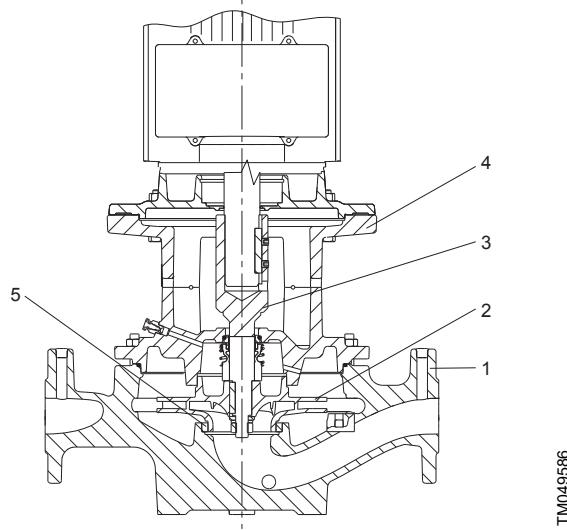

As radial and axial forces are absorbed by the fixed bearing in the motor drive-end, the pump requires no bearing.

The impeller is hydraulically balanced to minimise axial forces.

TP, TPD Series 300 pumps are fitted with high-efficiency motors.

TP Series 300 pumps with bronze impeller are suitable for pumping brine.

Mechanical shaft seal

For 16-bar versions, the following types of unbalanced mechanical shaft seals are available as standard:

- **BAQE**

The BAQE shaft seal is a rubber bellows seal with carbon/silicon carbide seal faces and secondary seals of EPDM.

- **BQQE**

The BQQE shaft seal is a rubber bellows seal with silicon carbide/silicon carbide seal faces and secondary seals of EPDM.

For 25-bar versions, the following types of balanced mechanical shaft seals are available as standard:

- **DAQF**

The DAQF shaft seal is a balanced O-ring seal with carbon/silicon carbide seal faces and secondary seals of FXM.

- **DQQE**

The DQQE shaft seal is a balanced O-ring seal with silicon carbide/silicon carbide seal faces and secondary seals of EPDM.

- **DBUE**

The DBUE shaft seal is a balanced O-ring seal with carbon/tungsten carbide seal faces and secondary seals of EPDM.

For further information about common pumped liquids with recommended shaft seals, see section List of pumped liquids.

Special shaft seals are available for partly conditioned water or other liquids containing abrasive or crystallising particles. See section List of pumped liquids.

Connections

TP Series 300 pumps have PN 16 or PN 25 flanges. All dimensions are according to ISO 7005-2 or EN 1092-2.

Features and benefits

TP Series 300 pumps have these features and benefits:

Optimised hydraulics for high efficiency

- Reduced power consumption.

High-efficiency motors

- TP pumps are fitted with high-efficiency motors. High-efficiency motors offer reduced energy consumption. TP pumps are primarily fitted with motors that meet the legislative requirements of the EuP IE3 or IE4 grade. For further information, see section Motors.

Top-pull-out design

- Easy dismantling in case of service.

In-line design

- Contrary to end-suction pumps, in-line pumps allow straight pipes and thus often reduced installation costs.

Motor-pump shaft with sleeve coupling

- Stable and quiet operation.
- Easy dismantling in case of service.

Hydraulically and mechanically balanced impeller

- The impeller is hydraulically and mechanically balanced to increase the life of motor bearings and shaft seal.

Surface treatment

TP series 300 pumps are given the following surface treatment

Pump type	Electrocoating	Spray painting
TP Series 300 from DN 32 to DN 350	x	
TP Series 300, DN 400		2x

Electrocoating includes:

1. Alkaline cleaning.
2. Pretreatment with zinc phosphate coating.
3. Cathodic electrocoating, epoxy.
4. Curing of paint film at 200-250 °C.

For low-temperature applications at a high humidity, Grundfos offers TP pumps with extra surface treatment to avoid corrosion. These pumps are available on request.

8. TPE Series 1000 pumps

TPE Series 1000

TM075844

TM075849

Technical data

Flow rate:	Up to 1100 m ³ /h
Head:	Up to 92 m
Liquid temperature:	-25 to +150 °C
Maximum operating pressure:	25 bar
Motor sizes, single-phase:	0.12 to 1.5 kW
Motor sizes, three-phase:	0.12 to 55 kW

Construction

TPE, TPED Series 1000 pumps are based on TP, TPD Series 100, 200 and 300 pumps.

The main difference between the TP and the TPE Series 1000 pump range is the motor. The motor of TPE Series 1000 pumps has a built-in frequency converter for continuous adjustment of the pressure to the flow rate. All pumps with motors up to 22 kW are fitted with Grundfos permanent-magnet MGE motors with motor efficiency class IE5 according to IEC 60034-30-2. TPE pumps from 30 to 55 kW are free of choice with motors equivalent to IE3, IE4 or IE5.

The pumps are suitable for applications where the pressure, temperature, flow rate or another parameter is to be controlled on the basis of signals from a sensor at some point in the system.

Note: The pumps are not fitted with a sensor from the factory.

For further information on construction and materials of the pumps, see sections TP Series 100 and 200 pumps and TP Series 300 pumps.

- 7. [TP Series 300 pumps](#)

Applications

TPE Series 1000 pumps have integrated speed control for automatic adaptation of performance to current conditions.

The energy consumption is thus kept at a minimum.

The pumps can operate at any duty point within the range between 25 and 100 % speed. In a part of the duty range, the pumps with MGE motor can operate at speeds up to 110 %.

TM081001

Duty range of TPE Series 1000 pumps

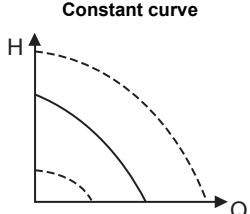

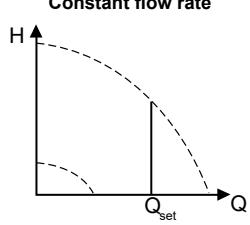

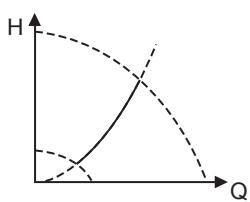

The 100 % curve corresponds to the curve of a pump with a mains-operated motor.

Depending on the application, the pumps offer energy savings, increased comfort or improved processing.

The pumps can be fitted with sensor types meeting the requirements mentioned in section Accessories.

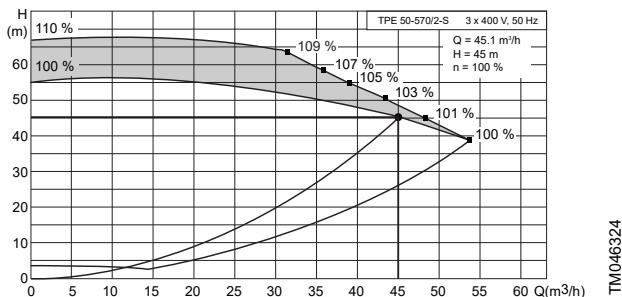

The charts below show possible control modes of the pumps in different applications.

System application	Select this control mode	Pump type
In systems with relatively large pressure losses in the distribution pipes and in air-conditioning and cooling systems.	Constant differential pressure with differential-pressure sensor located in the system	All
<ul style="list-style-type: none"> Two-pipe heating systems with thermostatic valves and the following: <ul style="list-style-type: none"> very long distribution pipes strongly throttled pipe balancing valves differential-pressure regulators large pressure losses in those parts of the system through which the total quantity of water flows, for example boiler, heat exchanger and distribution pipe up to the first branching. Primary circuit pumps in systems with large pressure losses in the primary circuit. Air-conditioning systems with the following: <ul style="list-style-type: none"> heat exchangers (fan coils) cooling ceilings cooling surfaces. 		
In systems with relatively small pressure losses in the distribution pipes.	Constant differential pressure	All
<ul style="list-style-type: none"> Two-pipe heating systems with thermostatic valves and the following: <ul style="list-style-type: none"> sized for natural circulation small pressure losses in those parts of the system through which the total quantity of water flows, for example boiler, heat exchanger and distribution pipe up to the first branching, or modified to a high differential temperature between flow pipe and return pipe, for example district heating. Underfloor heating systems with thermostatic valves. One-pipe heating systems with thermostatic valves or pipe balancing valves. Primary circuit pumps in systems with small pressure losses in the primary circuit. 		
In pressure boosting systems.	Constant pressure	All
In systems with a fixed system characteristic.	Constant temperature	All
Examples:	Constant differential temperature	
<ul style="list-style-type: none"> one-pipe heating systems boiler shunts systems with three-way valves hot water recirculation. 		

System application	Select this control mode	Pump type
If an external controller is installed, the pump is able to change from one constant curve to another, depending on the value of the external signal. The pump can also be set to operate according to the maximum or minimum curve: <ul style="list-style-type: none"> • Use the maximum-curve mode in periods in which a maximum flow rate is required. • This operating mode is for instance suitable for hot-water priority. • Use the minimum-curve mode in periods in which a minimum flow rate is required. 	Constant curve 	All
In systems requiring a constant flow rate, independently of pressure drop. Examples: <ul style="list-style-type: none"> • chillers for air-conditioning • heating surfaces • cooling surfaces 	Constant flow rate 	All
In systems requiring a constant tank level, independently of the flow rate. Examples: <ul style="list-style-type: none"> • process water tanks • boiler condensate tanks. 	Constant level 	0.12 - 22 kW
The multipump function enables the control of single-head pumps connected in parallel (two to four pumps) and without the use of external controllers. The pumps in a multipump system communicate with each other via the wireless GENIair connection or the wired GENI connection.	Assist menu, Multipump setup	0.12 - 22 kW

TPE, TPED pumps with extended performance range

Standard TPE, TPED pumps with MGЕ motor, 50 Hz, are able to operate in a range above the 100 % curve. See the figure below.

TPE and TPED pumps with extended performance range

The extended range is provided by means of optimised software which utilises the MGЕ motor in an optimum way. The result is that the pump is able to deliver higher head and flow with the same motor size.

The curve sheets in the TP data booklet only show the nominal 100 % QH curve.

Grundfos Product Center shows the extended performance range of the pumps. See section Grundfos Product Center.

Operating modes of twin-head pumps

The following operating modes are available for twin-head pumps:

Alternating operation

The two pumps run alternately for 24 operating hours. In case of fault in the operating pump, the other pump starts.

Standby operation

One pump is in constant operation. Every 24 operating hours the standby pump starts and runs for a short period to prevent it from seizing up. In case of fault in the operating pump, the standby pump starts.

In case of sensor fault, the operating pump switches to maximum operation.

Multipump function

All pumps with motors up to 22 kW have a multipump function.

The multipump function enables the control of single-head pumps connected in parallel or twin-head pumps without the use of external controllers. The pumps in a multipump system communicate with each other via the wireless GENIair connection or the wired GENI connection.

For further information on multipump system, see section Multipump function.

Related information

Control options

Communication with TPE, TPED Series 1000 pumps is possible via a central building management system, remote control (Grundfos GO) or control panel.

The purpose of controlling a pump is to monitor and control the pressure, temperature, flow rate and liquid level of the system.

For further information on control options of the pumps, see section Communication.

9. TPE Series 2000 pumps

TPE Series 2000

Technical data

Flow rate:	Up to 1100 m ³ /h
Head:	Up to 92 m
Liquid temperature:	-25 to +140 °C
Maximum operating pressure:	16 bar
Motor sizes (single-phase):	0.12 to 1.5 kW
Motor sizes (three-phase):	0.12 to 55 kW

Construction

TPE, TPED Series 2000 pumps are based on TP, TPD Series 200 and 300 pumps.

The main differences between the TP and the TPE Series 2000 pumps are the motor and the factory-fitted differential-pressure sensor.

The motor of TPE Series 2000 pumps has a built-in frequency converter for continuous adjustment of the pressure to the flow rate. All pumps with motors up to 22 kW are fitted with Grundfos permanent-magnet MGE motors that have motor efficiency class IE5 according to IEC 60034-30-2. TPE pumps from 30 to 55 kW are free of choice with motors equivalent to IE3, IE4 or IE5.

The range is a preset solution for quick and safe installation. The pumps fitted with motors up to 22 kW have a colour display for easy and intuitive pump setup and with full access to all functions.

TM058833

Example of main display on a TPE Series 2000 with advanced control panel

For further information on construction and materials of the pumps, see sections TP Series 100 and 200 pumps and TP Series 300 pumps.

- 7. [TP Series 300 pumps](#)

Applications

TPE Series 2000 pumps have integrated speed control for automatic adaptation of performance to current conditions.

The energy consumption is thus kept at a minimum.

The pumps can operate at any duty point within the range between 25 and 100 % speed. In a part of the duty range, the pumps with MGE motor can operate at speeds up to 110 %.

TM081001

Duty range of TPE Series 2000 pumps

The 100 % curve corresponds to the curve of a pump with a mains-operated motor.

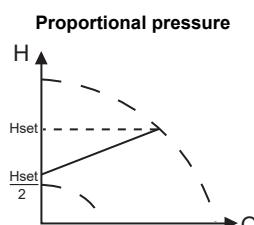

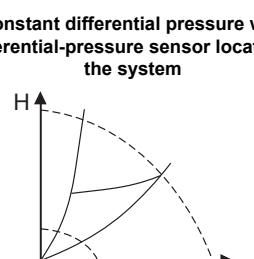

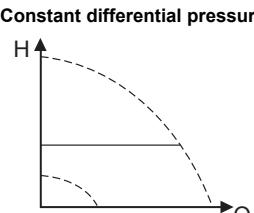

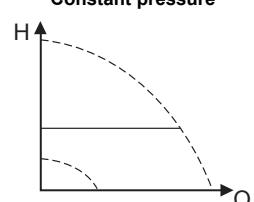

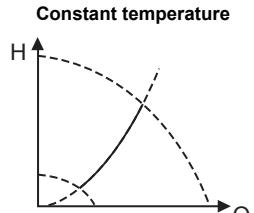

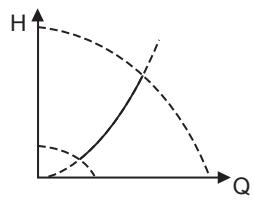

Depending on the application, the pumps offer energy savings, increased comfort or improved processing.

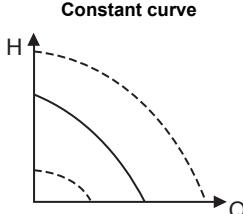

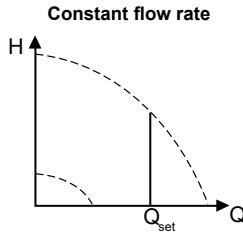

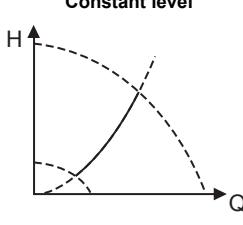

The pumps are suitable for applications requiring pressure control.

Proportional pressure

The pumps are factory-set to proportional pressure control. We recommend that you use proportional pressure control in systems with relatively large pressure losses, as it is the most economical control mode.

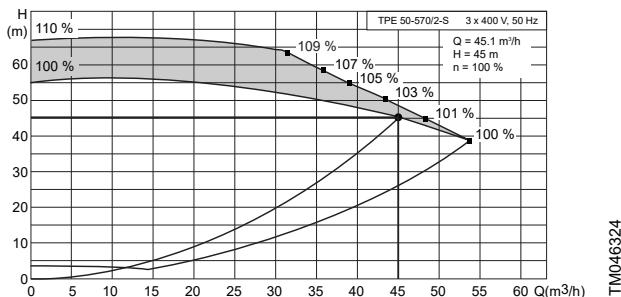

The charts below show possible control modes of the pumps in different applications.

System application	Select this control mode	Pump type

Control options

Communication with the pumps is possible via a central building management system, remote control (Grundfos GO) or control panel.

The purpose of controlling the pumps is to monitor and control the pressure, temperature, flow rate and liquid level of the system.

For further information on control options of the pumps, see section Communication.

10. TPE2

TM075839

TM075842

TPE2 and TPE2 D pumps

Technical data

Flow rate:	Up to 120 m ³ /h
Head:	Up to 25 m
Liquid temperature:	-25 to +120 °C (140 °C for a short period)
Maximum operating pressure:	16 bar
Motor sizes, single-phase:	0.25 to 1.5 kW
Motor sizes, three-phase:	0.25 to 2.2 kW

Construction

Via an external signal from a sensor or a controller, the pumps allow for any configuration and control method required, that is constant pressure, temperature, flow rate or level.

The permanent-magnet motor has a built-in frequency converter for continuous adjustment of the pressure to the flow rate. All pumps are fitted with Grundfos permanent-magnet MGE motors that have motor efficiency class IE5 according to IEC 60034-30-2.

The range is a preset solution for quick and safe installation.

The pumps are available as single-head, TPE2, and twin-head, TPE2 D, pumps.

The pumps have PN 6, PN 10 or PN 16 flanges.

The pumps are fitted with an unbalanced mechanical shaft seal.

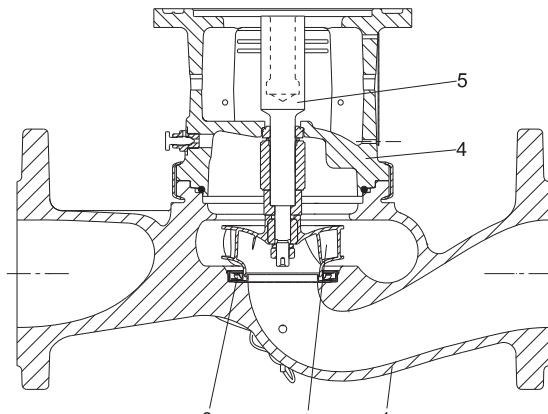

The power head (motor, pump head and impeller) and pump housing are held together by a specially designed clamp. The clamp allows for fast repositioning of the pump housing and fast service of the pump.

The twin-head pumps are designed with two parallel power heads. A flap valve in the common outlet port is opened by the flow of the pumped liquid and prevents backflow of liquid into the idle pump head.

As radial and axial forces are absorbed by the fixed bearing in the motor drive-end, the pump requires no bearing.

Pumps with stainless-steel pump housing, version I, are suitable for hot water recirculation.

5	Stub shaft	Stainless steel	EN 1.4404

Applications

The pumps have integrated speed control for automatic adaptation of performance to current conditions.

The energy consumption is thus kept at a minimum.

The pumps can operate at any duty point within the range between minimum and maximum speed.

TM014916

Duty range of TPE3

Pos.	Description
1	Maximum speed
2	Minimum speed

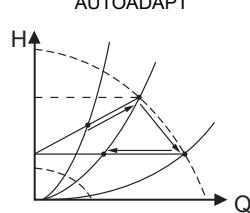

Depending on the application, the pumps offer energy savings, increased comfort or improved processing.

The pumps are suitable for applications requiring pressure control.

AUTOADAPT

TPE3 pumps are factory-set to AUTOADAPT which continuously adapts the pump performance according to the actual system characteristic.

System application	Select this control mode	Pump type
<p>Recommended for most heating systems, especially in systems with relatively large pressure losses in the distribution pipes. See description under proportional pressure.</p> <p>In replacement situations where the proportional-pressure duty point is unknown. The duty point has to be within the AUTOADAPT operating range. During operation, the pump automatically makes the necessary adjustment to the actual system characteristics. This setting ensures minimum energy consumption and low noise level from the valves, and therefore reduces operating costs and increases comfort.</p>	AUTOADAPT	All

The FLOWADAPT control mode is a combination of AUTOADAPT and FLOWADAPT.

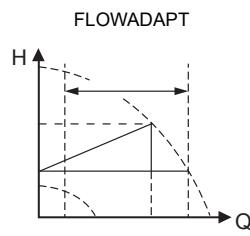

This control mode is suitable for systems where a maximum flow rate limit, FLOWLIMIT, is desired. The pump continuously monitors and adjusts the flow rate, thus ensuring that the selected FLOWLIMIT is not exceeded.

Main pumps in boiler applications where a steady flow through the boiler is required. No extra energy is used for pumping too much liquid into the system.

In systems with mixing loops, the control mode can control the flow rate in each loop.

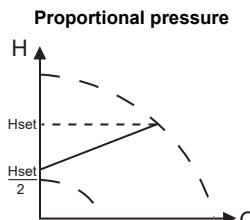

Benefits:

- Enough water for all loops at peak load conditions if each loop has been set to the right maximum flow rate.
- The dimensioned flow rate for each zone, required heat energy, is determined by the flow from the pump.
- This value can be set precisely in the FLOWADAPT control mode without the use of pump throttling valves.
- When the flow rate is set lower than the balancing valve setting, the pump ramps down instead of losing energy by pumping against a balancing valve.
- Cooling surfaces in air-conditioning systems operate at high pressure and low flow rate.

In systems with relatively large pressure losses in the distribution pipes and in air-conditioning and cooling systems.

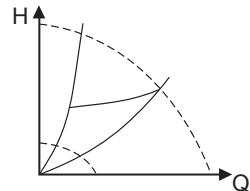

- Two-pipe heating systems with thermostatic valves and the following:
 - very long distribution pipes
 - strongly throttled pipe balancing valves
 - differential-pressure regulators
 - large pressure losses in those parts of the system through which the total quantity of water flows, for example boiler, heat exchanger and distribution pipe up to the first branching.
- Primary circuit pumps in systems with large pressure losses in the primary circuit.
- Air-conditioning systems with the following:
 - heat exchangers (fan coils)
 - cooling ceilings
 - cooling surfaces.

TPE Series 2000	0.12 - 22 kW	-
TPE Series 1000	0.12 - 22 kW	•

Standard control panel

Pos.	Symbol	Description
1	○	Grundfos Eye The indicator light shows the operating status of the pump. See section Priority of settings for further information.
2	-	Light fields for indication of setpoint.
3	△ ▽	Up and down. The buttons change the setpoint.
4	RF	The button allows radio communication with Grundfos GO and other products of the same type. When you try to establish radio communication between the pump and Grundfos GO or another pump, the green indicator light in Grundfos Eye flashes continuously. Press Communication on the pump control panel to allow radio communication with Grundfos GO and other products of the same type.
5	○	The button makes the pump ready for operation and starts and stops the pump. Start: If you press the button when the pump is stopped, the pump only starts if no other functions with higher priority have been enabled. Stop: If you press the button when the pump is running, the pump always stops. The Stop text next to the button is on.

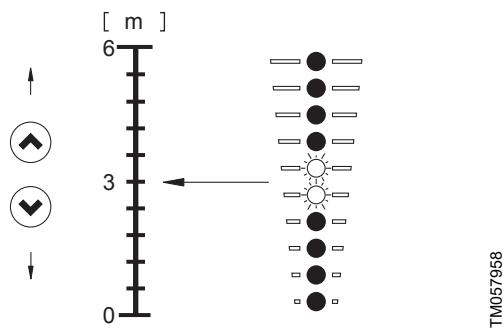

Setpoint setting

Set the desired setpoint of the pump by pressing **Up** or **Down**. The light fields on the control panel indicates the setpoint set.

Pump in differential-pressure control mode

The following example applies to a pump in an application where a pressure sensor gives a feedback to the pump. If you retrofit the sensor to the pump, set it manually as the pump does not automatically register a connected sensor.

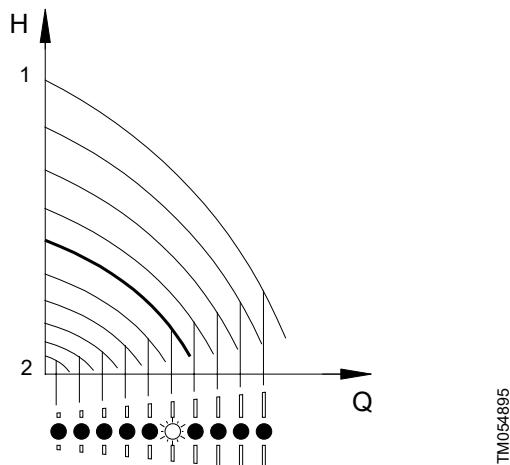

The figure below shows that light fields 5 and 6 are activated, indicating a desired setpoint of 3 m with a sensor measuring range from 0 to 6 m. The setting range is equal to the sensor measuring range.

Setpoint set to 3 m, differential-pressure control

Pump in constant-curve control mode

In constant-curve control mode, the pump performance is between the maximum and minimum curve of the pump.

Pump in constant-curve control mode

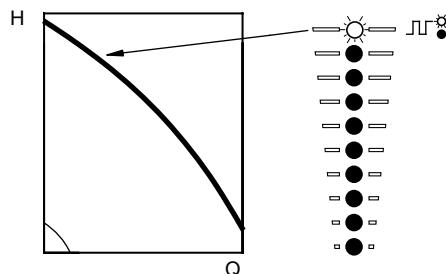

Pos.	Description
1	Max.
2	Min.

Setting to maximum curve:

- Press **Up** continuously to change over to the maximum curve of the pump. The top light field flashes. When the top light field is on, press **Up** for 3 seconds until the light field starts flashing.
- To change back, press **Up** continuously until the desired setpoint is indicated.

Example: Pump set to maximum curve.

The figure below shows that the top light field is flashing, indicating maximum curve.

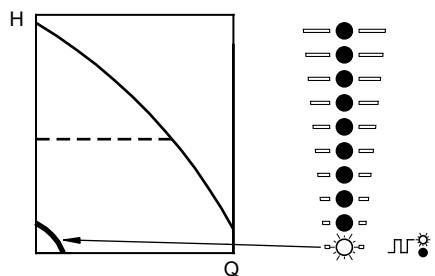

Maximum curve duty

Setting to minimum curve:

- Press **Down** continuously to change over to the minimum curve of the pump. The bottom light field flashes. When the bottom light field is on, press **Down** for 3 seconds until the light field starts flashing.
- To change back, press **Down** continuously until the light field starts flashing.

Example: Pump set to minimum curve.

The figure below shows that the bottom light field is flashing, indicating minimum curve.

Minimum curve duty

Start and stop of pump

Note: If you have stopped the pump by pressing **Start/Stop** and the **Stop** text on the control panel is on, you can only give it free to operation by pressing **Start/Stop** again.

If you have stopped the pump by pressing **Down**, you can restart it by pressing **Up** or by using Grundfos GO.

Start the pump by pressing **Start/Stop** or by continuously pressing **Up** until the desired setpoint is indicated.

Stop the pump by pressing **Start/Stop**. When the pump is stopped, the "Stop" text next to the button will illuminate.

You can also stop the pump by continuously pressing **Down** until none of the light fields are on.

You can also stop the pump with Grundfos GO or via a digital input set to **External stop**.

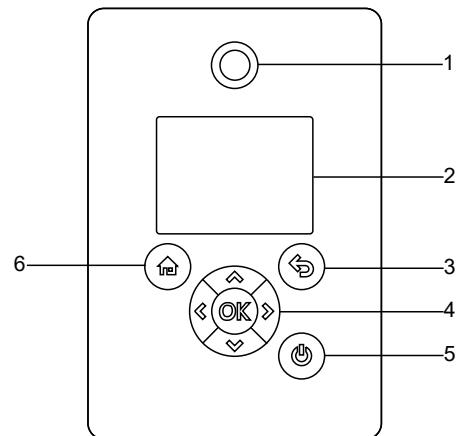

Resetting of fault indications

Reset a fault indication in one of the following ways:

- Via the digital input if it has been set to **Alarm resetting**.
- Briefly press **Up** or **Down** on the pump. This will not change the setting of the pump. You cannot reset a fault indication by pressing **Up** or **Down** if the buttons have been locked.
- Switch off the power supply until the indicator lights are off.
- Switch the external start-stop input off and then on again.
- With Grundfos GO.

3	-	Settings: This menu gives access to all setting parameters. The menu also allows you to make detailed settings.
4	-	Assist: This menu enables assisted setup, provides a short description of the control modes and offers fault-finding advice.
5	↻	Start/Stop: The icon indicates that the product was stopped with the Start/Stop button.
6	■■■	Master: The icon indicates that the product is functioning as the master in a multipump system.
7	■■■	Slave: The icon indicates that the product is functioning as a slave in a multipump system.
8	••	Multioperation: The icon indicates that the product is operating in a multipump system.
9	🔒	Lock: The icon indicates that the possibility to make settings has been disabled for protective reasons.

Startup guide

The pump incorporates a startup guide which is started at the first startup. See section Run startup guide. After the startup guide, the main menus appear in the display.

Grundfos GO

Grundfos GO, up to 11 kW 2-pole and 7.5 kW 4-pole

The pump is designed for wireless radio or infrared communication with Grundfos GO.

Grundfos GO enables setting of functions and gives access to status overviews, technical product information and actual operating parameters.

Grundfos GO offers the following mobile interface, MI.

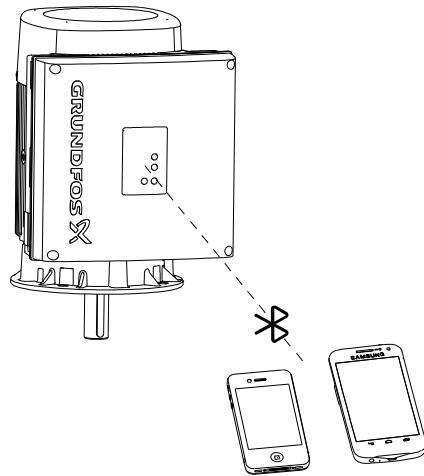

Grundfos GO communicating with the pump via radio or infrared connection, IR

Pos.	Description
	Grundfos MI 301:
1	Separate module enabling radio or infrared communication. You can use the module in conjunction with an Android or iOS-based smart device with Bluetooth connection.

Grundfos GO, from 15-22 kW 2-pole and 11-22 kW 4-pole

The product is designed for wireless communication with Grundfos GO using Bluetooth (BLE).

Grundfos GO enables you to set functions and gives you access to status overviews, technical product information and current operating parameters.

Communication

When Grundfos GO initiates communication with the pump, the indicator light in the middle of Grundfos Eye flashes green. See section Priority of settings.

Furthermore, on pumps fitted with an advanced control panel a text appears in the display saying that a wireless device is trying to establish connection. Press **OK** on the pump in order to establish connection with Grundfos GO or press **Home** to reject connection.

Establish communication using one of these communication types:

- radio communication
- infrared communication
- Bluetooth communication

Description of selected functions

Heat energy monitor

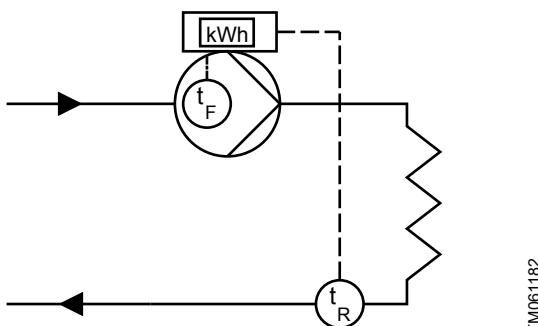

Pump variant	Heat energy monitor
TPE3, TPE3 D	•
TPE2, TPE2 D	-
TPE Series 2000	0.12 - 22 kW
TPE Series 1000	0.12 - 22 kW

The heat energy monitor is a monitoring function that calculates the heat energy consumption within a system. The built-in flow estimation needed for the calculation has an inaccuracy of $\pm 10\%$ of the maximum flow rate in the area down to 10 % flow and down to 12.5 % of the maximum head. The calculations are based on water at a temperature of 20 °C. Also, the temperature measurements needed for the calculation have some inaccuracy depending on the sensor type. Therefore, you cannot use the heat energy value for billing purposes. However, the value is perfect for optimisation purposes in order to prevent excessive energy costs caused by system imbalances.

The heat energy monitor requires an additional temperature sensor installed in the flow pipe or return pipe depending on where the pump is installed.

Use the analog inputs and/or Pt100/1000 inputs for measuring the temperatures used for calculation by the heat energy monitor.

The used inputs must not be set to **Not active** and one of the measuring parameters must be set to **Temperature 2**.

Example: Pump installed in the flow pipe and additional temperature sensor installed in the return pipe

Pos.	Description
t _F	Flow-pipe temperature
t _R	Return-pipe temperature

Setpoint

Pump variant	Setpoint
TPE3, TPE3 D	•
TPE2, TPE2 D	•
TPE Series 2000	0.12 - 22 kW
TPE Series 1000	0.12 - 22 kW

When you have selected the desired control mode, set the setpoint.

You can set the setpoint for all control modes, except AUTOADAPT and FLOWADAPT, in this submenu when you have selected the desired control mode. See section Control mode.

Factory setting

See section Factory settings of E-pumps.

Related information

Control mode

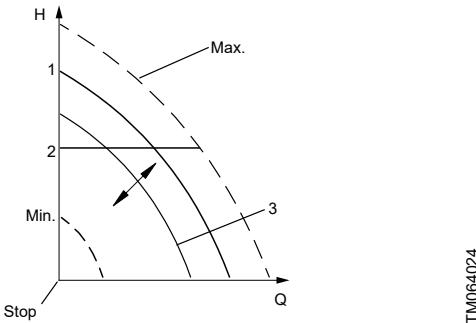

14. Factory settings of E-pumps

Operating mode

Pump variant	Operating mode
TPE3, TPE3 D	•
TPE2, TPE2 D	•
TPE Series 2000	0.12 - 22 kW
TPE Series 1000	0.12 - 22 kW

Possible operating modes

Normal	The product runs according to the selected control mode.
Stop	The product stops.
Min.	The product runs at minimum speed. You can use the minimum curve mode in periods in which a minimum flow is required. When operating according to the minimum curve, the pump is operating like an uncontrolled pump.
Max.	The product runs at maximum speed. You can use the maximum curve mode in periods in which a maximum flow is required. When operating according to the maximum curve, the pump is operating like an uncontrolled pump.
Manual	The product is operating at a manually set speed, and the setpoint via bus and setpoint influence function are overruled.
User-defined speed	The product is operating at a speed set by the user.

Pos.	Description
1	Normal
2	Normal
3	Manual

Set manual speed

Pump variant	Set manual speed
TPE3, TPE3 D	•
TPE2, TPE2 D	•
TPE Series 2000	0.12 - 22 kW
TPE Series 1000	0.12 - 22 kW

The function is only available in the HMI 300 and 301 operating panels.

Use this function to set the speed in percentage of the maximum speed. When you have set the operating mode to **Manual**, the product starts running at the set speed.

With Grundfos GO, you can set the speed via the **Setpoint** menu.

User-defined speed

Use this function to set the motor speed in percentage of the maximum speed. When you have set the operating mode to **User-defined speed**, the pump starts running at the set speed.

Control mode

Pump variant	Control mode
TPE3, TPE3 D	•
TPE2, TPE2 D	•
TPE Series 2000	0.12 - 22 kW
TPE Series 1000	0.12 - 22 kW

Note: Not all control modes are available for all pump variants.

Possible control modes:

- **AUTOADAPT**
- **FLOWADAPT**
- **Prop. pressure** (proportional pressure)
- **Const. pressure** (constant pressure)
- **Const. temp.** (constant temperature)
- **Con. diff. press.** (constant differential pressure)
- **Con. diff. temp.** (constant differential temperature)
- **Const. flow rate** (constant flow rate)
- **Const. level** (constant level)
- **Const. other val.** (constant other value)
- **Const. curve** (constant curve).

You can change the setpoint for all control modes, except **AUTOADAPT** and **FLOWADAPT**, in the **Setpoint** submenu under **Settings** when you have selected the desired control mode.

Factory setting

See Factory settings of E-pumps.

Related information

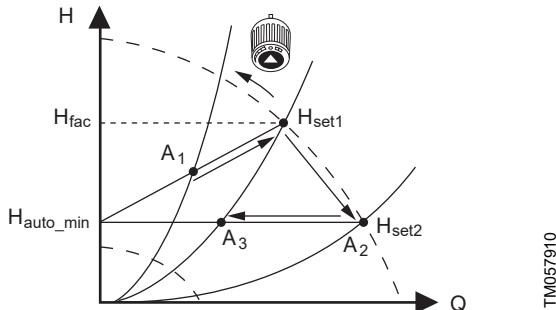

[14. Factory settings of E-pumps](#)

AUTOADAPT

Pump variant	AUTOADAPT
TPE3, TPE3 D	•
TPE2, TPE2 D	-
TPE Series 2000	0.12 - 22 kW
TPE Series 1000	0.12 - 22 kW

The AUTOADAPT control mode continuously adapts the pump performance according to the actual system characteristic.

Manual setting of the setpoint is not possible.

AUTOADAPT

When the AUTOADAPT control mode has been enabled, the pump will start with the factory setting, H_{fac} is equal to H_{set1} , and then adjust its performance to A_1 . See the figure above.

When the pump registers a lower head on the maximum curve, A_2 , the AUTOADAPT function automatically selects a correspondingly lower control curve, H_{set2} . If the valves in the system close, the pump adjusts its performance to A_3 .

- A₁: Original duty point.
- A₂: Lower registered head on the maximum curve.
- A₃: New duty point after AUTOADAPT control.
- H_{set1} : Original setpoint setting.
- H_{set2} : New setpoint after AUTOADAPT control.
- H_{fac} : Factory setting.
- H_{auto_min} : A fixed value of 1.5 m.

The AUTOADAPT control mode is a form of proportional-pressure control where the control curves have a fixed origin, H_{auto_min} .

The AUTOADAPT control mode has been developed specifically for heating systems and we do not recommend that you use it for air-conditioning and cooling systems.

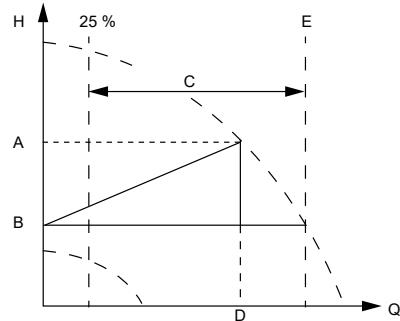

FLOWADAPT

Pump variant	FLOWADAPT
TPE3, TPE3 D	•
TPE2, TPE2 D	-
TPE Series 2000	0.12 - 22 kW
TPE Series 1000	0.12 - 22 kW

When you select FLOWADAPT, the pump runs AUTOADAPT and ensures that the flow rate never exceeds the entered FLOWLIMIT value.

The setting range for FLOWLIMIT is 25 to 90% of the maximum flow rate of the pump.

The factory setting of the FLOWLIMIT is the flow rate where the AUTOADAPT factory setting meets the maximum curve.

FLOWADAPT

Pos.	Description
A	H_{fac}
B	H_{auto_min}
C	Setting range
D	Q_{fac}
E	90% Q_{max}

Proportional pressure

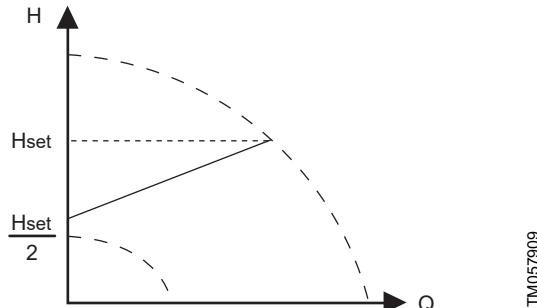

Pump variant	Proportional pressure
TPE3, TPE3 D	•
TPE2, TPE2 D	-
TPE Series 2000	0.12 - 22 kW
TPE Series 1000	0.12 - 22 kW

The head of the pump is reduced at decreasing water demand and increased at rising water demand. See the figure below.

This control mode is especially suitable in systems with relatively large pressure losses in the distribution pipes. The head of the pump increases proportionally to the flow in the system to compensate for the large pressure losses in the distribution pipes.

You can set the setpoint with an accuracy of 0.1 m. The head against a closed valve is half the setpoint. The setting range is between 25 % and 90 % of maximum head.

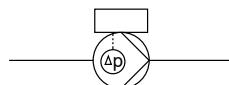

For more information about settings, see section on proportional-pressure setup.

Proportional pressure

Example

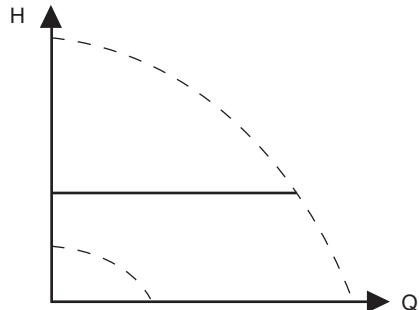

- Factory-fitted differential-pressure sensor.

Constant pressure

Pump variant	Constant pressure
TPE3, TPE3 D	•
TPE2, TPE2 D	•
TPE Series 2000	0.12 - 22 kW
TPE Series 1000	0.12 - 22 kW

We recommend this control mode if the pump is to deliver a constant pressure, independently of the flow in the system. The pump maintains a constant pressure independently of the flow rate.

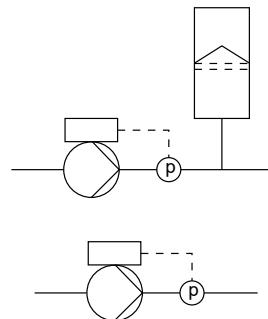

TM05701

Constant pressure

This control mode requires an external pressure sensor as shown in the examples below. You can set the pressure sensor in the **Assist** menu. See the section on assisted pump setup. The setting range is between 12.5 % and 100 % of maximum head.

Example:

- One external pressure sensor

TM057881

TM057882

Controller settings

For recommended controller settings, see section Controller (Controller settings).

Related information

- [Controller \(Controller settings\)](#)
[Proportional-pressure setup](#)

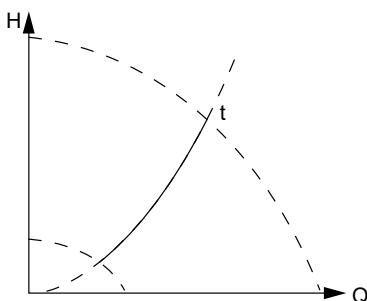

Related information

- [Controller \(Controller settings\)](#)
[Assisted pump setup](#)

Constant temperature

Pump variant	Constant temperature
TPE3, TPE3 D	•
TPE2, TPE2 D	•
TPE Series 2000	0.12 - 22 kW
TPE Series 1000	0.12 - 22 kW

This control mode ensures a constant temperature. Constant temperature is a comfort control mode that you can use in hot water recirculation systems to control the flow rate to maintain a fixed temperature in the system.

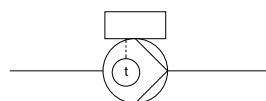

Constant temperature

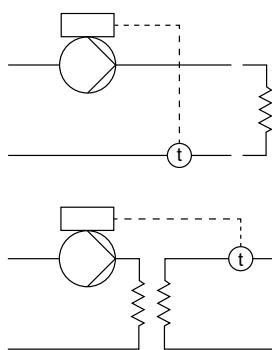

This control mode requires either an internal or external temperature sensor as shown in the examples below.

Example:

- Factory-fitted temperature sensor. Only TPE3, TPE3 D

- One external temperature sensor

Controller settings

For recommended controller settings, see section Controller (Controller settings).

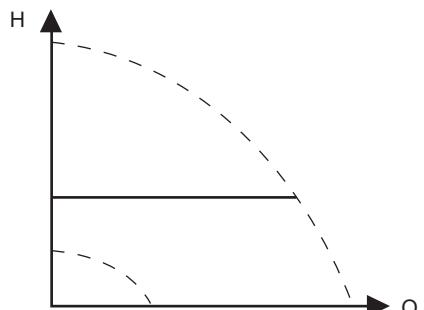

Related information

[Controller \(Controller settings\)](#)

Constant differential pressure

Pump variant	Constant differential pressure
TPE3, TPE3 D	•
TPE2, TPE2 D	•
TPE Series 2000	0.12 - 22 kW
TPE Series 1000	0.12 - 22 kW

The pump maintains a constant differential pressure, independently of the flow rate in the system. See the figure below. This control mode is primarily suitable for systems with relatively small pressure losses.

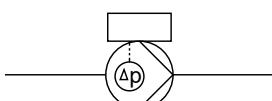

Constant differential pressure

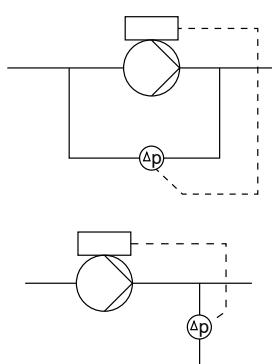

The setting range is between 12.5 % and 100 % of maximum head. This control mode requires either an internal or external differential-pressure sensor or two external pressure sensors as shown in the examples below.

Examples:

- Factory-fitted differential-pressure sensor. Only TPE3, TPE3 D and TPE, TPED Series 2000.

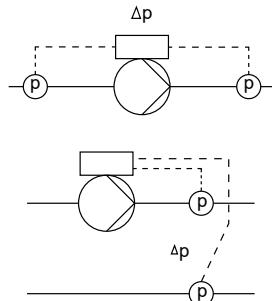

- One external differential-pressure sensor. The pump uses the input from the sensor to control the differential pressure. You can set the sensor manually or by using the **Assist** menu. See the section on assisted pump setup.

- Two external pressure sensors.

Constant differential-pressure control is achievable with two individual pressure sensors. The pump uses the inputs from the two sensors and calculates the differential pressure.

The sensors must have the same unit and must be set as feedback sensors. You can set the sensors manually, sensor by sensor, or by using the **Assist** menu. See the section on assisted pump setup.

Constant differential temperature

Pump variant	Constant differential temperatur
TPE3, TPE3 D	•
TPE2, TPE2 D	•
TPE Series 2000 0.12 - 22 kW	•
TPE Series 1000 0.12 - 22 kW	•

The pump maintains a constant differential temperature in the system and the pump performance is controlled according to this.

TM057954

Constant differential temperature

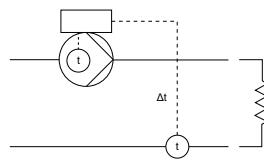

This control mode requires either two temperature sensors or one external differential-temperature sensor. See the examples below.

The temperature sensors can either be analog sensors connected to two of the analog inputs or two Pt100/Pt1000 sensors connected to the Pt100/1000 inputs, if these are available on the specific pump.

Set the sensor in the **Assist** menu under **Assisted pump setup**. See the section on assisted pump setup.

Examples:

- Factory-fitted temperature sensor and an external temperature sensor. Only TPE3, TPE3 D.

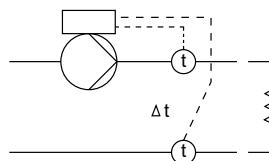

TM057891

- Two external temperature sensors.

Constant differential-temperature control is achievable with two temperature sensors. The pump uses the inputs from the two sensors and calculates the differential temperature.

The sensors must have the same unit and must be set as feedback sensors. You can set the sensors manually, sensor by sensor, or by using the **Assist** menu. See the section on assisted pump setup.

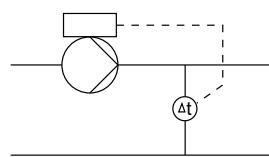

TM057894

- One external differential-temperature sensor.

The pump uses the input from the sensor to control the differential temperature.

You can set the sensor manually or by using the **Assist** menu. See the section on assisted pump setup.

TM057951

Controller settings

For recommended controller settings, see section Controller (Controller settings).

Constant flow rate

Pump variant	Constant flow rate
TPE3, TPE3 D	•
TPE2, TPE2 D	•
TPE Series 2000	0.12 - 22 kW
TPE Series 1000	0.12 - 22 kW

The pump maintains a constant flow rate in the system, independently of the head.

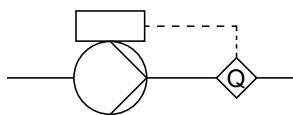

TM057955

Constant flow rate

This control mode requires an external flow sensor. See the example below.

Example:

- One external flow sensor.

TM057895

Constant flow rate

TPE3 is able to perform constant flow control based on internal flow estimation without using a flow sensor.

The Grundfos sensor must in this case be set to Other instead of Feedback and the control mode must be Constant flow.

The built-in flow estimation needed for the calculation has an inaccuracy of $\pm 10\%$ of the maximum flow rate in the area down to 10 % flow and down to 12.5 % of the maximum head.

Controller settings

For recommended controller settings, see section Controller (Controller settings).

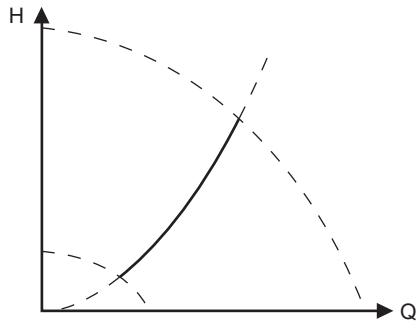

Related information

[Controller \(Controller settings\)](#)

Constant level

Pump variant	Constant level
TPE3, TPE3 D	•
TPE2, TPE2 D	•
TPE Series 2000	0.12 - 22 kW
TPE Series 1000	0.12 - 22 kW

The pump maintains a constant level, independently of the flow rate.

TM057941

Constant level

This control mode requires an external level sensor. The pump can control the level in a tank in two ways:

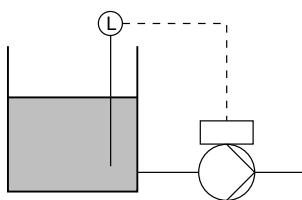

- As an emptying function where the pump draws the liquid from the tank.
- As a filling function where the pump pumps the liquid into the tank.

See the figure below.

The type of level control function depends on the setting of the built-in controller.

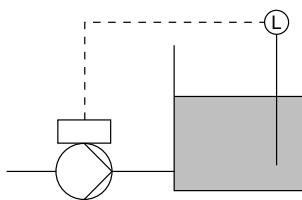

Example:

- One external level sensor with emptying function.

TM057896

- One external level sensor with filling function.

TM057965

Controller settings

For recommended controller settings, see section Controller (Controller settings).

Constant other value

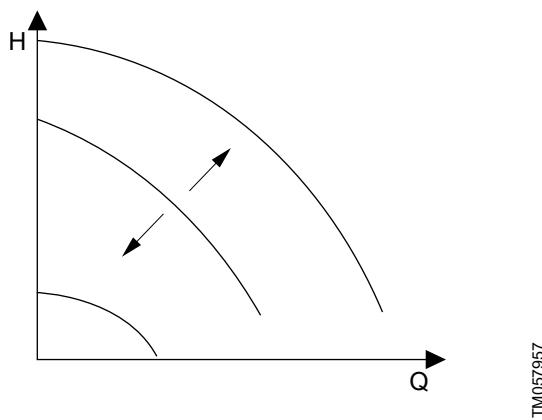

Pump variant	Constant other value
TPE3, TPE3 D	•
TPE2, TPE2 D	•
TPE Series 2000	0.12 - 22 kW
TPE Series 1000	0.12 - 22 kW

Use this control mode to control a value which is not available in the **Control mode** menu. To measure the controlled value, connect a sensor to one of the analog inputs. The controlled value is shown in percentage of the sensor range.

Constant curve

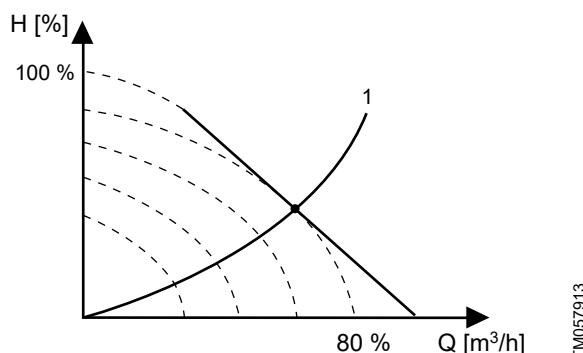

Pump variant	Constant curve
TPE3, TPE3 D	•
TPE2, TPE2 D	•
TPE Series 2000	0.12 - 22 kW
TPE Series 1000	0.12 - 22 kW

Use this control mode to control the motor speed. You can set the pump to operate according to a constant curve, like an uncontrolled pump. See the figure below.

Constant curve

Depending on the system characteristic and the duty point, the 100 % setting may be slightly smaller than the actual maximum curve of the pump even though the display shows 100 %. This is due to the power limitations built into the pump. The deviation varies according to pump type and pressure loss in the pipes.

Power limitation influencing the maximum curve

Pos.	Description
1	Limited maximum curve

Controller settings

For recommended controller settings, see section Controller (Controller settings).

Related information

[Controller \(Controller settings\)](#)

Proportional-pressure setup

Pump variant	Proportional-pressure setup
TPE3, TPE3 D	•
TPE2, TPE2 D	-
TPE Series 2000	0.12 - 22 kW
TPE Series 1000	0.12 - 22 kW

Control-curve function

You can set the curve either to quadratic or linear.

Zero-flow head

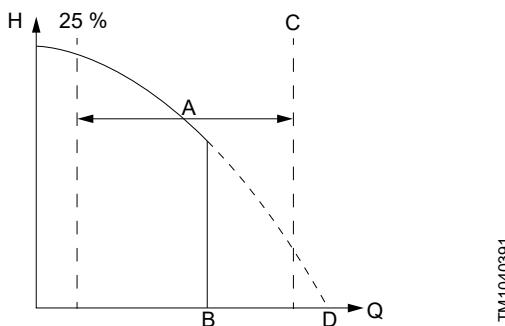

You can set this value in % of the setpoint. With a setting of 100 %, the control mode is equal to constant differential pressure.

FLOWLIMIT

Pump variant	FLOWLIMIT
TPE3, TPE3 D	•
TPE2, TPE2 D	-
TPE Series 2000	0.12 - 22 kW
TPE Series 1000	0.12 - 22 kW

FLOWLIMIT

- Enable the FLOWLIMIT function.
- Set the FLOWLIMIT.

FLOWLIMIT

Pos.	Description
A	Setting range
B	Q_{limit}
C	90% Q_{max}
D	Q_{max}

You can combine the FLOWLIMIT function with the following control modes:

- Proportional pressure
- Constant differential pressure
- Constant differential temperature
- Constant temperature
- Constant curve.

A flow-limiting function ensures that the flow rate never exceeds the entered FLOWLIMIT value.

The setting range for FLOWLIMIT is 25 % to 90 % of the Q_{max} of the pump.

The factory setting of the FLOWLIMIT is the flow rate where the AUTOADAPT factory setting meets the maximum curve.

Related information

[FLOWADAPT](#)

Automatic night setback

Pump variant	Automatic night setback
TPE3, TPE3 D	•
TPE2, TPE2 D	-
TPE Series 2000	0.12 - 22 kW
TPE Series 1000	0.12 - 22 kW

Once you have enabled automatic night setback, the pump automatically changes between normal duty and night setback, duty at low performance.

Changeover between normal duty and night setback depends on the flow-pipe temperature.

The pump automatically changes over to night setback when the built-in sensor registers a flow-pipe temperature drop of more than 10 to 15 °C within approximately two hours. The temperature drop must be at least 0.1 °C/min.

Changeover to normal duty takes place without a time lag when the temperature has increased by approximately 10 °C.

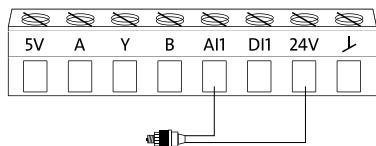

Note: You cannot enable automatic night setback when the pump is in constant-curve mode.

Analog inputs

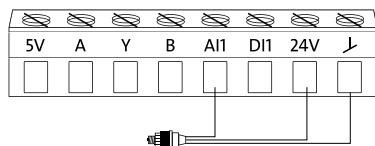

Pump variant	Analog inputs
TPE3, TPE3 D	•
TPE2, TPE2 D	•
TPE Series 2000	0.12 - 22 kW
TPE Series 1000	0.12 - 22 kW

Wiring examples:

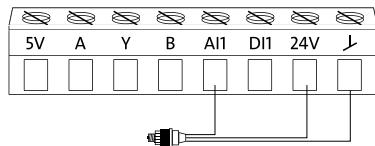

These connection scenarios are also valid for connection to analog input 2 and analog input 3.

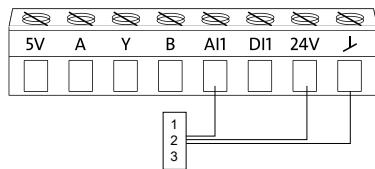

2-wire sensor, 0/4-20 mA

3-wire sensor, 0/4-20 mA

3-wire sensor, 0.5 - 3.5 V, 0-5 V, 0-10 V

Setpoint influence, 0.5 - 3.5 V, 0-5 V, 0-10 V; 0/4-20 mA

Pos.	Description
1	Potentiometer
2	PLC
3	External controller

To set the input, make the settings below:

Function

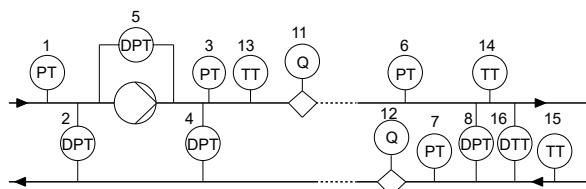

You can set the inputs to these functions:

- **Not active**
- **Feedback sensor**
The sensor is used for the selected control mode.
- **Setpoint influence**
The input signal is used for influencing the setpoint.
- **Other function**

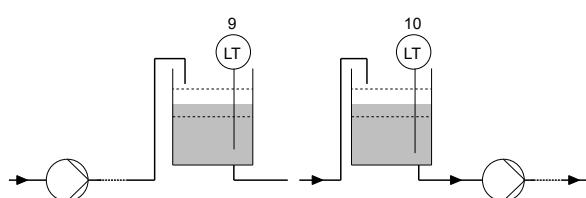

The sensor input is used for measurement or monitoring.

Measured parameter

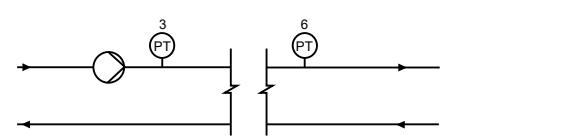

Select one of the below parameters to be measured in the system by the sensor connected to the input.

TMW083181

TMW083182

TMW083188

TMW075207

Pos.	Sensor function/measured parameter

Setting two sensors for differential measurement

In order to measure the difference of a parameter between two points, set the corresponding sensors as follows:

Parameter	Analog input for sensor 1	Analog input for sensor 2
Pressure, option 1	Differential pressure, inlet	Differential pressure, outlet
Pressure, option 2	Pressure 1, external	Pressure 2, external
Flow	Pump flow	Flow, external
Temperature	Temperature 1	Temperature 2

If you want to use the control mode **Constant differential pressure**, you must choose the function **Feedback sensor** for the analog input of both sensors.

Built-in Grundfos sensor

Pump variant	Built-in Grundfos sensor
TPE3, TPE3 D	•
TPE2, TPE2 D	-
TPE Series 2000	0.12 - 22 kW
TPE Series 1000	0.12 - 22 kW

You can select the function of the built-in sensor in the **Built-in Grundfos sensor** menu.

Set the **Built-in Grundfos sensor** via the **Assisted pump setup** menu. See the section on assisted pump setup.

If you perform the setting manually in the advanced operating panel, you must enter the **Analog inputs** menu under the **Settings** menu to access the **Built-in Grundfos sensor** menu.

If you perform the setting manually via Grundfos GO, you need to enter the menu for the **Built-in Grundfos sensor** under the **Settings** menu.

Function

You can set the built-in sensor to the following functions:

- **Grundfos diff.-pressure sensor**
 - Not active
 - Feedback sensor
 - Setpoint influence
 - Other function.

Factory setting

See section Factory settings of E-pumps.

TPE3, TPE3 D	•
TPE2, TPE2 D	•
TPE Series 2000	0.12 - 22 kW
TPE Series 1000	0.12 - 22 kW

Wiring example:

TM083189

Pt100/1000

To set the input, choose one of the below settings.

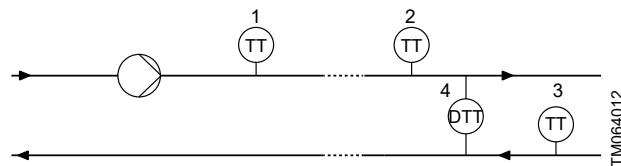

Function

You can set the inputs to these functions:

- **Not active**
When set to **Not active**, the input has no function.
- **Feedback sensor**
The sensor is used for the selected control mode.
- **Setpoint influence**
The input signal is used for influencing the setpoint.
- **Other function**
The sensor input is used for measurement or monitoring.

Measured parameter

Select one of the below parameters to be measured in the system by the sensor connected to the input.

TM06402

Pos.	Sensor function/measured parameter
1	Liquid temp.
2	Temperature 1
3	Temperature 2
4	Differential temp.
Not shown	Ambient temp.

Measuring range

-50 to +204 °C.

Factory setting

See section Factory settings of E-pumps.

[14. Factory settings of E-pumps](#)

Digital inputs

Pump variant	Digital inputs
TPE3, TPE3 D	•
TPE2, TPE2 D	•
TPE Series 2000	0.12 - 22 kW
TPE Series 1000	0.12 - 22 kW

Wiring example:

TM083189

Digital input

To set the input, make the settings below:

Function

You can set the inputs to these functions:

- **Not active**
When set to **Not active**, the input has no function.
- **Ext. stop**
When the input is deactivated, open circuit, the motor stops.
- **Min. (minimum speed)**
When the input is activated, the motor runs at the set minimum speed.
- **Max. (maximum speed)**
When the input is activated, the motor runs at the set maximum speed.
- **User defined speed**
When the input is activated, the motor runs at a speed set by the user.
- **External fault**
When the input is activated, a timer is started. If the input is activated for more than 5 seconds, the motor stops and a fault is indicated. The function depends on input from external equipment.
- **Alarm resetting**
When the input is activated, a fault indication, if any, is reset.
- **Dry running**
When this function is selected, a lack of inlet pressure or water shortage (dry running) can be detected.
When this happens, the pump stops. The pump cannot restart as long as the input is activated. This requires the use of an accessory such as these:
 - a pressure switch installed on the inlet side of the pump
 - a float switch installed on the inlet side of the pump.
- **Accumulated flow**
When this function is selected, the accumulated flow can be registered. This requires the use of a flowmeter which can give a feedback signal as a pulse per defined volume of water.
- **Reverse rotation**

This function reverses the direction of rotation of the motor.

- Predefined setpoint 1**

The function applies only to digital input 2.

When you set digital inputs to a predefined setpoint, the pump operates according to a setpoint based on a combination of the activated digital inputs.

- Activate output**

When this function is selected, the related digital output is activated. This is done without any changes to pump operation.

- Local motor stop**

When the function is selected, the given motor in a multimotor system setup stops without affecting the performance of the other motors in the system.

The priority of the selected functions are interdependent.

A stop command always has the highest priority.

Activation of digital inputs

You can set the digital inputs to trigger on either Closed contact or Open contact. Selecting the trigger function can only be set via Grundfos GO Link.

The digital inputs can be activated either as active low or active high.

The digital inputs will react as described in the table below:

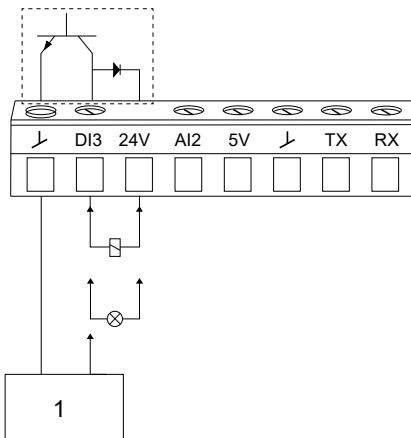

Activate/ Closed contact	Deactivate/Open contact
GND/0V	Floating/3-24V

Digital inputs/outputs

Pump variant	Digital inputs/outputs
TPE3, TPE3 D	•
TPE2, TPE2 D	•
TPE Series 2000	0.12 - 22 kW
TPE Series 1000	0.12 - 22 kW

You can select whether the interface is to be used as an input or output. The output is an open collector. You can connect the open collector to, for example, an external relay or a controller such as a PLC.

Wiring example:

TM083187

Digital output, open collector

Pos.	Description
1	External controller

Mode

You can set the digital input or output 3 and 4 to act as a digital input or digital output.

Functions if the digital input or output is set to input:

- Not active
- Ext. stop
- Min.
- Max.
- User defined speed
- External fault
- Alarm resetting
- Dry running
- Accumulated flow
- Reverse rotation
- Predefined setpoint 2 (digital input/output 3)
- Predefined setpoint 3 (digital input/output 4)
- Local motor stop
- Activate output

Functions if the digital input or output is set to output:

- Not active
- Ready

- Alarm
- Operation
- Pump running
- Warning
- Limit 1 exceeded
- Limit 2 exceeded
- Digital input 1, state
- Digital input 2, state
- Digital input 3, state
- Digital input 4, state

Activation delay

Pump variant	Activation delay
TPE3, TPE3 D	•
TPE2, TPE2 D	•
TPE Series 2000	0.12 - 22 kW
TPE Series 1000	0.12 - 22 kW

The activation delay (T1) is the time between the digital signal and the activation of the selected function.

Range: 0 to 6000 seconds.

Duration time

Available modes:

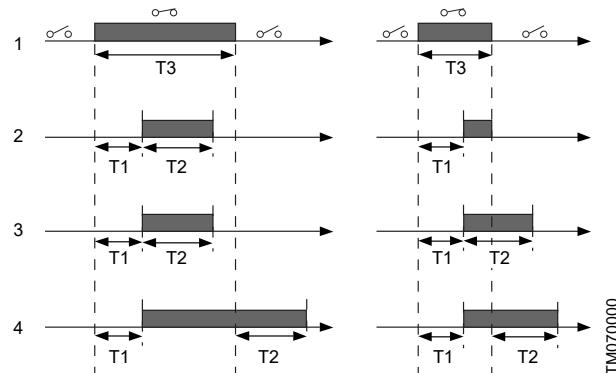

- Not active
- Active with interrupt
- Active without interrupt
- Active with after-run.

The duration time (T2) is the time which, together with the mode, determines how long the selected function is active.

Range: 0 - 15,000 seconds.

$T_3 > T_1 + T_2$

$T_3 < T_1 + T_2$

Pos.	Description
1	Digital input.
2	Active with interrupt.
3	Active without interrupt.
4	Active with after-run.
T1	Activation delay.
T2	Duration time.
T3	The period of time when the digital input is activated.

Factory setting

See section Factory settings of E-pumps.

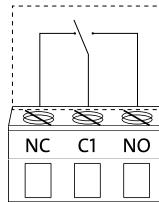

Related information

14. Factory settings of E-pumps

Signal relay (Relay outputs)

Pump variant	Relay outputs	
	Signal relay 1	Signal relay 2
TPE3, TPE3 D	•	•
TPE2, TPE2 D	•	•
TPE Series 2000	0.12 - 22 kW	•
TPE Series 1000	0.12 - 22 kW	•

Wiring example:

TM083188

Relay output

Functions

You can configure the signal relays to be activated when the product changes to one of the following states:

- **Not active**
The relay has been deactivated.
- **Ready**
The motor may be running or is ready to run, and no alarms are active.
- **Alarm**
There is an active alarm, and the motor is stopped.
- **Operating (Operation)**
Operating equals **Running**, but the motor is still in operation when it is stopped, for example, by the **Stop function** or **Limit exceeded**.
- **Running (Pump running)**
The motor shaft is rotating.
- **Warning**
There is an active warning.
- **Limit 1 exceeded**
When you have set this function and the limit is exceeded, the signal relay is activated.
- **Limit 2 exceeded**
When you have set this function and the limit is exceeded, the signal relay is activated.
- **External fan control (Control of external fan)**
When you select this function, the relay is activated if the internal temperature of the motor electronics reaches a preset limit value. In this way the relay activates external cooling to add additional cooling to the motor.
- **Digital input 1, state**

Follow digital input 1. If digital input 1 is triggered, the digital output is also triggered.

- Digital input 2, state**

Follow digital input 2. If digital input 2 is triggered, the digital output is also triggered.

- Digital input 3, state**

Follow digital input 3. If digital input 3 is triggered, the digital output is also triggered.

- Digital input 4, state**

Follow digital input 4. If digital input 4 is triggered, the digital output is also triggered.

Factory setting

Analog output

Pump variant	Analog output
TPE3, TPE3 D	•
TPE2, TPE2 D	•
TPE Series 2000	0.12 - 22 kW
TPE Series 1000	0.12 - 22 kW

The inputs and outputs available depend on the functional module fitted in the motor.

Wiring example:

TM083185

Analog output, 0/4-20 mA, 0-10 V

The analog output enables external control systems to read specific operating data.

To set the analog output, make the following settings.

Output signal

Possible signal types:

- 0-10 V
- 0-20 mA
- 4-20 mA.

Function of analog output

Actual speed		
0 %	100 %	200 %
0 V	10 V	10 V
	5 V	
0 mA	20 mA	20 mA
	10 mA	
4 mA	20 mA	20 mA
	12 mA	

Sensor value		
Minimum	0 V	10 V
0 mA	20 mA	20 mA
4 mA	20 mA	20 mA
Resulting setpoint		
0 %	100 %	100 %
0 V	10 V	10 V
0 mA	20 mA	20 mA
4 mA	20 mA	20 mA
Motor load		
0 %	100 %	100 %
0 V	10 V	10 V
0 mA	20 mA	20 mA
4 mA	20 mA	20 mA
Motor current		
0 %	100 %	200 %
0 V	5 V	10 V
0 mA	10 mA	20 mA
4 mA	12 mA	20 mA
Limit-exceeded function		
Output not active	0 V	10 V
0 mA	20 mA	20 mA
4 mA	20 mA	20 mA

Factory setting

[14. Factory settings of E-pumps](#)

Controller (Controller settings)

Pump variant	Controller settings
TPE3, TPE3 D	•
TPE2, TPE2 D	•
TPE Series 2000	0.12 - 22 kW
TPE Series 1000	0.12 - 22 kW

The pumps have a factory default setting of gain (K_p) and integral time (T_i).

However, if the factory setting is not the optimum setting, you can change the gain and the integral time:

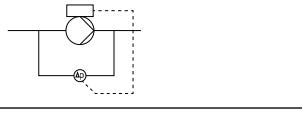

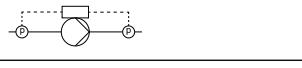

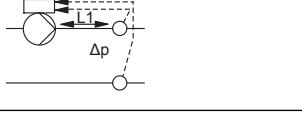

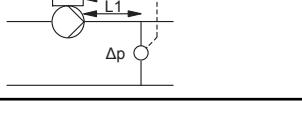

- Set the gain within the range from 0.1 to 20.
- Set the integral-action time within the range from 0.1 to 3600 seconds. If you select 3600 seconds, the controller functions as a P controller.

Furthermore, you can set the controller to inverse control.

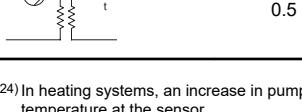

This means that if you increase the setpoint, the speed is reduced. In the case of inverse control, you must set the gain within the range from -0.1 to -20.

Guidelines for setting of PI controller

The tables below show the recommended controller settings:

Constant differential pressure	K_p	T_i
	0.5	0.5
	0.5	0.5
	0.5	L1 < 5 m: 0.5 L1 > 5 m: 3 L1 > 10 m: 5
	0.5	0.5

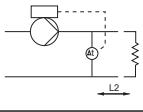

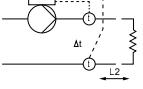

L1: Distance in metres between the pump and the sensor.

Constant temperature	K_p	Heating system ²⁴⁾	Cooling system ²⁵⁾	T_i
	0.5	-0.5	10 + 5L2	
	0.5	-0.5	30 + 5L2	

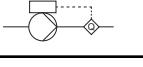

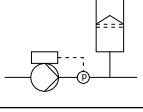

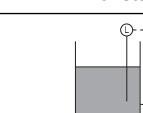

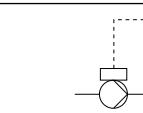

²⁴⁾ In heating systems, an increase in pump performance results in a rise in temperature at the sensor.

²⁵⁾ In cooling systems, an increase in pump performance results in a drop in temperature at the sensor.

L2: Distance in metres between the heat exchanger and the sensor.

Constant differential temperature	K_p	T_i
	-0.5	10 + 5L2
		

L2: Distance in metres between the heat exchanger and the sensor.

Constant flow rate	K_p	T_i
	0.5	0.5
Constant pressure	K_p	T_i
	0.5	0.5
Constant level	K_p	T_i
	-10	0
	10	0

General rules of thumb:

If the controller is too slow-reacting, increase the gain.

If the controller is hunting or unstable, dampen the system by reducing the gain or increasing the integral time.

Factory setting

See section Factory settings of E-pumps.

External setpoint function

Pump variant	External setpoint function
TPE3, TPE3 D	•
TPE2, TPE2 D	•
TPE Series 2000	0.12 - 22 kW
TPE Series 1000	0.12 - 22 kW

Use this function to influence the setpoint by an external signal via one of the analog inputs.

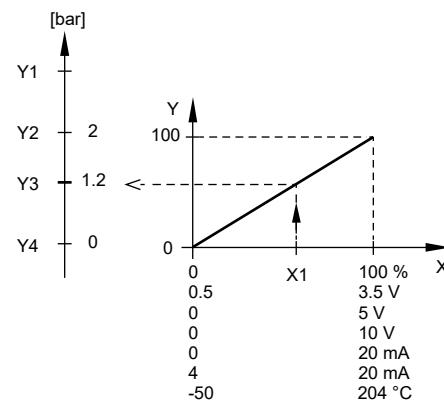

To enable the function, set one of the analog inputs or Pt100/1000 inputs to **Setpoint influence** with Grundfos GO or to **Ext. setpoint infl.** with the HMI 300 or 301 operating panel.

Example of setpoint influence in control mode Const. pressure

Actual setpoint: actual input signal \times setpoint.

At a setpoint of 2 bar and an external setpoint of 60 %, the actual setpoint is $0.60 \times 2 = 1.2$ bar.

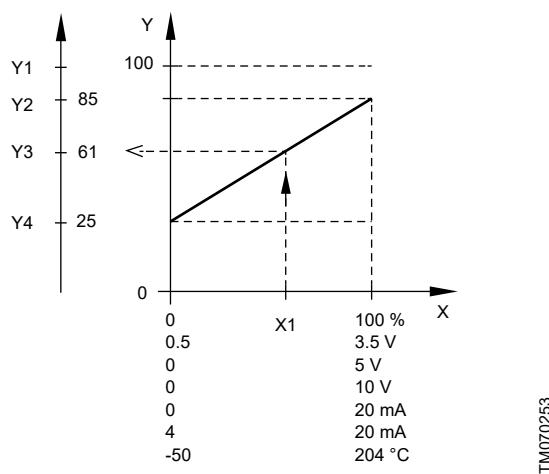

Pos.	Description
X:	External input signal from 0 to 100 %
Y:	Setpoint influence from 0 to 100 %
X1:	Actual input signal, 60 %
Y1:	Sensor maximum [bar]
Y2:	Setpoint [bar]
Y3:	Actual setpoint [bar]
Y4:	Sensor minimum [bar]

Example of a constant curve with linear influence function

Actual setpoint: actual input signal \times (setpoint - user-set minimum speed) + user-set minimum speed.

At a user-set minimum speed of 25 %, a setpoint of 85 % and an external setpoint of 60 %, the actual setpoint is $0.60 \times (85 - 25) + 25 = 61$ %.

Pos.	Description
X:	External input signal from 0 to 100 %
Y:	Setpoint influence from 0 to 100 %
X1:	Actual input signal, 60 %
Y1:	Fixed maximum speed in percentage
Y2:	Setpoint speed in percentage
Y3:	Actual setpoint speed in percentage
Y4:	User-set minimum speed in percentage

Factory setting

Setpoint influence

Pump variant	Setpoint influence
TPE3, TPE3 D	•
TPE2, TPE2 D	•
TPE Series 2000	0.12 - 11 kW
TPE Series 1000	0.12 - 22 kW

The table below gives an overview of the types of setpoint influence and the availability depending on pump type.

Type of setpoint influence	Pump type		
	TPE3	TPE Series 2000	TPE Series 1000
	0.12 - 22 kW	0.12 - 22 kW	0.12 - 22 kW
Not active	•	•	•
Linear function	•	•	•
Linear with Stop	•	•	•
Influence table	•	•	•

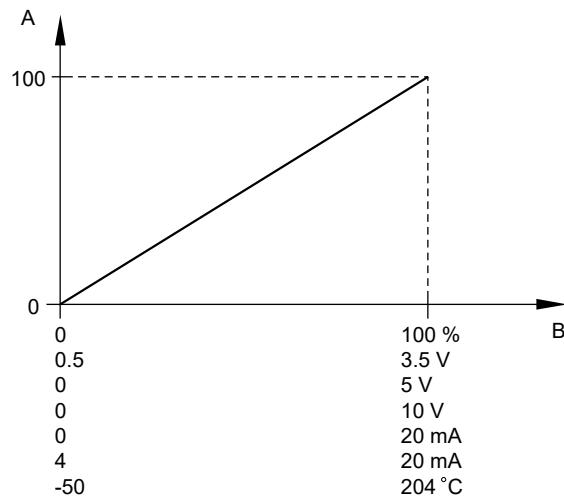

You can select these functions:

- **Not active**

When set to **Not active**, the setpoint is not influenced from any external function.

- Linear function

The setpoint is influenced linearly from 0 to 100 %. See the figure below.

Linear function

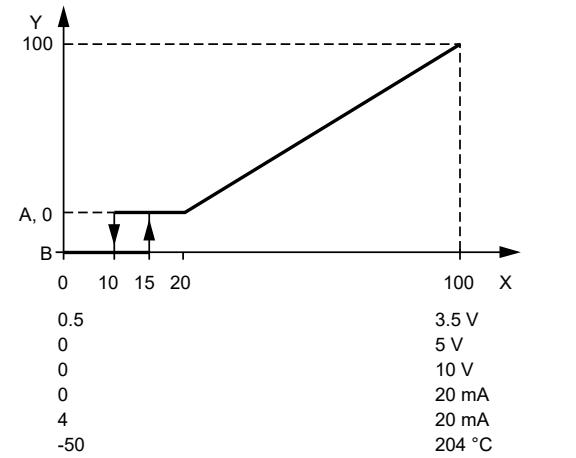

Pos.	Description
A	Setpoint influence from 0 to 100 %
B	External input signal from 0 to 100 %

- **Linear with Stop**

In the input signal range from 20 to 100 %, the setpoint is influenced linearly.

If the input signal is below 10 %, the pump changes to operating mode **Stop**.

If the input signal is increased above 15 %, the operating mode is changed back to **Normal**. See the figure below.

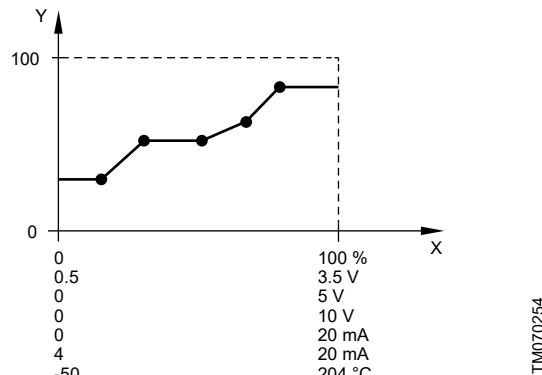

Linear with Stop

Pos.	Description
X:	External input signal from 0 to 100 %
Y:	Setpoint influence from 0 to 100 %
A:	Normal
B:	Stop

- **Influence table**

The setpoint is influenced by a curve made out of two to eight points. There will be a straight line between the points and a horizontal line before the first point and after the last point.

Pos.	Description
X:	External input signal from 0 to 100 %
Y:	Setpoint influence from 0 to 100 %

Predefined setpoints

Pump variant	Predefined setpoints
TPE3, TPE3 D	•
TPE2, TPE2 D	•
TPE Series 2000	0.12 - 22 kW
TPE Series 1000	0.12 - 22 kW

You can set and activate seven predefined setpoints by combining the input signals with digital inputs 2, 3 and 4 as shown in the table below. Set the digital inputs 2, 3 and 4 to **Predefined setpoints** if all seven predefined setpoints are to be used. You can also set one or two of the digital inputs to **Predefined setpoints**. However, this limits the number of predefined setpoints available.

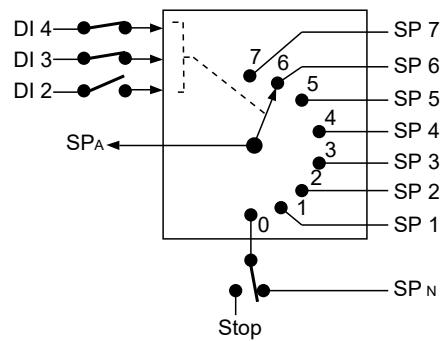

Digital inputs			Setpoint
2	3	4	
0	0	0	Normal setpoint or Stop
1	0	0	Predefined setpoint 1
0	1	0	Predefined setpoint 2
1	1	0	Predefined setpoint 3
0	0	1	Predefined setpoint 4
1	0	1	Predefined setpoint 5
0	1	1	Predefined setpoint 6
1	1	1	Predefined setpoint 7

0: Open contact

1: Closed contact

Example

The figure shows how you can use the digital inputs to set seven predefined setpoints. Digital input 2 is open, and digital inputs 3 and 4 are closed. If you compare with the table above, you can see that **Predefined setpoint 6** is activated.

Pos.	Description
DI	Digital input
SP	Setpoint
SP _A	Actual setpoint
SP _N	Normal setpoint
Stop	Stop

If all digital inputs are open, the motor stops or runs at the normal setpoint. Set the desired action with Grundfos GO or with the HMI 300 or 301 operating panel.

Factory setting

Temperature influence

Pump variant	Temperature influence
TPE3, TPE3 D	•
TPE2, TPE2 D	-
TPE Series 2000	0.12 - 22 kW
TPE Series 1000	0.12 - 22 kW

When this function is enabled in proportional- or constant-pressure control mode, the setpoint for head is reduced according to the liquid temperature.

You can set the temperature influence to function at liquid temperatures below 80 °C or 50 °C. These temperature limits are called T_{max} . The setpoint is reduced in relation to the head set which is equal to 100 % according to the characteristics below.

Temperature influence

In the above example, T_{max} , which is equal to 80 °C, has been selected. The actual liquid temperature, T_{actual} , causes the setpoint for head to be reduced from 100 % to H_{actual} .

The temperature influence function requires the following:

- proportional-pressure or constant-pressure control mode
- pump installed in flow pipe
- system with flow-pipe temperature control.

Temperature influence is suitable for the following systems:

- Systems with variable flows, for example two-pipe heating systems, in which the enabling of the temperature influence function ensures a further reduction of the pump performance in periods with small heating demands and consequently a reduced flow-pipe temperature.
- Systems with almost constant flows, for example one-pipe heating systems and underfloor heating systems, in which variable heating demands cannot be registered as changes in the head as it is the case with two-pipe heating systems. In such systems, you can only adjust the pump performance by enabling the temperature influence function.

Selection of the maximum temperature

In systems with a dimensioned flow-pipe temperature of:

- up to and including 55 °C, select T_{max} equal to 50 °C.
- above 55 °C, select T_{max} equal to 80 °C.

Note: You cannot use the temperature function in air-conditioning and cooling systems.

Factory setting

See section Factory settings of E-pumps.

Limit-exceeded function

Pump variant	Limit-exceeded function
TPE3, TPE3 D	•
TPE2, TPE2 D	•
TPE Series 2000	0.12 - 22 kW
TPE Series 1000	0.12 - 22 kW

Use this function to monitor a measured parameter or one of the internal values such as speed, motor load or motor current. If a set limit is reached, a selected action can take place. You can set two limit-exceeded functions, meaning that you can monitor two parameters or two limits of the same parameter simultaneously.

The function requires setting of the following parameters:

Measured

Set the measured parameter to be monitored.

Limit

Set the limit which activates the function.

Hysteresis band

Set the hysteresis band for when the function must be deactivated again.

Limit exceeded when

Set the function to be activated when the selected parameter exceeds or drops below the set limit.

• above limit

The function is activated if the measured parameter exceeds the set limit.

• below limit

The function is activated if the measured parameter drops below the set limit.

Action

If the value exceeds a limit, you can set an action. The following actions are available:

• Not active

The pump remains in its current state. Use this setting if you only want to activate a signal relay output when the limit is reached.

• Stop

The pump stops.

• Min.

The pump reduces the speed to minimum speed.

• Max.

The pump increases the speed to maximum speed.

• User-defined speed

The pump runs at a speed set by the user.

• Alarm and Stop

An alarm is given, and the pump stops.

• Alarm and Min

An alarm is given, and the pump decreases the speed to a minimum.

• Alarm and Max

An alarm is given, and the pump increases the speed to maximum.

• Alarm and User-defined speed

An alarm is given, and the pump runs at the speed set by the user.

Detection delay

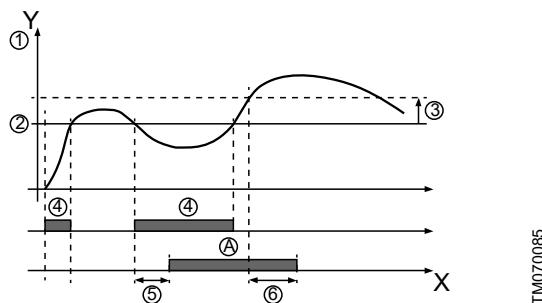

Setting the detection delay ensures that the monitored parameter stays above or below a set limit in a set time before the function is activated.

Resetting delay

The resetting delay is the time from when the measured parameter differs from the set limit, including the set hysteresis band, and until the function is reset.

Example

The function is to monitor the outlet pressure from the pump. If the pressure is below 5 bar for more than 5 seconds, a warning is indicated. If the pressure is above 7 bar for more than 8 seconds, reset the limit-exceeded warning.

X: Time in seconds

Y: Pressure in bar

Pos.	Parameter	Setting
1	Measured	Discharge pressure
2	Limit	5 bar
3	Hysteresis band	2 bar
4	Limit exceeded when	below limit
5	Detection delay	5 seconds
6	Resetting delay	8 seconds
A	Limit-exceeded function active	-
-	Action	Warning

Enable/disable radio comm.

Pump variant	Enable/disable radio comm.
TPE3, TPE3 D	•
TPE2, TPE2 D	•
TPE Series 2000	0.12 - 22 kW
TPE Series 1000	0.12 - 22 kW

Use this function to set the radio communication to **Enabled** or **Disabled**. Select **Disabled** in areas where radio communication is not allowed.

Bluetooth communication remains active.

Factory setting

See section Factory settings of E-pumps.

Related information

[14. Factory settings of E-pumps](#)

Enable/disable Bluetooth comm.

Only from 15-22 kW 2-pole and 11-22 kW 4-pole.

Use this function to set the Bluetooth communication to **Enabled** or **Disabled**. Select **Disabled** in areas where Bluetooth communication is not allowed.

Radio communication remains active.

Initiate Bluetooth connection

Only from 15-22 kW 2-pole and 11-22 kW 4-pole.

Use this function if Grundfos GO is installed on Huawei smartphones with BLE version 5.0 or older. This function is used to establish a Bluetooth connection to Grundfos GO. Open the Grundfos GO app on your device and select **Initiate Bluetooth connection**. Then select **Yes** and follow the instructions on the device.

Setup of AYB terminals

Only from 15-22 kW 2-pole and 11-22 kW 4-pole.

Protocol selection

Use this function to select which fieldbus protocol that must be active on the AYB terminals (RS-485).

Select between the following:

- Modbus RTU
- GENIbus.

Modbus RTU settings

Only from 15-22 kW 2-pole and 11-22 kW 4-pole.

Modbus RTU address

Use this function to allocate a unique number to the pump. This makes it possible to distinguish between pumps in connection with Modbus RTU communication.

Select a number between 1 and 247.

Baud rate

Use this function to select the baud rate at which Modbus RTU is to communicate.

Select between the following baud rates:

- 9600 bps
- 19200 bps
- 38400 bps
- 115200 bps.

Parity

Use this function to set the parity of the Modbus RTU channel.

Select between these values:

- None
- Odd
- Even.

Stop bits

Use this function to set the number of stop bits on the Modbus RTU channel.

Select between these values:

- 1 bit
- 2 bits.

IP Setting

Only from 15-22 kW 2-pole and 11-22 kW 4-pole.

Use this function to set the Ethernet communication.

DHCP

Use this function to select if DHCP should be activated or deactivated.

If activated, the E-pump will receive network configuration from the DHCP server on the network.

If deactivated, IP address, Subnet mask, Gateway and Primary DNS must be configured manually.

IP address

Use this function to manually set the IP address. IP address format:

Example: 192.168.0.10

Subnet mask

Use this function to manually set the subnet mask. Subnet mask format:

Example: 255.255.255.0

Gateway

Use this function to manually set the gateway address. Gateway address format:

Example: 192.168.1.1

Primary DNS

Use this function to manually set the primary DNS address.

Example of primary DNS address format: 8.8.8.8

Secondary DNS

Use this function to manually set the secondary DNS address.

Example of secondary DNS address format: 4.4.4.4

Special functions

Pulse flowmeter setup

Pump variant	Pulse flowmeter setup
TPE3, TPE3 D	•
TPE2, TPE2 D	•
TPE Series 2000	0.12 - 22 kW
TPE Series 1000	0.12 - 22 kW

You can connect an external pulse flowmeter to one of the digital inputs in order to register the actual and accumulated flows. Based on this, you can also calculate the specific energy.

To enable a pulse flowmeter, set one of the digital-input functions to **Accumulated flow** and set the pumped volume per pulse.

Related information

[Digital inputs](#)

Ramps

Pump variant	Ramps
TPE3, TPE3 D	•
TPE2, TPE2 D	•
TPE Series 2000	0.12 - 22 kW
TPE Series 1000	0.12 - 22 kW

The ramps determine how quickly the product can accelerate and decelerate during start and stop or setpoint changes.

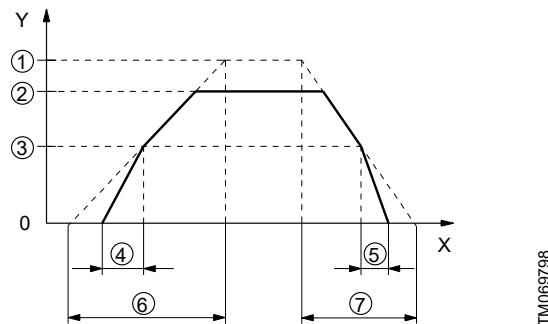

You can make the following settings:

- acceleration time, 0.1 to 300 s
- deceleration time, 0.1 to 300 s.

The times apply to the acceleration from 0 rpm to a fixed maximum speed and the deceleration from a fixed maximum speed to 0 rpm, respectively.

At short deceleration times, the deceleration of the product may depend on load and inertia as there is no possibility of actively braking the product.

If the power supply is switched off, the deceleration of the product only depends on the load and inertia.

Ramp-up and ramp-down

Pos.	Description
X	Time
Y	Speed
1	Fixed maximum
2	User set maximum
3	User set minimum
4	Fixed initial ramp
5	Fixed final ramp
6	User set ramp-up
7	User set ramp-down

Factory setting

Alarm handling

Pump variant	Alarm handling
TPE3, TPE3 D	•
TPE2, TPE2 D	•
TPE Series 2000	0.12 - 22 kW
TPE Series 1000	0.12 - 22 kW

This setting determines how the pump must react in case of a sensor failure.

Alarm or warning types:

The alarm handling determines how the pump must react in case of a sensor failure.

- Warning**

A warning. There is no change in the operating mode.

- Stop**

The pump stops.

- Min.**

The pump reduces the speed to minimum.

- Max.**

The pump increases the speed to maximum.

- User defined speed**

The pump runs at the speed set by the user.

Affected inputs:

- Analog input 1**
- Analog input 2**
- Analog input 3**
- Built-in Grundfos sensor**
- Pt100/1000 input 1**
- Pt100/1000 input 2**
- Liqtec input**

Motor bearing monitoring

Pump variant	Motor bearing monitoring
TPE3, TPE3 D	•
TPE2, TPE2 D	•
TPE Series 2000	0.12 - 22 kW
TPE Series 1000	0.12 - 22 kW

Use this function to select whether or not you want to monitor the motor bearings.

You can make the following settings:

- **Active**
- **Not active**

When the function is set to **Active**, a counter in the controller starts counting the running hours of the bearings. The running hours are calculated on the basis of the motor speed. When a predefined limit is reached, a warning indicates that the bearings must be replaced or relubricated.

If you change the function to **Not active**, the counter continues to count. However, no warning is given when it is time to replace the bearings. If you change the function to **Active** again, the accumulated running hours are used to recalculate the replacement time.

Factory setting

See section Factory settings of E-pumps.

Service

Pump variant	Service
TPE3, TPE3 D	•
TPE2, TPE2 D	•
TPE Series 2000	0.12 - 22 kW
TPE Series 1000	0.12 - 22 kW

Time to next service (Motor bearing service)

This display shows when to replace the motor bearings. The controller monitors the operating pattern of the motor and calculates the period between bearing replacements.

Displayable values:

- **in 2 years**
- **in 1 year**
- **in 6 months**
- **in 3 months**
- **in 1 month**
- **in 1 week**
- **Now!**

Bearing replacements

The display shows the number of bearing replacements made during the lifetime of the motor.

Bearings replaced (Motor bearing maintenance)

When the bearing monitoring function is active, a warning is given when the motor bearings must be replaced.

1. When you have replaced the motor bearings, press **Bearings replaced**.

Bearings relubricated

When the bearing monitoring function is active, a warning is given when the motor bearings must be relubricated.

Bearings can be relubricated 5 times before they must be replaced.

The amount of grease can be found on the bearing nameplate on the motor.

1. When you have relubricated the bearings, press **Bearings relubricated**.

General settings

Language

Connection code

Pump variant	Connection code
TPE3, TPE3 D	•
TPE2, TPE2 D	•
TPE Series 2000	0.12 - 22 kW
TPE Series 1000	0.12 - 22 kW

Use the connection code to enable automatic connection between Grundfos GO and the product. Thus, you do not need to press **OK** or the **Radio communication** button each time.

You can also use the connection code to restrict remote access to the product.

You can only set the connection code with Grundfos GO.

Run start-up guide

Pump variant	Run start-up guide
TPE3, TPE3 D	•
TPE2, TPE2 D	•
TPE Series 2000	0.12 - 22 kW
TPE Series 1000	0.12 - 22 kW

The function is only available in the HMI 300 and 301 operating panels.

The startup guide automatically starts when you start the product for the first time. You can always run the startup guide later. The startup guide guides you through the general settings of the product.

To run the startup guide, go to **Settings > General settings > Run start-up guide**.

Alarm log

Pump variant	Alarm log
TPE3, TPE3 D	•
TPE2, TPE2 D	•
TPE Series 2000	0.12 - 22 kW
TPE Series 1000	0.12 - 22 kW

This function contains a list of logged alarms from the product. The log shows the alarm code, name of the alarm, when the alarm occurred and when the alarm was reset.

Warning log

Pump variant	Warning log
TPE3, TPE3 D	•
TPE2, TPE2 D	•
TPE Series 2000	0.12 - 22 kW
TPE Series 1000	0.12 - 22 kW

This function contains a list of logged warnings from the product. The log shows the warning code, name of the warning, when the warning occurred and when the warning was reset.

Assist

Pump variant	Assist
TPE3, TPE3 D	•
TPE2, TPE2 D	•
TPE Series 2000	0.12 - 22 kW
TPE Series 1000	0.12 - 22 kW

This menu consists of a number of different assist functions.

Assist functions are small guides that take you through the steps needed to set the product.

Assisted pump setup

Pump variant	Assisted pump setup
TPE3, TPE3 D	•
TPE2, TPE2 D	•
TPE Series 2000	0.12 - 22 kW
TPE Series 1000	0.12 - 22 kW

The menu guides you through the following:

Setting of pump

- Selection of control mode
- Configuration of feedback sensors
- Adjustment of the setpoint
- Controller settings
- Summary of settings.

With Grundfos GO, access the **Assisted pump setup** menu.

With the HMI 300 or 301 operating panel, access the **Assisted pump setup** menu.

Example of how to use the **Assisted pump setup** for setting up the pump to constant pressure:

Grundfos GO

1. Open the **Assist** menu.
2. Select **Assisted pump setup**.
3. Select the control mode Constant pressure.
4. Read the description of this control mode.
5. Select which analog input to use as sensor input.
6. Select sensor function according to where the sensor is installed in the system. See figure Overview of sensor locations.
7. Select electrical input signal according to the sensor specifications.
8. Select measuring unit according to the sensor specifications.
9. Set the minimum and maximum sensor values according to the sensor specifications.
10. Set the desired setpoint.
11. Set the controller settings K_p and T_i . See the recommendations in section Controller (Controller settings).
12. Type the pump name.
13. Check the summary of settings and confirm them.

Advanced control panel

1. Open the **Assist** menu.
2. Select **Assisted pump setup**.
3. Select the control mode Const. pressure.
4. Select which analog input to use as sensor input.
5. Select the measured parameter to be controlled. See figure Overview of sensor locations.
6. Select measuring unit according to the sensor specifications.
7. Set the minimum and maximum sensor values according to the sensor specifications.
8. Select electrical input signal according to the sensor specifications.
9. Set the setpoint.
10. Set the controller settings K_p and T_i . See the recommendations in section Controller (Controller settings).

11. Check the summary of settings and confirm them by pressing [OK].

Setup, analog inputs

Pump variant	Setup, analog inputs
TPE3, TPE3 D	•
TPE2, TPE2 D	•
TPE Series 2000	0.12 - 22 kW
TPE Series 1000	0.12 - 22 kW

This function is only available in the HMI 300 and 301 operating panels.

- **Analog inputs**, follow on-screen instructions.
- **Pt100/1000 inputs**, follow on-screen instructions.

Setting of date and time

Pump variant	Setting of date and time
TPE3, TPE3 D	•
TPE2, TPE2 D	•
TPE Series 2000	0.12 - 22 kW
TPE Series 1000	0.12 - 22 kW

The function is only available in the HMI 300 and 301 operating panels.

The inputs and outputs available depend on the functional module fitted in the motor.

This menu guides you through the following:

- **Select date format**
- **Set date**
- **Select time format**
- **Set time**.

Multipump function

Pump variant	Multipump function
TPE3, TPE3 D	•
TPE2, TPE2 D	•
TPE Series 2000	0.12 - 22 kW
TPE Series 1000	0.12 - 22 kW

The function **Multi-pump function** enables the control of up to four motors connected in parallel without the use of external controllers. The pumps or motors in a system communicate with each other via the wireless GENlair connection or the wired GENI connection.

You can set a multipump system via the master motor, which is the first selected motor.

If several pumps or motors in the system have sensors, they can all function as the master and take over the master function if the other fails. This provides additional redundancy in the multimotor system.

You can choose between the following multimotor functions:

Alternating operation

Alternating operation functions as a duty and standby operating mode and is possible with two pumps or two motors of the same size and type connected in parallel. The main purpose of the function is to ensure an even

amount of running hours and to ensure that the other pump or motor starts if the duty pump or motor stops due to an alarm.

You can choose between two alternating operating modes:

• Alternating operation, time

The change from one pump or motor to the other is based on time.

• Alternating operation, energy

The change from one pump or motor to the other is based on energy consumption.

If the duty pump or motor fails, the other pump or motor starts.

Backup operation

Backup operation is possible with two motors of the same size and type connected in parallel. One motor is operating continuously. The backup motor is operated for a short time each day to prevent seizing up. If the duty motor stops due to a fault, the backup motor starts.

Cascade operation

This function is available with up to 4 motors installed in parallel. The motors must be of the same size and if used with pumps, the pumps must be of the same model.

- The performance is adjusted to the demand through cutting pumps in or out and through parallel control of the pumps in operation.
- The controller maintains controlled value through continuous adjustment of the speed of the pumps.
- Pump changeover is automatic and depends on load, operating hours and fault detection.
- All pumps in operation run at the same speed.
- The number of pumps in operation also depends on the energy consumption of the pumps. If only one pump is required, two pumps will run at a lower speed if this results in a lower energy consumption.
- If several pumps or motors in the system have a sensor, they can all function as the master and take over the master function if the other fails.

Sensor to be used

This function defines the sensor to be used for controlling the pump system.

Select **Master pump sensor** if the sensor is placed in a way where it can measure the output from all the pumps in the system, for example in the manifold.

Select **Running pump sensor** if the sensor is placed on or across individual pumps. For example if the sensor is installed behind non-return valves, and if it is not able to measure the output from all pumps.

This setting is only available in alternating operation and cascade operation.

Description of control mode

Pump variant	Description of control mode
TPE3, TPE3 D	•
TPE2, TPE2 D	•
TPE Series 2000	0.12 - 22 kW
TPE Series 1000	0.12 - 22 kW

The function is only available in the HMI 300 and 301 operating panels.

The function describes each of the control modes available for the product.

Assisted fault advice

Pump variant	Assisted fault advice
TPE3, TPE3 D	•
TPE2, TPE2 D	•
TPE Series 2000	0.12 - 22 kW
TPE Series 1000	0.12 - 22 kW

This function provides guidance and corrective actions in the event of product failure.

Priority of settings

With Grundfos GO, you can set the motor to operate at maximum speed or to stop.

If two or more functions are enabled at the same time, the motor operates according to the function with the highest priority.

If you have set the motor to maximum speed via the digital input, the motor operating panel or Grundfos GO can only set the motor to **Manual** or **Stop**.

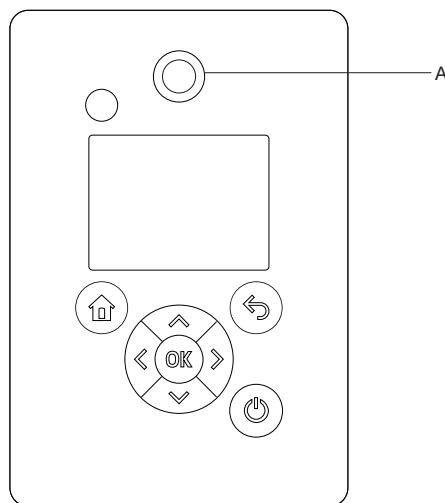

The priority of the settings appears from the table below:

Priority	Start/stop button	Grundfos GO or operating panel on motor	Digital input	Bus communication
1	Stop			
2		Stop ²⁶⁾		
3		Manual		
4		Maximum speed / User defined speed ²⁶⁾		
5			Stop	
6			User defined speed	
7				Stop
8				Maximum speed / User defined speed
9				Minimum speed
10				Start
11			Maximum speed	
12		Minimum speed		
13			Minimum speed	
14			Start	
15	Start			

²⁶⁾ Stop and Maximum speed settings made with Grundfos GO or on the motor operating panel can be overruled by another operating-mode command sent from a bus, for example Start. If the bus communication is interrupted, the motor resumes its previous operating mode, for example Stop, that was selected with Grundfos GO or the motor operating panel.

Grundfos Eye

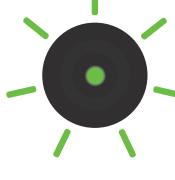

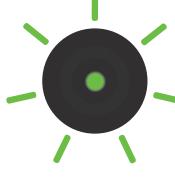

The operating condition of the motor is indicated by Grundfos Eye on the motor operating panel. See figure below (A).

TM084637

Grundfos Eye indicator light

Indicator light	Indication	Description
	No lights are on.	Power off The motor is not running.
	Two opposite green indicator lights are rotating.	Power on The motor is running. The indicator lights are rotating in the direction of rotation of the motor when seen from the non-drive end.
	Two opposite green indicator lights are permanently on.	Power on The motor is not running.
	One yellow indicator light is rotating.	Warning The motor is running. The indicator light is rotating in the direction of rotation of the motor when seen from the non-drive end.
	One yellow indicator light is permanently on.	Warning The motor has stopped.
	Two opposite red indicator lights are flashing simultaneously.	Alarm The motor has stopped.

Indicator light	Indication	Description
	The green indicator light in the middle flashes quickly four times.	Grundfos Eye flashes four times when you press the Grundfos Eye symbol next to the motor name in Grundfos GO.
	The green indicator light in the middle is flashing continuously.	You have selected the motor in Grundfos GO, and the motor is ready to be connected.
	The green indicator light in the middle flashes quickly for a few seconds.	The motor is controlled by Grundfos GO or exchanging data with Grundfos GO.
	The green indicator light in the middle is permanently on.	The motor is connected to Grundfos GO.

Signal relays

The following applies to the pumps below:

- TPE3, TPE3 D pumps
- TPE2, TPE2 D pumps
- TPE Series 1000 and 2000 pumps with the following motor sizes:
0.12 - 22 kW
- TPE Series 1000 pumps

The motor has two outputs for potential-free signals via two internal relays. You can set the signal outputs to **Operation**, **Pump running**, **Ready**, **Alarm** and **Warning**.

The functions of the two signal relays appear from the table below:

Grundfos Eye is off

The power is off.

Operation	Pump running	Ready	Alarm	Warning	Operating mode
					-

Grundfos Eye is rotating green

The pump runs in **Normal** mode in open or closed loop.

Operation	Pump running	Ready	Alarm	Warning	Operating mode
					Normal Min. or Max.

Grundfos Eye is rotating green

The pump runs in **Manual** mode.

Operation	Pump running	Ready	Alarm	Warning	Operating mode
					Manual

Grundfos Eye is permanently green

The pump is ready for operation but is not running.

Operation	Pump running	Ready	Alarm	Warning	Operating mode
					Stop

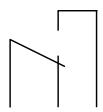

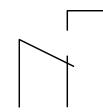

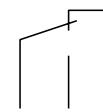

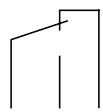

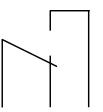

Grundfos Eye is rotating yellow

Warning, but the pump is running.

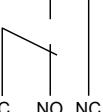

Operation	Pump running	Ready	Alarm	Warning	Operating mode
					Normal Min. or Max.

Grundfos Eye is rotating yellow

Warning, but the pump is running.

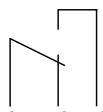

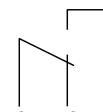

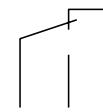

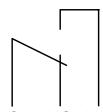

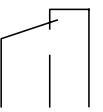

Operation	Pump running	Ready	Alarm	Warning	Operating mode
					Manual

Grundfos Eye is permanently yellowWarning, but the pump was stopped via a **Stop** command.

Operation	Pump running	Ready	Alarm	Warning	Operating mode
					Stop

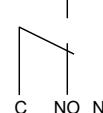

Grundfos Eye is rotating red

Alarm, but the pump is running.

Operation	Pump running	Ready	Alarm	Warning	Operating mode
					Normal Min. or Max.

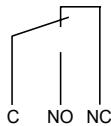

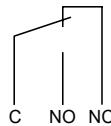

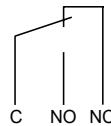

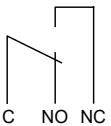

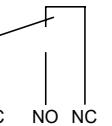

Grundfos Eye is rotating red

Alarm, but the pump is running.

Operation	Pump running	Ready	Alarm	Warning	Operating mode
					Manual

Grundfos Eye is flashing red

The pump has been stopped due to an alarm.

Operation	Pump running	Ready	Alarm	Warning	Operating mode
					Stop

Safe Torque off (STO) function

Only from 15-22 kW 2-pole and 11-22 kW 4-pole.

Safe Torque Off (STO) is a safety function with the purpose to stop the motor from turning, without actively braking it. It follows the definition by EN61800-5-2.

For instructions on how to activate and operate the Safe Torque Off (STO) function, read these installation and operating instructions.

QR92916582

Safe Torque Off

Installation and operating instructions

<http://net.grundfos.com/qr/i/92916582>

13. User interfaces for TPE pumps 30-55 kW

TPE pumps 30-55 kW, 2-pole and 18.5 - 55 kW, 4-pole have Siemens motors with integrated CUE frequency converters. TPE pumps with 18.5 kW motors have a integrated 22 kW CUE frequency converter. The frequency converter part of the TPE Series 2000 and TPE Series1000 will in the following descriptions be named as CUE.

Default control mode made in TPE Series 1000:

- Open loop.

Default control mode made in TPE Series 2000:

- Proportional differential pressure.

User interface

The user interface offers these possibilities:

- Local operation via an operating panel with graphic display.
- Remote operation via external signals, for instance via digital inputs or GENIbus.
- Monitoring of operating status via indicator lights and signal relays.
- Display of alarms or warnings and logging.

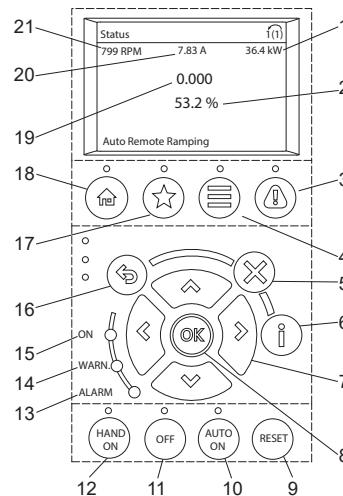

Operation/display

CUE offers a wide range of data readouts representing the operating conditions of the CUE itself, the motor, the pump, and the system. All these data readouts are available by entering the [Main] menu parameter group 16-xx "Data Readouts":

- 16-1x "General Status"
- 16-2x "Motor Status"
- 16-3x "Drive Status"
- 16-5x "Setpoint and Feedback"
- 16-6x "Inputs and Outputs"
- 16-8x "Fieldbus and GENI port"
- 19-9x "Diagnostics readouts".

CUE [Status] screen shows up to five operational information. These can be adjusted in [Main] menu parameters 0-2x.

Position	Parameter	Default
21	0-20 Display line 1.1 Small	External setpoint
20	0-20 Display line 1.2 Small	Actual setpoint
1	0-20 Display line 1.3 Small	Speed [RPM]
19	0-23 Display Line 2 Large	Operating mode
2	0-23 Display Line 3 Large	Control mode

Operating panel

TM074597

Password protection

Password numbers can be used to protect the [Main] and [Favourites] menus as well as operating keys [Hand on], [Off], [Auto On] and [Reset].

Restricted access is set for [Main] menu in parameter 0-61 and for [Favourites] menu in parameter 0-66. Select Full access [0] to disable the password defined in parameter 0-60 and 0-65, respectively. Select Read only [1] to prevent unauthorised editing of parameters. Select No access [2] to prevent unauthorised viewing and editing of parameters.

Restricted use of operating keys [Hand on], [Off], [Auto On] and [Reset] is set in parameter group 0-4x. Select Disabled [0] to avoid accidental use of the key. Select Password [2] to avoid unauthorised use of the key.

Inputs and outputs

CUE is equipped with a number of inputs and outputs:

- 1 RS-485 GENIbus connection
- 1 analog input, 0-10 V, 0/4-20 mA
 - external setpoint
- 1 analog input, 0-10 V, 0/4-20 mA
 - sensor input, feedback sensor
- 1 analog output, 0/4-20 mA (depends on the output signal)
- 6 digital inputs
 - 2 inputs can be changed to digital outputs
 - all digital inputs and outputs are programmable
- 2 signal relays (C/NO/NC)
 - programmable.

Accessories

Grundfos offers a number of accessories for CUE. See section CUE accessories.

MCB 114 sensor input module

MCB 114 is an option offering additional analog inputs for CUE:

- 1 analog input, 0/4-20 mA
- 2 inputs for Pt100/Pt1000 temperature sensors.

MCO 101 multipump module

MCO 101 is an option offering cascade of multiple CUEs:

- cascade of up to 6 CUEs. Only possible with the Constant pressure control mode.

Related information

[CUE accessories](#)

Operating modes

These operating modes can be selected with CUE:

- Normal
- Stop
- Min. curve
- Max. curve
- User curve.

The operating modes are set on the operating panel by using the [Favourites] menu. The operating modes can be set without changing the setpoint setting.

Normal

The pump operates in the selected control mode.

The control modes are different ways of controlling the pump speed when the operating mode is set to "Normal".

Stop

The pump has been stopped by the user.

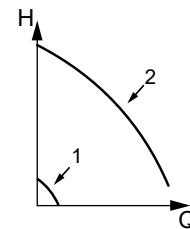

Min. curve

The pump is running at a set minimum speed value. See the figure about minimum and maximum curves.

For instance, this operating mode can be used during periods with a very small flow requirement.

Max. curve

The pump is running at a set maximum speed. See the figure below.

TM038813

Min. and max. curves

Pos.	Description
1	Min.
2	Max.

User curve

The pump is running at a user-defined speed.

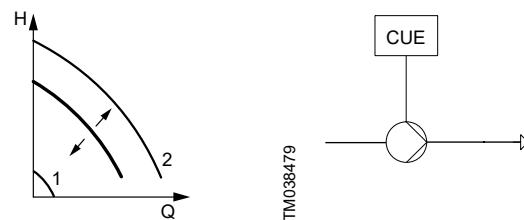

Control modes

CUE has a built-in PID controller that provides closed-loop control of the value you want to control. CUE can also be set to open-loop control where the setpoint represents the desired pump speed. The control modes are set on the operating panel in the startup guide or changed using the [Favourites] menu.

Open loop is typically used without a sensor. All the other control modes require a sensor.

Open loop, constant curve

The speed is kept at a set value in the range between the minimum and maximum curves. See the figure below.

TM038479

Open loop, constant curve

Pos.	Description
1	Min.
2	Max.

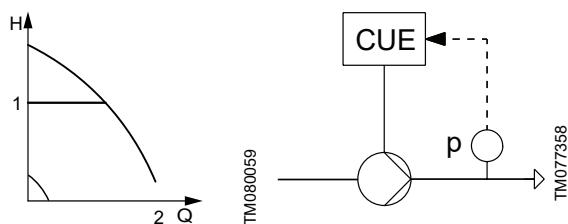

In the "Open loop" control mode, the setpoint is set in percentage of the nominal speed. The setting range is between the minimum and maximum curves.

Operation on constant curve can, for instance, be used for pumps with no sensor connected.

This control mode is also typically used in connection with an overall control system such as Control MPC or another external controller.

Constant pressure

The outlet pressure is kept constant, independently of the flow rate.

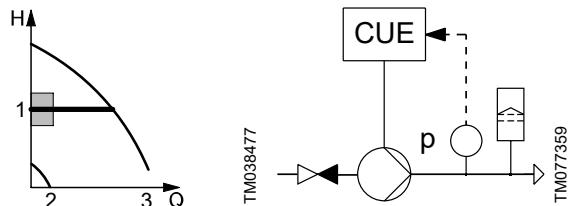

Pos.	Description
1	H_{set}
2	Q_{max}

Constant pressure

The pump is controlled according to a constant pressure measured after the pump. This means that the pump offers a constant pressure in the Q-range of 0 to $Q_{\text{max.}}$, represented by the horizontal line in the QH diagram.

Constant pressure with stop function

The outlet pressure is kept constant at high flow rate ($Q > Q_{\text{min.}}$). On/off operation at low flow rate.

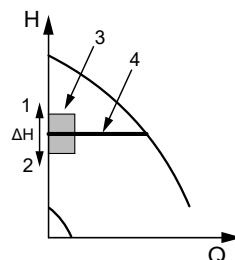

Pos.	Description
1	H_{set}
2	$Q_{\text{min.}}$
3	$Q_{\text{max.}}$

Constant pressure with stop function

The pump is controlled according to a constant pressure measured after the pump. This means that the pump offers a constant pressure in the Q-range of $Q_{\text{min.}}$ to $Q_{\text{max.}}$, represented by the horizontal line in the QH diagram.

The Stop function is activated by default for constant pressure, but can be deactivated in parameter 200-19 "Stop function".

The purpose of the stop function is to stop the pump when low or no flow is detected. When low flow is detected, the pump is in on/off operation. If there is flow, the pump continues to operate according to the setpoint.

TM080061

Constant pressure with stop function. Difference between start and stop pressures (ΔH)

Pos.	Description
1	Stop pressure
2	Start pressure
3	On/off operation
4	Continuous operation

Low flow can be detected in two different ways:

- with the built-in low-flow detection function
- with a flow switch connected to a digital input.

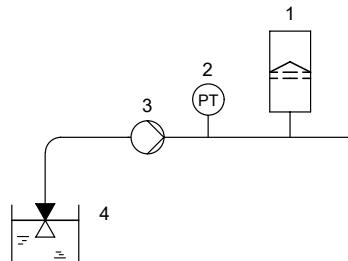

The low-flow detection function checks the flow regularly by reducing the speed for a short time. No or only a small change in pressure means that there is low flow.

When a flow switch detects low flow, the digital input is activated.

It is only possible to use the stop function if the system incorporates these components:

- a pressure sensor
- a non-return valve
- a diaphragm tank.

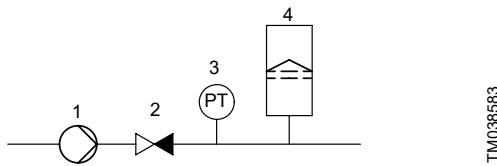

The non-return valve must always be installed before the pressure sensor.

TM038582

Position of the non-return valve and pressure sensor in a system with suction lift

Pos.	Description
1	Diaphragm tank
2	Pressure sensor
3	Pump
4	Non-return valve

Position of the non-return valve and pressure sensor in a system with positive inlet pressure

Pos.	Description
1	Pump
2	Non-return valve
3	Pressure sensor
4	Diaphragm tank

The stop function requires a diaphragm tank of a certain minimum size. The tank must be installed as close as possible after the pump, and the precharge pressure must be $0.7 \times$ actual setpoint.

Recommended diaphragm tank sizes:

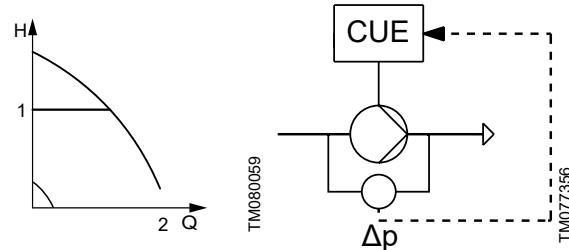

Rated flow rate of pump [m ³ /h (gpm)]	Typical diaphragm tank size [litres (gallons)]
0-6 (0-26)	8 (2)
7-24 (26-110)	18 (5)
25-40 (110-180)	50 (13)
41-70 (180-310)	120 (32)
71-100 (310-440)	180 (48)

If a diaphragm tank of the above size is installed in the system, the factory setting of ΔH is the correct setting. If the tank installed is too small, the pump starts and stops too often.

The stop function is default activated in constant pressure applications. If not desired, it can be deactivated in parameter 200-19 "Stop function".

Constant differential pressure, pump

The differential pressure of the pump is kept constant, independently of the flow rate.

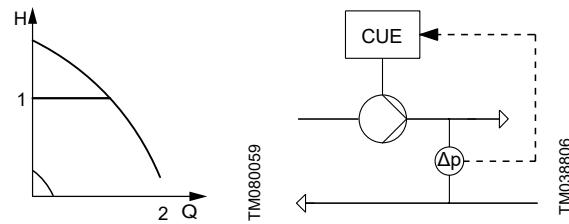

Pos.	Description
1	H_{set}
2	Q_{max}

Constant differential pressure, pump

The pump is controlled according to a constant differential pressure measured across the pump. This means that the pump system offers constant differential pressure in the Q-range of 0 to Q_{max} , represented by the horizontal line in the QH diagram.

Constant differential pressure, system

The differential pressure of the system is kept constant, independently of the flow rate.

Pos.	Description
1	H_{set}
2	Q_{max}

Constant differential pressure, system

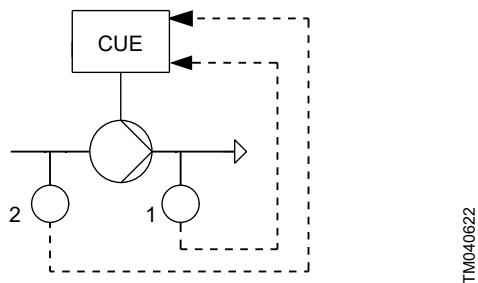

The pump is controlled according to a constant differential pressure measured across the system. This means that the pump offers constant differential pressure of the system in the Q-range of 0 to Q_{max} , represented by the horizontal line in the QH diagram.

Differential pressure from two sensors

The purpose of this function is to make differential pressure control possible by using measurements from two separate pressure sensors. It can be used in these control modes:

- proportional differential pressure
- constant differential pressure.

The function requires an MCB 114 sensor input module.

Differential pressure from two sensors

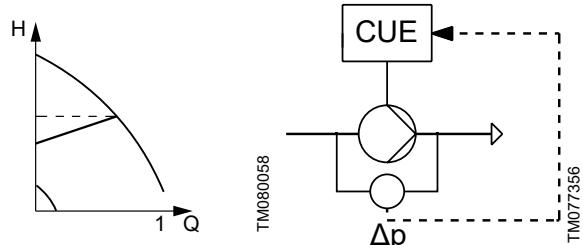

Pos.	Description
1	Sensor 1
2	Sensor 2

Sensor 1 is connected to sensor input 1.

Sensor 2 is connected to sensor input 2 of an MCB 114 sensor input module.

Proportional differential pressure

The differential pressure of the pump is reduced at falling flow rate and increased at rising flow rate.

Proportional differential pressure

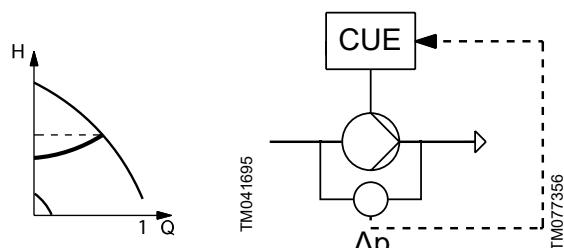

Pos.	Description
1	Q_{\max}

The pump is controlled according to a differential pressure measured across the pump. This means that the pump system offers a proportional differential pressure in the Q-range of 0 to Q_{\max} , represented by the sloping line in the QH diagram.

The proportional differential pressure can be selected with one of these flow dependencies:

- linear, default
- quadratic.

When the flow dependency is selected as quadratic, the differential pressure of the pump is reduced with a quadratic curve at falling flow rate and increased at rising flow rate.

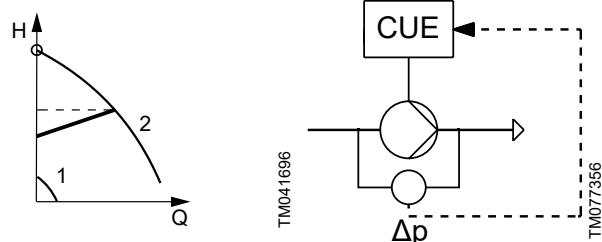

Proportional differential pressure, quadratic curve

Pos.	Description
1	Q_{\max}

The pump is controlled according to a differential pressure measured across the pump. This means that the pump system offers a flow-compensated differential pressure in the Q-range of 0 to Q_{\max} , represented by the quadratic curve in the QH diagram.

H_{\max} update

This function can be used in connection with the control mode Proportional differential pressure. The purpose is to find the "true" value of the maximum head at no flow and nominal pump speed.

Pos.	Description
1	Min.
2	Max.

Proportional differential pressure, H_{\max} . update

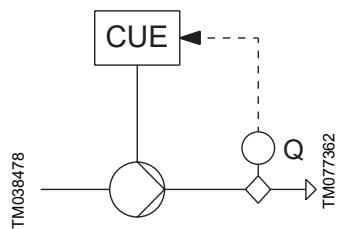

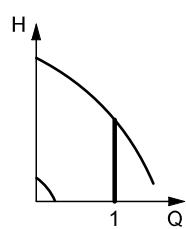

The function consists of two steps:

1. Ramping up the speed to nominal speed.
2. Measuring H_{\max} for 20 seconds at nominal speed.

Valves must be closed so that the pump is operating without flow.

Constant flow rate

The flow rate is kept constant, independently of the head.

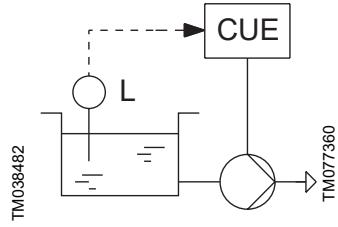

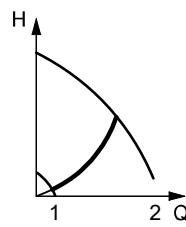

Constant flow rate

Pos.	Description
1	Q_{set}

The pump is controlled according to a constant flow rate, represented by the vertical line in the QH diagram.

Constant level

The liquid level is kept constant, independently of the flow rate.

Constant level

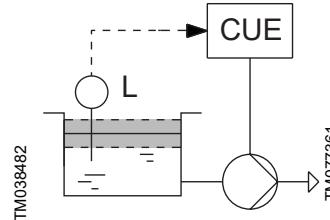

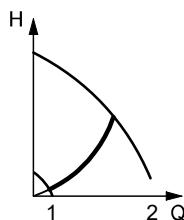

Pos.	Description
1	$Q_{Min.}$
2	$Q_{Max.}$

The pump is controlled according to a constant liquid level. This means that the pump offers a constant level in the Q-range of $Q_{min.}$ to $Q_{max.}$, represented by the quadratic line in the QH diagram.

The function is an emptying function by default.

Constant level with stop function

The liquid level is kept constant at high flow rate. On/off operation is at low flow rate.

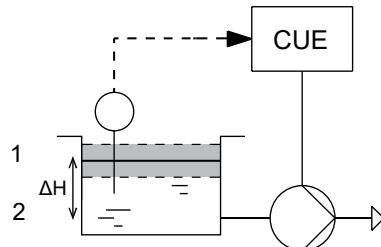

Constant level with stop function

Pos.	Description
1	$Q_{Min.}$
2	$Q_{Max.}$

The pump is controlled according to a constant liquid level. This means that the pump offers a constant level in the Q-range of $Q_{min.}$ to $Q_{max.}$, represented by the quadratic line in the QH diagram.

The function is an emptying function by default.

The purpose of the stop function is to stop the pump when low or no flow is detected. When low flow is detected, the pump is in on/off operation. If there is flow, the pump continues to operate according to the setpoint.

Constant level with stop function. Difference between start and stop levels (ΔH)

Pos.	Description
1	Start level
2	Stop level

Low flow can be detected in two different ways:

- with the built-in low-flow detection function
- with a flow switch connected to a digital input.

The low-flow detection function checks the flow regularly by measurement of speed and power.

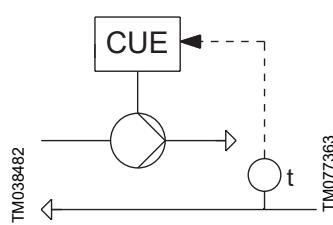

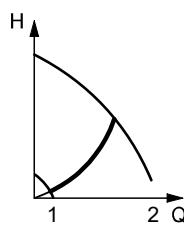

When a flow switch detects low flow, the digital input is activated.

It is only possible to set constant level with stop function if the system incorporates a level sensor, and all valves can be closed.

The stop function is default activated in constant pressure applications. If not desired, it can be deactivated in parameter 200-19 "Stop function".

Constant temperature

The liquid temperature is kept constant, independently of the flow rate.

Constant temperature

Pos.	Description
1	$Q_{\text{Min.}}$
2	$Q_{\text{Max.}}$

The pump is controlled according to a constant temperature. This means that the pump offers a variable flow rate in the Q-range of $Q_{\text{min.}}$ to $Q_{\text{max.}}$, represented by the quadratic line in the QH diagram.

Constant other value

Any other value is kept constant. See the CUE installation and operation instructions for further information.

Setpoints

The setpoint is normally set in the startup guide and changed via the [Favourites] menu on the CUE operating panel. If needed, the setpoint can be influenced via the external setpoint input.

CUE offers these setpoint possibilities:

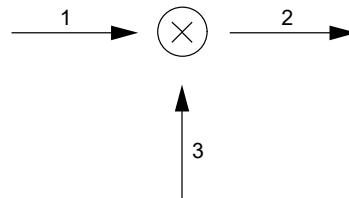

- External setpoint
- Predefined setpoints
- GENIbus setpoint.

The setpoint range depends on the selected control mode:

- In "Open loop" control mode, the setpoint is set in percentage corresponding to the required speed. The setting range is between the minimum and maximum curves in percentage of nominal frequency.
- In "Proportional differential pressure" control mode, the setting range is equal to 25 % to 90 % of the maximum head.
- In all the other control modes, the setting range is equal to the sensor measuring range.

External setpoint influence

The setpoint can be influenced by connecting an analog signal to the external setpoint input and is activated in the startup guide.

TM043373

Setpoint, CUE menu and external setpoint signal

Pos.	Description
1	Setpoint, CUE menu
2	Actual setpoint
3	External setpoint signal

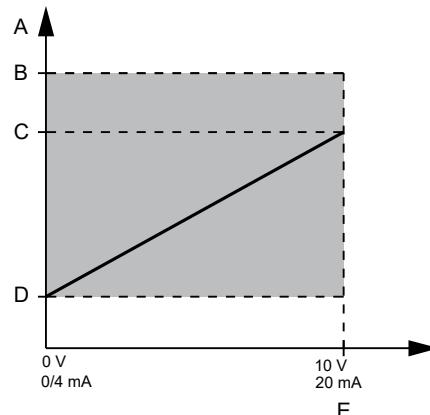

The signal can influence the actual setpoint by these possibilities of the function:

- External setpoint, default
- Inverse external setpoint
- External setpoint with stop
- External setpoint based on a reference table.

The external setpoint signal is used for calculating the actual setpoint. The minimum signal is the minimum setpoint, and the maximum signal is the normal setpoint set via the CUE [Favourites] menu "202-0x".

External setpoint, default

The actual setpoint is a linear function of the external setpoint signal.

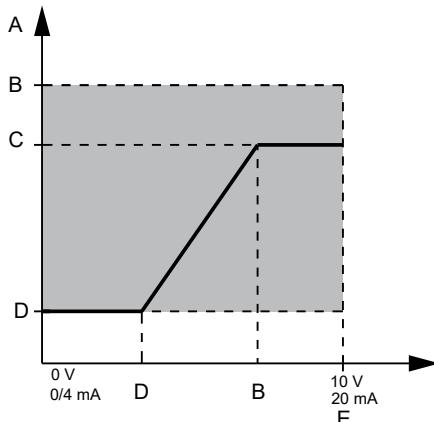

TM040626

External setpoint

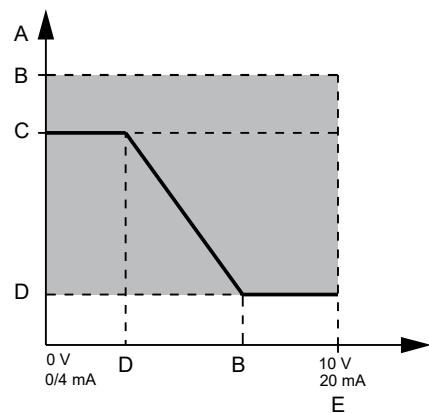

Pos.	Description
A	Actual setpoint
B	Max.
C	Setpoint, CUE menu
D	Min.
E	External setpoint signal

The minimum and maximum values of the external setpoint signal are default within the full-scale from 0-10 V (0/4-20 mA), but can be set in the [Main] menu group 200-1x "Setpoint Handling".

Reduced external setpoint signal

TM040363

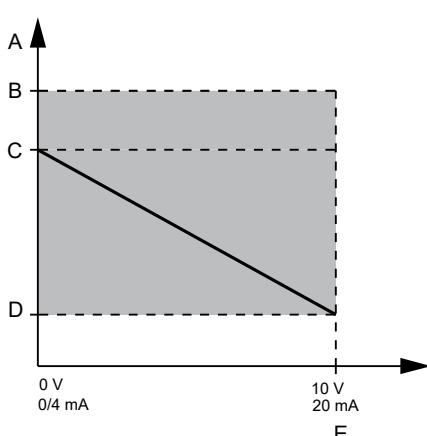

TM040365

Reduced inverse external setpoint signal

Pos.	Description
A	Actual setpoint
B	Max.
C	Setpoint, CUE menu
D	Min.
E	External setpoint signal

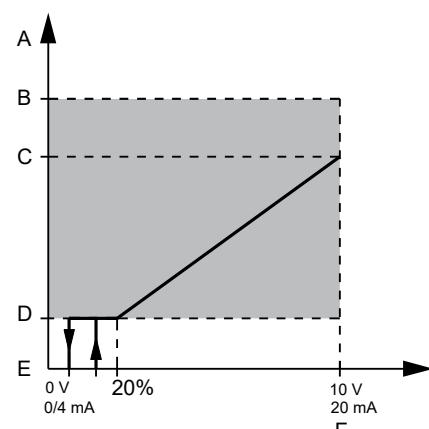

Inverse external setpoint

The actual setpoint is an inverse linear function of the external setpoint signal and is activated in [Main] menu parameter 200-10 "External setpoint".

TM040627

Inverse external setpoint signal

TM040364

External setpoint with stop function

Pos.	Description
A	Actual setpoint
B	Max.
C	Setpoint, CUE menu
D	Min.
E	Stop
F	External setpoint signal

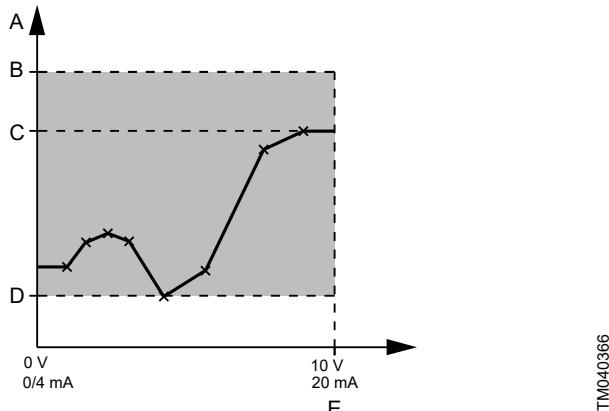

The maximum and minimum values of the external setpoint signal are default within the full-scale from 0-10 V (0/4-20 mA), but can be set in the [Main] menu group 200-1x "Setpoint Handling".

When the external setpoint signal is below 10 %, the operating mode is "Stop".

When the external setpoint signal is above 15 %, the operating mode is "Normal".

External setpoint based on a reference table

The actual setpoint is a piecewise linear function of the external setpoint signal and is activated in [Main] menu parameter 200-10 "External setpoint".

External setpoint based on a reference table

Pos.	Description
A	Actual setpoint
B	Max.
C	Setpoint, CUE menu
D	Min.
E	External setpoint signal

The linear function is defined as an interpolation between the points in a table. The table has up to eight points that are adjustable in the [Main] menu group 200-1x "Setpoint Handling".

Predefined setpoints

This function makes it possible to select up to seven predefined setpoints using one to three digital inputs.

The setpoints are selected as a binary coding of the digital inputs as shown in the table below. The predefined setpoints are adjustable in [Main] menu parameter 310 "Preset Reference".

Predefined setpoint	DI 2	DI 3	DI 4
15 %	x		
30 %		x	
45 %	x	x	
60 %			x
75 %	x		x
90 %		x	x
100 %	x	x	x

x = Closed contact

If none of the digital inputs are activated, the operating mode can be configured to "Stop" or to being controlled according to a setpoint set via the [Main] menu parameter 200-18 "Predefined Setpoint Zero Function".

If "Min.", "Max." or "Stop" is selected via the operating panel, the predefined setpoints are overruled.

Predefined setpoints cannot be influenced by the external setpoint input.

GENibus setpoint

If CUE is remote-controlled via the GENibus input, the setpoint is set via the bus.

The GENibus setpoint cannot be influenced by the external setpoint signal.

PID controller

CUE has a built-in PID controller for speed control of pumps. The factory setting of gain (K_p) and integral time (T_i) are automatically adjusted to suggested settings based on the chosen control mode. The values can easily be changed in the operating panel.

The controller can operate in both normal and inverse mode and is selected in parameter 20-81 "PID Normal/Inverse Control".

Normal mode

Normal mode is used in systems in which an increase in pump performance results in a rise in the value measured at the feedback sensor. This will typically be the case in most CUE applications.

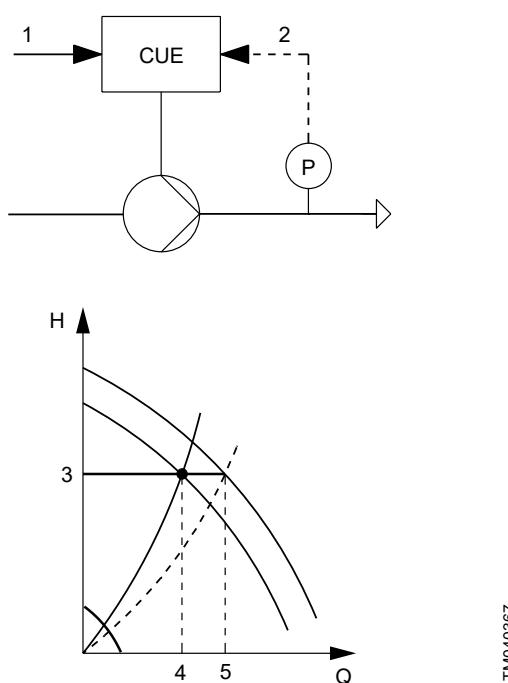

Inverse mode

Inverse mode is used in systems in which an increase in pump performance will result in a drop in the value measured at the feedback sensor. This mode will typically be used for constant level operation (emptying tank) and for constant temperature operation in cooling systems.

Negative K_p value corresponds to inverse mode.

Description

The PID controller compares the required setpoint (p_{set}) with the actual value (p) measured by the transmitter (P). See the figure below.

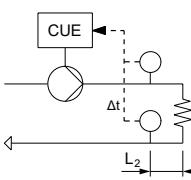

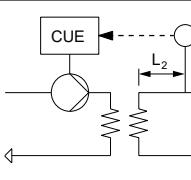

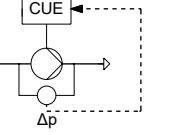

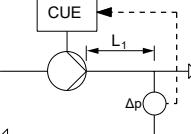

Constant pressure control

Pos.	Description
1	Setpoint p_{set}
2	Measured value p
3	P_{set}
4	Q
5	Q_{max}

If the measured value is higher than the required setpoint, the PID controller will reduce the speed and the performance of the pump until the measured value is equal to the required setpoint.

Suggested controller settings

System/application	K_p		T_i
	Heating system ²⁷⁾	Cooling system ²⁸⁾	
	0.2	0.5	
	0.2	0.5	
	0.2	0.5	
	-2.5	100	
	0.5	-0.5	$10 + 5L_2$

System/application	K_p		T_i
	Heating system ²⁷⁾	Cooling system ²⁸⁾	
	0.5		$10 + 5L_2$
	0.5	-0.5	$30 + 5L_2^{29)}$
	0.5		$0.5^{29)}$
	0.5		$L_1 < 5 \text{ m (16 ft): } 0.5^{29)}$ $L_1 > 5 \text{ m (16 ft): } 3^{29)}$ $L_1 > 10 \text{ m (32 ft): } 5^{29)}$

27) Heating systems are systems in which an increase in pump performance will result in a rise in temperature at the sensor.

28) Cooling systems are systems in which an increase in pump performance will result in a drop in temperature at the sensor.

29) $T_i = 100$ seconds (default).

L_1 = Distance in [m (ft)] between the pump and the sensor.

L_2 = Distance in [m (ft)] between the heat exchanger and the sensor.

The setting of gain (K_p) and integral time (T_i) can be manually changed in the operating panel via the [Main] menu group 20-9x "PID Controller".

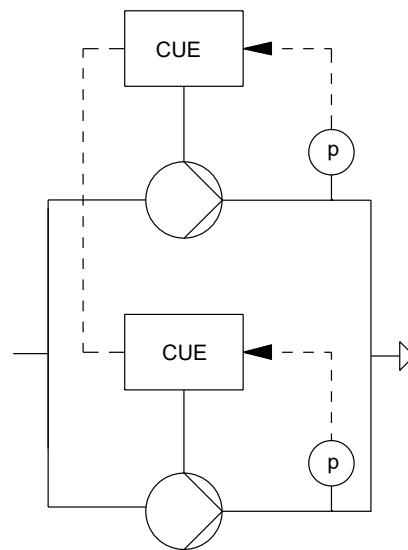

Duty/standby, duty/assist and cascade

Use the startup guide for setting the multipump system with the following options:

- No (used for CUE controlling single pumps)
- Variable and fixed speed
- Variable speed only.

Duty/standby

The built-in duty/standby function applies to "Variable speed only" pumps connected in parallel to ensure reliability of supply.

TM00368

Two pumps connected in parallel and controlled via Modbus RTU

The duty/standby function is set by choosing "Variable speed only" in the startup guide, then followed by setting the desired function to "Alternation" or "Back-up".

These are the primary purposes of the function:

- To let one pump run at a time.
- To start the standby pump if the duty pump stops due to an alarm.
- To alternate the pumps at least every 24 hours, only if alternation function is selected.

The two pumps are electrically connected by means of the Modbus RTU protocol on the GENIbus port.

The two pumps running duty/standby in this way cannot use the GENIbus interface for remote communication. The two pumps use their own local operating mode. See section Operating modes.

Both pumps must have the same control mode. See section Control modes.

Related information

[Operating modes](#)

[Control modes](#)

Duty/assist and variable-speed cascade

The duty/assist and variable-speed cascade functions are used to cascade additional variable speed pumps. Each pump is connected to a CUE unit. See the figure about two pumps connected in parallel and controlled via Modbus RTU.

Related information

[Duty/standby](#)

Setting the duty pump

The duty/assist function is set by selecting "Variable speed only" in the startup guide, then followed by setting the desired function to "Cascade".

If there are more than two pumps in the system, the duty CUE must be fitted with an MCO 101 option. The variable speed cascade function is then set by choosing "Variable speed only" in the startup guide, then followed by setting the total number of pumps in the system.

Setting one or more assist pumps

Use the startup guide to set the control mode to open loop, then confirm that the pump is an assist pump in a variable speed cascade system.

These are the primary purposes of the duty/assist function:

- To let the duty pump run all the time (except if low flow stop is activated).
- To start the assist pumps if the duty pumps cannot maintain the pressure.
- To start the assist pumps if the duty pump stops due to an alarm.

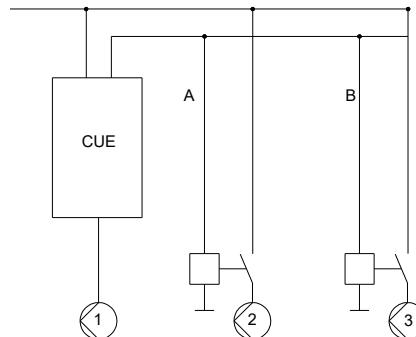

The cascade control ensures that the performance of the pumps is automatically adapted to consumption by switching on or off pumps and by changing the speed of the pumps in operation. This makes the system run as energy-efficiently as possible with a limited number of pumps.

When more than one pump is running in steady state, the pumps run at the same speed and are controlled by the PI controller of the master pump. As standard, the pump with the lowest number is the duty pump.

The pumps running duty/assist in this way cannot use the GENIbus interface for remote communication.

Fixed speed cascade

The fixed speed cascade function is used to cascade additional fixed speed pumps. Only one duty pump is connected to a CUE unit. See the figure below.

TM075451

One duty pump connected with two fixed speed pumps controlled via relays

Pos.	Description
A	Relay 1
B	Relay 2

The fixed speed cascade function is set by selecting "Variable and Fixed speed" in the startup guide, then followed by setting the total number of pumps in the system. When "Variable and Fixed speed" is selected, this pump runs as a duty pump in the fixed speed cascade system. The following steps must be performed:

- For a two-pump setup: Relay 1 is automatically set to activate or deactivate one fixed speed pump based on pressure demand.
- For a three-pump setup: Relay 1 and Relay 2 are automatically set to activate or deactivate one additional fixed speed pump at the same time based on pressure demand.

These are the primary purposes of the function:

- To let the duty pump run all the time (except if low flow stop is activated).
- To start the fixed speed pumps if the system pressure decreases below 90 % of the setpoint.
- To stop the fixed speed pumps if the system pressure increases above 110 % of setpoint.

The cascade control ensures that the performance of the pumps is automatically adapted to consumption by switching on or off pumps and by changing the speed of the duty pump in operation.

Dry running

This function protects the pump against dry running. When lack of inlet pressure or water shortage is detected, the pump is stopped before being damaged.

Lack of inlet pressure or water shortage can be detected in three ways:

- With a switch connected to a digital input configured to dry-running protection.
- CUE checks if the shaft power is below a dry-pump limit for a configurable time.
- CUE checks if the pressure cannot be reached at full speed for a configurable time.

Note that the dry-running function requires a sensor. This means that the function will not work in open loop. These conditions must be present to activate the dry-running alarm: The power consumption must be below a certain level (set by the parameters), and the pump must run at full speed (handled by the control mode and the sensor). CUE increases the speed to maximum if no water is present. Without a sensor, it will not work!

Setting the dry run protection based on a switch connected to a digital input

The use of a digital input requires an accessory, such as these:

- a pressure switch installed on the suction side of the pump
- a float switch installed on the suction side of the pump.

See section Accessories for more information on the required sensors. The pump cannot restart if the input is activated. Restart may be delayed by up to 30 minutes, depending on the pump family.

The digital inputs of CUE (terminals, 18, 19, 27, 29, 32, 33) can be set individually to different functions in [Main] menu parameter group 5-1x "Digital Inputs".

Select dry running to activate the detection based on a switch.

Setting the dry run protection based on a shaft power

The use of shaft power requires an actual power reading at two frequencies.

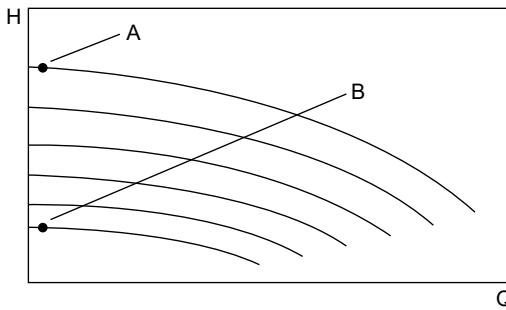

Procedure without pump curve: After completing the startup guide follow the steps:

- Close the valve. No flow is required during the test.
- Press Hand on and set the speed to 50 % (30 Hz or equivalent RPM). CUE starts the pump.
- Go to [Main] menu parameter 16-10 "Power [kW]" and read the input power. Make a note of the low limit value.
- Press [Home] to return to the status screen.
- Press Hand on and set the speed to 90 % (54 Hz or equivalent RPM). CUE starts the pump.
- Go to [Main] menu parameter 16-10 "Power [kW]" and read the input power. Make a note of the high limit value.
- Stop CUE and open the valve.

Procedure with pump curve:

Go to Grundfos Product Center and enter the part number for your pump:

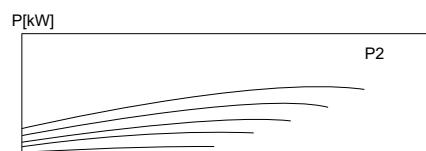

- Enter "Show advanced options".
- Go to "Hydraulic layout" and set variable speed to "Yes".
- Click on the pump curve to set the duty point as close to f_{min} . and enter Q to 0.1 as Operating point. See fig. QH curve for variable speed pump for choosing low flow operating points.
- Read out power (P2) and speed (n) as low limit values. See fig. QP curve for variable speed pump for reading P2 at low flow.
- Click on the pump curve to set the duty point as close to 90 % speed and enter Q to 0.1 as Operating point. See fig. QH curve for variable speed pump for choosing low flow operating points.
- Read out power (P2) and speed (n) as high limit values. See fig. QP curve for variable speed pump for reading P2 at low flow.

TM07560

QH curve for variable speed pump for choosing low flow operating points

Pos.	Description
A	90 % of f_{max}
B	f_{min}

TM075610

QP curve for variable speed pump for reading P2 at low flow

The data must be entered in [Main] menu parameter group 22-3x "No-flow Power Tuning" as follows:

- 22-32 "Low Speed [RPM]" or 22-33 "Low Speed [Hz]" = 30 Hz
- 22-34 "Low Speed Power [kW]" = the power readout at Low limit in previous procedure
- 22-36 "High Speed [RPM]" or 22-37 "High Speed [Hz]" = 54 Hz
- 22-38 "High Speed Power [kW]" = the power readout at High limit in previous procedure.

Activate the desired protection function, for example an alarm, in [Main] menu parameter 22-26 "Dry Pump Function".

The dry-running stop function has now been set correctly. The time setting is 10 seconds from no-flow delay (22-24) + 10 seconds from dry-running detection delay (22-27) = 20 seconds.

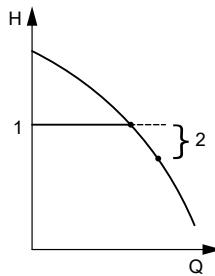

Setting the dry run protection based on an end of curve

CUE will by default issue an alarm at end of curve. This will also occur under the dry run conditions of water shortage and no flow.

In constant pressure control mode, the end of curve is detected if the pressure is below a 20 % tolerance of the sensor range of the setpoint and the pump is running at maximum speed for a 10-second delay. The pump cannot build up the setpoint pressure due to water shortage.

The end of curve tolerance, delay and protection function can be adjusted in [Main] menu parameter group 22-5x "End of Curve".

Example: A constant pressure system with 0-16 bar sensor and setpoint at 11.75 bar (120 m head) gives an end of curve alarm if the pressure is below (11.75 bar - 20 % x 16 bar) = 8.55 bar and the pump is running at maximum speed.

TM075611

Curve tolerance

Pos.	Description
1	H_{set}
2	H tolerance

Dry-running detection based on end of curve also gives an alarm, if there is actual water and the system head curve shifts to high flow range; this means that the function may need to be adjusted to work properly in the high flow area.

Start adjustments

Start delay

The start delay after power-on is a delay between power being applied and the pump starting.

TM040621

Start delay after power-on

Pos.	Description
1	Power-on
2	Start CUE
3	Start delay
4	Time

The purpose is to allow the remote-control equipment to start up before the pump.

The start delay is deactivated if a remote command is received via GENIbus.

This can be set in [Main] menu parameter 1-71 "Start Delay".

Flying start

This function makes it possible to catch a motor that is spinning freely due to a mains drop-out. This prevents a high current draw from CUE by starting on a rotating motor.

When flying start is enabled, the start delay function is not active.

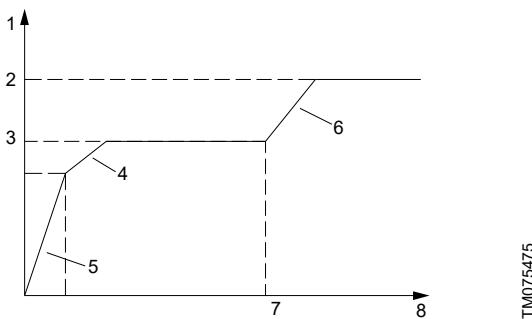

This can be set in [Main] menu parameter 1-73 "Flying Start".

Pipe fill

This function is used for filling empty pipes with water in a controlled manner. If the function is not activated, pipes will be filled at maximum speed. In pressure-controlled systems where pipes are empty at startup, high speed will cause water hammer until the speed has been reduced to fit the actual demand.

Water hammer can be prevented by introducing a pipe fill sequence before the system is running normal operation. The pipe fill function can limit the speed of the pump when filling pipes, and thus reduce water hammer in filled pipes. A time limit or a pressure can be set to deactivate the pipe fill function and turn CUE into normal operation.

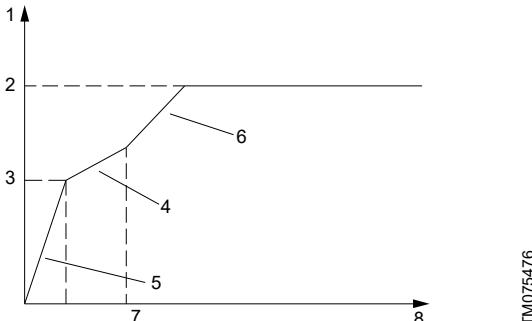

As the pressure in horizontal pipe systems does not climb as the system fills, filling horizontal pipe systems requires a user-specified speed and time to fill the pipes or until a user-specified pressure setpoint is reached.

Horizontal pipe system

Pos.	Description
1	Speed
2	Max. speed
3	Min. speed
4	Normal ramp
5	Initial ramp
6	Closed loop
7	Fill time or filled setpoint
8	Time

In a vertical pipe system it's recommended to use the PID function to ramp the pressure at a user-specified rate between the motor speed low limit and a user-specified pressure.

Vertical pipe system

Pos.	Description
1	Speed
2	Max. speed
3	Min. speed
4	Fill rate unit/sec.
5	Initial ramp
6	Closed loop
7	Filled setpoint
8	Time

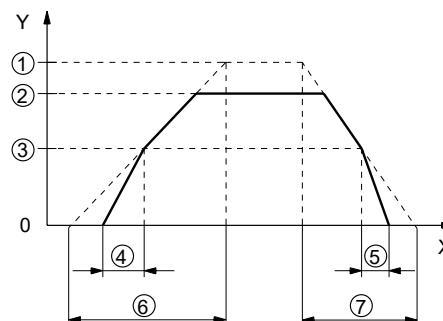

Activation or deactivation is done in parameter 29-00 "Pipe Fill Enable".

Operation

Ramps

The CUE startup guide incorporates adjustment of two types of ramp:

- ramp-up and ramp-down
- initial and final ramps.

Ramp-up and ramp-down of CUE

Pos.	Description
X	Time
Y	Speed
1	Nominal
2	Max.
3	Min.
4	Initial ramp
5	Final ramp
6	Ramp-up
7	Ramp-down

The ramp-up and ramp-down are used for protection against overload when starting and stopping CUE, and the time is defined as acceleration time from 0 min^{-1} to nominal motor speed and the deceleration time from nominal motor speed to 0 min^{-1} , respectively. The settings are manually set in parameter 3-41 "Ramp 1 Ramp Up Time" and 3-42 "Ramp 1 Ramp Down Time" of the operating panel.

The initial and final ramps prevent operation for a longer time than necessary at speeds below minimum speed.

The setting is done automatically based on the pump family selected in the startup guide.

Operating range

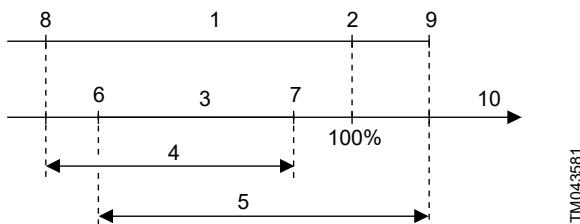

How to set the operating range:

- Set the minimum speed within the range from a pump-dependent minimum speed to the adjusted maximum speed. The factory setting depends on the pump family.
- Set the maximum speed within the range from the adjusted minimum speed to the pump-dependent maximum speed. The factory setting is equal to 100 %, meaning the speed stated on the pump nameplate.

The area between the minimum and maximum speed is the actual operating range of the pump.

The operating range can be changed by the user within the pump-dependent speed range.

For some pump families, oversynchronous operation (maximum speed above 100 %) will be possible. This requires an oversize motor to deliver the shaft power required by the pump during oversynchronous operation.

Setting of the minimum and maximum curves in percentage of maximum performance

Pos.	Description
1	Pump-dependent speed range
2	Nominal speed
3	Actual speed range
4	Max. speed, adjusted
5	Max. speed, adjusted
6	Min.
7	Max.
8	Min. speed
9	Max. speed
10	Speed [%]

Minimum and maximum speed can manually be overwritten in parameter 4-11 "Motor Speed Low Limit" and 4-13 "Motor Speed High Limit", respectively. Note that the maximum speed cannot exceed the maximum output frequency set in parameter 4-19.

Running outside the pump-dependent minimum and maximum speeds may damage the pumps.

Skip bands

Some systems require that certain output frequencies or speeds are avoided due to resonance problems in the system.

- If CUE is in [RPM] mode, enter the lower limit of the speeds to be avoided in parameter 4-60[0] and the upper limit in parameter 4-62[0].
- If CUE is in [Hz] mode, enter the lower limit of the speeds to be avoided in parameter 4-61[0] and the upper limit in parameter 4-63[0].

A maximum of four frequency or speed ranges can be avoided in rare cases. To add more skip bands, use index 1, 2 or 3 for the above mentioned parameters.

Stop adjustments

Standstill heating preheats the motor during standstill to avoid condensation within the motor.

When the pump is stopped by a stop command, a current will be applied to the motor windings in order to keep the temperature within the motor above the dew point temperature. No external heater is needed.

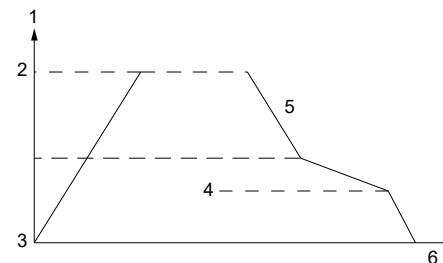

The preheating of the motor is especially important when the motor is installed under these conditions:

- high humidity
- outdoor installation.

The consequences of condensed moisture within the motor are for example corrosion damage to electrical contacts and the bearings of the motor shaft.

This can be activated in parameter 1-80 "Function at Stop".

Check valve ramps

Check valve ramp

Pos.	Description
1	Speed
2	Motor speed high
3	Motor speed low
4	Check valve end speed
5	Normal ramp
6	Time

To protect ball check valves in a stop situation, the check valve ramp time can be utilised as a temporary slower ramp rate. When parameter 3-85 "Check Valve Ramp Time" is different from 0 s, the check valve ramp time is effectuated between motor speed low and check valve end speed.

Set the check valve end speed where the check valve is expected to be closed and the check valve is no longer active.

Over-voltage control (OVC)

When deceleration is too fast in case of higher inertia, the braking energy can cause an over voltage in CUE. This can be overcome by enabling over-voltage control in [Main] menu parameter 2-17, and CUE automatically prolongs the deceleration times; normal ramps, final ramps, and check valve ramps to stop CUE without an alarm.

Pump motor protection

Motor temperature

The motor thermal protection can be activated in [Main] menu parameter 1-90 "Motor Thermal Protection" and can be implemented using a range of techniques:

- By a PTC sensor in the motor windings connected to one of the analog or digital inputs, parameter 1-93 "Thermistor Source".
- By calculation (ETR = Electronic Thermal Relay) of the thermal load based on the actual load and time. The calculated thermal load is compared with the rated motor current and the rated motor speed. If parameter 1-91 "Motor External Fan" is set to Yes, the motor must have forced cooling and the ETR does not take motor speed into consideration.
- By a mechanical thermal switch (Klixon type). Parameter 1-93 "Thermistor Source".

For the North American market: the ETR functions provide class 20 motor overload protection in accordance with NEC.

Motor bearing monitoring

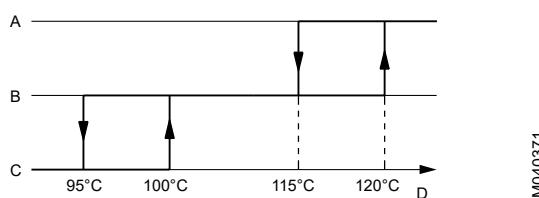

This function is used to give an indication when it is time to relubricate or replace the motor bearings.

It shows these information:

- When to relubricate the motor bearings.
- When to replace the motor bearings.

The function is based on the running hours of the pump, and shows a notification on the display to lubricate the bearings after 5000 running hours and replace the bearings after 20000 running hours.

Monitoring of motor bearing temperature using an MCB 114 sensor input module and Pt100/Pt1000 sensors measuring the bearing temperature can also be used to issue a warning. An alarm is generated if the bearing temperature gets too high. Warnings and alarms are generated and reset by using hysteresis.

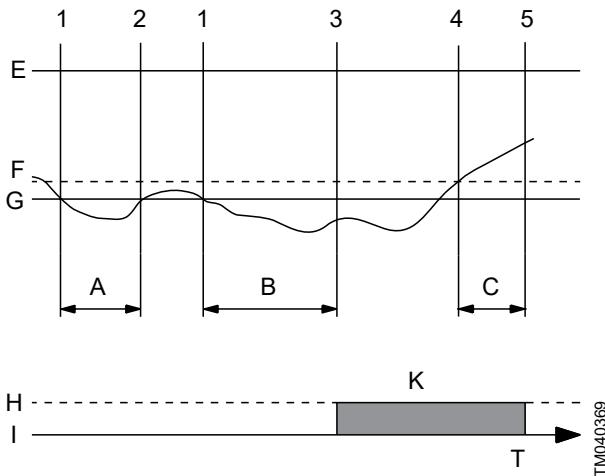

Monitoring of bearing temperature with warning and alarm limits

Pos.	Description
A	Alarm limit
B	Warning limit
C	Normal
D	Temperature

Limit exceed

CUE has two independent limit exceed functions.

These are monitoring functions offering information, warning, alarm, or change of operating mode when a low or high limit is exceeded.

Example of low limit exceeded

Pos.	Description
E	High limit
F	Hysteresis
G	Low limit
H	On
I	Off
K	Limit exceeded
T	Temperature

The two limit exceed functions are set in [Main] menu parameter group 201-0x "Limit Exceed". Parameters are grouped so that Limit Exceed 1 are set in index 0 and Limit Exceed 2 are set in index 1.

The default setting of this function is "Not active" and is activated in parameter 201-00 by setting to Enabled or Enabled with event action.

The function has two timers: a detection delay timer and a reset delay timer, that are adjustable in parameters 201-06 and 201-07, respectively.

The limits can either be a high or a low limit adjusted in parameter 201-01, and the actual limit value must be entered in parameter 201-04.

The detection delay timer starts when a limit is exceeded (1). See the figure above.

- A: If the limit is no longer exceeded (2) when the detection time expires, the timer is reset.

- B: If the limit is still exceeded (3) when the detection time expires, the output of the detector will change to "Limit exceeded". The reset delay timer starts when the detector output is "Limit exceeded" and the limit is no longer exceeded, using hysteresis (4).
- C: When the delay time has expired (5), the detector output changes to "Limit not exceeded".

Input possibilities

It is possible to have two limit exceeded functions in parallel with these inputs set in parameter 201-02:

- all analog inputs
- all Pt100/Pt1000 inputs (this requires an MCB 114 sensor input module)
- internal measured values; Power consumption (P2), Motor speed, or Motor current.

Output possibilities

There are these output possibilities:

- signal relay 1 and 2 activated in parameters 5-40[0] and 5-40[1], respectively
- digital output activated in parameters 5-30 and 5-31 respectively
- analog output activated in parameter 6-50.

Event actions

Change of operating mode as event action is set in parameter 201-03.

- Warning only
- Stop
- Maximum speed
- Minimum speed
- User curve speed.

The default setting of this function is "Not active".

Digital and Analog I/O

CUE digital inputs can be configured to either PNP or NPN mode in [Main] menu parameter 5-00 "Digital I/O Mode":

- NPN - Active at 0 V
- PNP - Active at 24 V.

CUE has six terminals for digital input and output functions:

Terminal No.	Name	Parameter	Default	I/O mode
18	DI 1	5-10	Start	-
19	DI 2	5-11		-
27	DI/O 1	5-12 for input or 5-30 for output		5-01
29	DI/O 2	5-13 for input or 5-31 for output	No operation	5-02
32	DI 3	5-14		-
33	DI 4	5-15		-

Digital input functions

- Reset: Used to reset an alarm manually from external signal.

- Coast: Used to immediately stop the pump without ramping down. Pump will stop free-wheeling.
- Start: Used to start the pump manually in [Auto on] mode.
- Reversing: Used to reverse the motor speed. Do not use this function on a pump.
- Jog: Used to set the motor speed fixed to Jog Speed [Hz] of parameter 3-11.
- Preset ref bit 0 through 2: Used to set the pump setpoint fixed to values of parameter 3-10.
- Freeze output: Used to continue pump speed at current speed.
- Hand/Auto start: Selects hand or auto start. High signal selects auto on only. Low signal selects hand on only.
- Hand start: A signal applied to put CUE into hand-on mode as if [Hand On] has been pressed and a normal stop command is overridden.
- Auto start: A signal applied to put CUE into auto-on mode as if [Auto On] has been pressed and a normal stop command is overridden.

Note that if disconnecting the signal, the motor stops. To make any other start commands valid, assign another digital input to [54] Auto Start and apply a signal to this. [Hand On] and [Auto On] have no impact. [Off] overrides local start and auto start. Press either [Hand On] or [Auto On] to make local start and auto start active again. If there is no signal on neither [53] Hand start nor [54] Auto start, the motor stops regardless of any normal start command applied. If a signal is applied to both [53] Hand start and [54] Auto start, the function is auto start. If pressing [Off], the motor stops regardless of signals on [53] Hand start and [54] Auto start.

- Min.: Changes the operating mode to Min. See section Operating modes.
- Max.: Changes the operating mode to Max. See section Operating modes.
- User curve: Changes the operating mode to User curve. See section Operating modes.

Note that most functions are available with and without inverse. Choose with inverse if you want a specific function to be activated opposite than the PNP or NPN mode.

Related information

Operating modes

Digital and Relay output functions

- Control ready: The control board receives supply voltage.
- Drive ready: CUE is ready for operation and applies a supply signal on the control board.
- Drive ready/remote control: CUE is ready for operation and is in auto-on mode.
- Standby/no warning: CUE is ready for operation. No start or stop command has been given (start/disable). There are no warnings.
- Running: The pump is running.
- Running/no warning: The pump is running and there are no warnings.
- Run on reference/no warning: The motor runs at reference speed.
- Alarm: An alarm activates the output.
- Alarm or warning: An alarm or a warning activates the output.
- At torque limit: The torque limit set in parameter 4-16 "Torque Limit Motor Mode" has been exceeded.
- Torque limit and stop: Used in performing a coast stop and in torque limit condition. If the frequency converter has received a stop signal and is at the torque limit, the signal is logic 0.
- Out of current range: The motor current is outside the range set in parameter 4-18 "Current Limit".
- Below current, low: Motor current is lower than the setting in parameter 4-50 "Warning Current Low".
- Above current, high: Motor current is higher than the setting in parameter 4-51 "Warning Current High".
- Out of speed range: Output speed is outside the ranges set in parameter 4-52 "Warning Speed Low" and parameter 4-53 "Warning Speed High".

- Below speed, low: Output speed is lower than the setting in parameter 4-52 "Warning Speed Low".
- Above speed, high: Output speed is higher than the setting in parameter 4-53 "Warning Speed High".
- Out of feedback range: Feedback is outside the ranges set in parameter 4-56 "Warning Feedback Low" and parameter 4-57 "Warning Feedback High".
- Below feedback low: Feedback is below the limit set in parameter 4-56 "Warning Feedback Low".
- Above feedback high: Feedback is above the limit set in parameter 4-57 "Warning Feedback High".
- Thermal warning: The thermal warning turns on when the temperature exceeds the limit in the motor, the CUE, or the thermistor.
- Bus OK: Active communication (no timeout) via the serial communication port.
- Out of ref range: Reference is outside the ranges set in parameter 4-54 "Warning Reference Low" and parameter 4-55 "Warning Reference High".
- Below reference low: The reference is below the limit set in parameter 4-54 "Warning Reference Low".
- Above reference high: The reference is above the limit set in parameter 4-55 "Warning Reference High".
- Comparator 0 through 5: The signal outputs correspond to the logic output of [Main] menu parameter group 13-1x "Comparators".
- Logic Rule 0 through 5: The signal outputs correspond to the logic output of [Main] menu parameter group 13-4x "Logic Rules".
- Running reverse: CUE is running counterclockwise.
- Start command active: CUE has received an active start command, for example auto on, and a start command via digital input or bus is active or [Hand On]. It is not necessarily running.
- Drive in hand mode: CUE is in hand-on mode (as indicated by the indicator light above [Hand on]).
- Drive in auto mode: CUE is in auto-on mode (as indicated by the indicator light above [Auto on]).
- Preventive Maintenance: One or more of the preventive maintenance events has passed the time for the specified action.
- Deragging: Deragging procedure is active.
- AHF Capacitor Connect: Automatic control of AHF capacitor connect at low loads under 20 %.
- External Fan Control: External fan control is active.
- No-Flow: A no-flow situation or minimum speed situation has been detected.
- Dry Pump: A dry pump condition has been detected.
- End of Curve: An end of curve condition has been detected.
- Sleep Mode: CUE has entered sleep mode.
- Pipe Filling: Active when the pipe fill function is operating.

Analog outputs

The analog output (0-20 mA) can be set in [Main] menu parameter 6-50 to one of these indications:

- feedback value
- speed
- frequency
- motor current
- external setpoint input
- limit exceeded.

The analog output is set to not active by default.

- Feedback value: The output signal is a function of the actual feedback value.
- Speed: The output signal is a function of the actual pump speed.
- Frequency: The output signal is a function of the actual frequency.
- Motor current: The output signal is a function of the actual motor current.
- External setpoint input: The output signal is a function of the external setpoint input.
- Limit exceeded: The output signal is on/off when the limit is exceeded: Off = 0/4 mA and On = 20 mA.

MCB 114 sensor input module

The MCB 114 sensor input module offers three additional analog inputs for CUE:

- one analog 0/4-20 mA input for an additional sensor
- two analog Pt100/Pt1000 inputs for temperature sensors.

Sensor 2

The analog 0/4-20 mA input is used for these functions:

- Monitoring the measured value of sensor 2 (default setting).
- Measured value of sensor 2 used for control purpose. This makes differential pressure control possible by using measurements from sensor 1 and sensor 2 (setting by means of PC Tool).

Temperature sensors 1 and 2

The analog Pt100/Pt1000 inputs are used for monitoring these temperatures:

- drive-end motor bearing
- non-drive-end motor bearing
- other liquid 1
- other liquid 2
- motor windings
- pumped liquid
- ambient temperature.

Displays

MCB 114 input	Displays	
	Reading	Setting
Sensor 2	2.5	3.16
Temperature sensor 1	2.12	3.21
Temperature sensor 2	2.13	3.22

Further information

See also the TPE Installation and operating instructions.

Auto/manual restart after alarm

In case of an alarm, CUE will stop the pump. Pump operation will be resumed when the cause of the alarm has been remedied and the alarm has been reset automatically or manually.

CUE can be configured to activate and deactivate automatic restart in [Main] menu parameter 14-20, and in case of automatic reset, the delay between reset attempts is adjustable in [Main] menu parameter 14-21.

15. Communication

Communication with TPE2, TPE2 D, TPE3, TPE3 D, TPE, TPED pumps

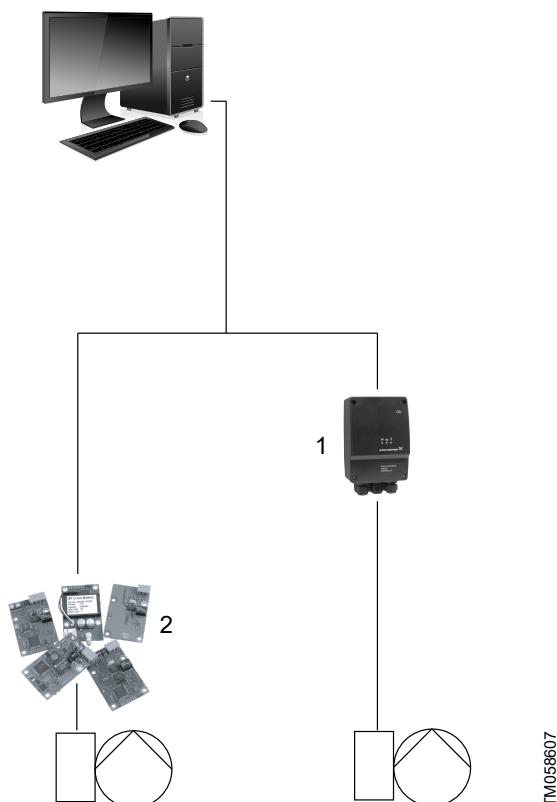

Communication with TPE2, TPE2 D, TPE3, TPE3 D, TPE, TPED pumps is possible via a central building management system, remote control, Grundfos GO, or control panel.

Central building management system

The operator can communicate with a TPE2, TPE2 D, TPE3, TPE3 D, TPE, TPED pump at a distance. Communication can take place via a central building management system allowing the operator to monitor and change control modes and setpoint settings. The CIU module can be used for all TPE versions, but the CIM module can only be used in some of the TPE pumps. See the table below.

TPE version	CIM	CIU
TPE2, TPE2 D, TPE3, TPE3 D	•	•
TPE, TPED up to 22 kW	•	•
TPE from 30 kW		•

- Available.

Structure of a central building management system

Pos.	Description
1	CIU 100: LonWorks
	CIU 150: PROFIBUS DP
	CIU 200: Modbus RTU
	CIU 250: GSM
	CIU 270: GRM
	CIU 300: BACnet MS/TP
	CIU 500: Modbus TCP
2	CIU 500: PROFINET IO
	CIM 100: LONworks
	CIM 150: PROFIBUS DP
	CIM 200: Modbus RTU
	CIM 260: 3G/4G cellular

	CIM 500: EtherNet/IP
	CIM 500: GRM IP

Remote control

The operator can monitor and change control modes and settings of the pump with Grundfos GO. See section Grundfos GO.

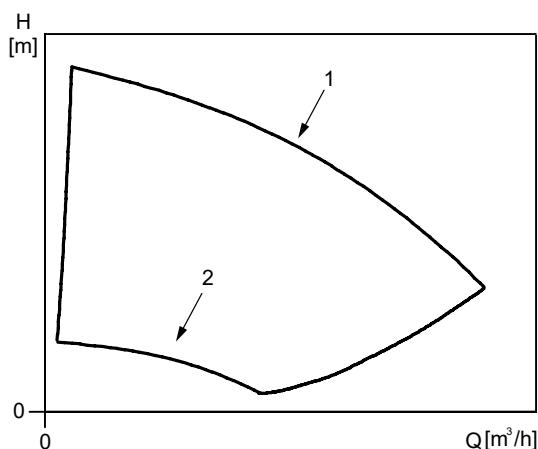

16. Speed regulation of TPE, TPED, TPE2, TPE2 D, TPE3, TPE3 D pumps

Affinity equations

Normally, the pumps are used in applications characterised by a variable flow rate. Consequently, you cannot select a pump that is constantly operating at its optimum efficiency.

In order to achieve optimum operating economy, the duty point must be close to the optimum efficiency, eta, for most operating hours.

Between the minimum and maximum performance curves, the pumps have an infinite number of performance curves each representing a specific speed. Therefore, you may not be able to select a duty point close to the maximum curve.

Minimum and maximum performance curves

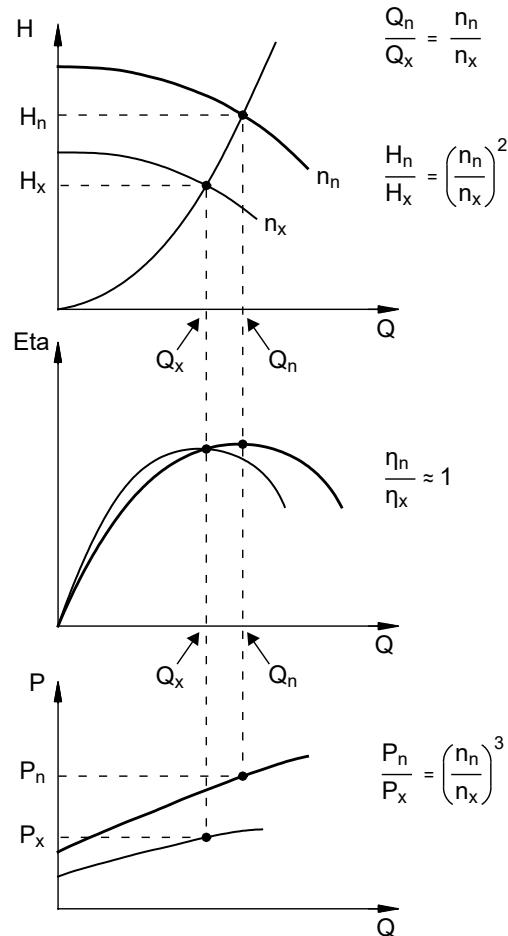

Pos.	Description
1	Maximum curve
2	Minimum curve

In situations where you can select a duty point close to the maximum curve, use the affinity equations below. The head, H, the flow rate, Q and the input power, P, are the appropriate variables you need for calculating the motor speed, n.

Note: The approximated formulas apply on condition that the system characteristic remains unchanged for the rated motor speed and the current motor speed, and that it is based on the following formula: H is equal to k x Q² where k is a constant.

The power equation implies that the pump efficiency is unchanged at the two speeds. In practice, this is not quite correct.

Finally, it is worth noting that the efficiencies of the frequency converter and the motor must also be taken into account if you want a precise calculation of the power saving resulting from a reduction of the pump speed.

Affinity equations

Legend

H _n	Rated head in metres
H _x	Current head in metres
Q _n	Rated flow rate in m ³ /h
Q _x	Current flow rate in m ³ /h
n _n	Rated motor speed in min ⁻¹
n _x	Current motor speed in min ⁻¹
η _n	Rated efficiency in %
η _x	Current efficiency in %
P _n	Rated power in kW
P _x	Current power in kW

Grundfos Product Center

Grundfos Product Center can help you select the right pump according to your requirements. See section Grundfos Product Center.

17. Control of pumps in parallel

In some applications, parallel pump operation is required for one or more of the following reasons:

- One pump cannot achieve the required performance, flow rate.
- Standby performance is required to ensure reliability of supply.
- Overall efficiency needs to be improved in case of big variations in the flow demand.

The table below lists the different possibilities of controlling pumps connected in parallel.

Parallel-operation control possibilities	TP	TPE2	TPE2 D	TPE3	TPE3 D	TPE, TPED Series 2000		TPE, TPED Series 1000		TPE Series 2000 TPE Series 1000	
						TPE	TPED	TPE	TPED	TPE	TPED

Control MPC											
	•	•						•			•
Control MPC Series 2000											
				•		•					

● Available.

○ Available on request.

Alternation/standby function

The alternation/standby function is activated from factory and "Alternating" mode is selected as default. See section Alternating operation.

Pumps connected to Control MPC

You can connect TP, TPE Series 1000, TPE2 pumps directly to Grundfos Control MPC.

Control MPC incorporates a CU 352 control unit that can control up to six pumps.

By means of an external sensor, Control MPC can ensure optimum adaptation of the performance to the demand by closed-loop control of these parameters:

- proportional differential pressure
- constant differential pressure
- differential pressure (remote)
- flow rate
- temperature.

CU 352 incorporates features such as those below:

Startup wizard

Correct installation and commissioning is a prerequisite for attaining optimum performance of the system and trouble-free operation year in and year out.

During commissioning of the system, a startup wizard is shown on the display of CU 352. The wizard guides the operator through the various steps via a series of dialogue boxes to ensure that all settings are done in the correct sequence.

Application-optimised software

CU 352 incorporates application-optimised software which helps you set your system to the application in question.

Furthermore, navigating through the menus of the control unit is done in a user-friendly way. You do not need any training to be able to set and monitor the system.

Ethernet connection

CU 352 incorporates an ethernet connection which makes it possible to get full and unlimited access to the setting and monitoring of the system via a remote PC.

Service port, GENI TTL

The service port of CU 352 enables easy access to updating software and data logging in service situations.

External communication

Control MPC enables communication with other fieldbus protocols. In order to communicate with other fieldbus protocols, a GENIbus module and a gateway are required.

Control MPC can communicate with LonWorks, PROFIBUS, Modbus, BACnet, GSM/GPRS or GRM via Grundfos CIU.

Pumps connected to Control MPC Series 2000

TPE Series 2000, TPE3 pumps are connected directly to Grundfos Control MPC Series 2000 via GENIbus.

Control MPC Series 2000 incorporates a CU 352 control unit that can control up to six pumps.

All pumps must be of the same type and size.

Control MPC Series 2000 is used for controlling circulator pumps in heating and air-conditioning applications.

Control MPC Series 2000 ensures optimal adaptation of the performance to the demand by closed-loop control of these parameters:

- proportional differential pressure
- constant differential pressure.

By means of an external sensor Control MPC Series 2000 can also ensure optimum adaptation of the performance to the demand by closed-loop control of these parameters:

- differential pressure (remote)
- flow rate
- temperature.

Note : For further information about Control MPC and Control MPC Series 2000, see the data booklet "Control MPC". The data booklet is available online in Grundfos Product Center. See section Grundfos Product Center.

18. Grundfos GO Link

The product is designed for wired or wireless communication with Grundfos GO Link.

Grundfos GO Link enables you to set functions and gives you access to status overviews, configuration and current operating parameters.

Use Grundfos GO Link together with these interfaces:

- Ethernet cable (Only FM310 and FM311)
- Grundfos MI 301 - USB - Wired/wireless (Only HMI 100, HMI 200 and HMI 300)
- Grundfos MI 301 - USB - Wired/wireless (Only HMI 200 and HMI 300)
- Grundfos PC Tool Link - USB - Wired

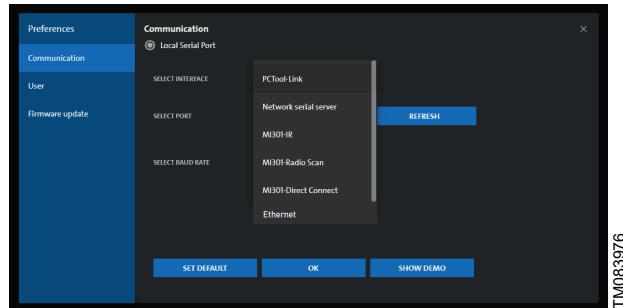

Grundfos GO Link setup

Pos.	Description
1	Ethernet cable: Standard Ethernet cable CAT5/CAT6.
2	Grundfos MI 301: Separate module enabling radio communication. Use the module together with a USB cable to connect to a laptop.
3	Grundfos PC Tool Link: Separate module enabling wired connection to the pump. Use the module together with a USB cable to connect to a laptop.

Communication

When Grundfos GO Link initiates communication with the product, it is done using different verification methods.

Select the interface connected to the pump:

Ethernet

Wired connection can take place using an Ethernet cable connected directly between a laptop and the RJ45 interface in the pump or via a local network having both the pump and the laptop connected to the same network. To establish a secure connection between the laptop and the pump, the user will have to go through a verification process.

Connecting to a pump can either happen by scanning for a connected product, which can be a direct Ethernet connection, or the pump is connected to a local network or a connection via the pump IP address.

Initiate connection from Grundfos GO Link and follow onscreen instructions.

Grundfos MI 301

Radio communication can take place at distances up to 30 metres. The first time Grundfos GO Link communicates with the product, you enable communication by pressing the **Radio communication** button or **OK** on the operating panel. Select either MI301-Direct connect or MI301-Radio. When communication takes place, the product is recognized by Grundfos GO Link, and you can connect using Direct connect or Radio scan without having to run a verification.

Radio communication can take place at distances up to 98 ft (30 m). The first time Grundfos GO Link communicates with the product, you enable communication by pressing the **Radio communication** button or **OK** on the operating panel. Select either MI301-Direct connect or MI301-Radio. When communication takes place, the product is recognized by Grundfos GO Link, and you can connect using Direct connect or Radio scan without having to run a verification.

Grundfos PC Tool Link

Wired connection can take place using Grundfos PC Tool connected to the AYB terminals of the pump. Since Grundfos GO Link is wired to the pump within a short distance, no verification is needed. A direct connection will be established.

19. Grundfos CUE

TP pumps connected to Grundfos CUE, external frequency converters

GR-1031505

Grundfos CUE

Grundfos CUE is a complete range of wall-mounted frequency converters for pump control in a wide range of applications.

The frequency converter provides a variety of benefits, such as these:

- Grundfos E-pump functionality and user interface
- application- and pump family-related functions
- increased comfort compared to fixed-speed pump solutions
- simple installation and commissioning compared to standard frequency converters
- speed control of pumps up to 250 kW.

Functions

Intuitive startup guide

The startup guide enables easy installation and commissioning as well as plug-and-pump convenience. Few settings need to be made by the installer as the rest is done automatically or preset from the factory.

Smart user interface

GR-1031498

Grundfos CUE user interface

The frequency converter features a unique user-friendly control panel with graphic display and easy-to-use buttons.

Controlling the value you choose

The frequency converter has a built-in PI controller offering closed-loop control of a desired value, such as these:

- constant differential pressure
- proportional pressure
- constant temperature
- constant pressure
- constant flow rate.

Wide product range

The CUE product range is quite comprehensive, covering five different voltage ranges, enclosure classes IP20/21 (NEMA 1) and IP54/55 (NEMA 12), and a wide range of output powers.

The table below provides a general overview.

Input voltage [V]	Output voltage [V]	Motor [kW]
1 x 200-240	3 x 200-240	1.1 - 7.5
3 x 200-240	3 x 200-240	0.75 - 45
3 x 380-500	3 x 380-500	0.55 - 250
3 x 525-600	3 x 525-600	0.75 - 7.5
3 x 525-690	3 x 525-690	11-250

External communication

The frequency converter can communicate with LonWorks, PROFIBUS, Modbus, BACnet or GSM/GPRS via Grundfos CIU.

20. Motor data

Motors

Motors fitted on TP pumps are totally enclosed, fan-cooled motors with main dimensions to IEC and DIN standards. Electrical tolerances to IEC 34.

Mounting designation

Pump type	Mounting designation - IEC 34-7
TP Series 100	IM 3601 (IM B 14) / IM 3611 (IM V 18)
TP Series 200	
TP Series 300	IM 3001 (IM B 5) / IM 3011 (IM V 1)
Relative humidity:	Maximum 95 %
Enclosure class:	IP55
Insulation class:	F (IEC 85)
Ambient temperature:	Maximum 55 °C, Siemens motors Maximum 60 °C, MG motors Maximum 50 °C, MGE motors Maximum 40 °C, minimum -20 °C, other motors Maximum 45 °C, Siemens motors with integrated CUE Minimum -10 °C, Siemens motors with integrated CUE

If the pump is installed in humid locations, open the lowest drain hole in the motor. This reduces the motor enclosure class to IP44.

High-efficiency motors

TP pumps are fitted with high-efficiency motors.

TP, TPD pumps with three-phase motors from 0.12 to 0.37 kW are fitted with IE2 motors, 0.55 to 55 kW are fitted with IE3 motors, 75 to 200 kW are fitted with IE4 motors and 250 kW and up are fitted with IE3 motors. TP, TPD pumps are also available with IE4 motors from 2.2 to 55 kW.

TPE2, TPE2 D, TPE3, TPE3 D pumps are fitted with Grundfos permanent-magnet MGE motors that have motor efficiency class IE5 according to IEC 60034-30-2.

TPE, TPED pumps with motors up to 22 kW are fitted with Grundfos permanent-magnet MGE motors that have motor efficiency class IE5 according to IEC 60034-30-2.

TPE pumps from 30 to 55 kW are free of choice with motors equivalent to IE3, IE4 or IE5.

Motor range

kW	Mains-operated motors			Electronically speed-controlled motors
	2-pole	4-pole	6-pole

355				
400				
500				
560				
630				

MG and MGE are Grundfos motor brands.

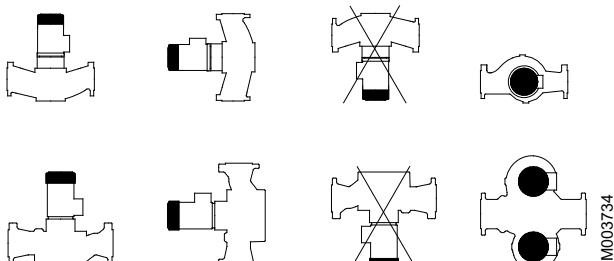

Siemens/Nidec are a sourced high-quality motor brand.

The grey-shaded areas indicate non-available motors.

21. Installation

Mechanical installation

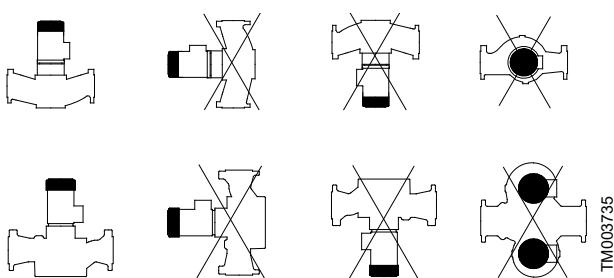

You can install TP pumps with motors smaller than 11 kW in horizontal or vertical pipes.

Installation of motor sizes smaller than 11 kW

You can suspend pumps with motors smaller than 11 kW directly in the pipes, provided the pipes can support the pump. If not, install the pump on a mounting bracket or base plate.

Only install TP pumps with motors of 11 kW and up in horizontal pipes with the motor in vertical position. Always install the pump on an even and rigid foundation.

Installation of motor sizes of 11 kW and up

Note: The motor must never point downwards.

Install the pumps in such a way that strain from the pipes is not transferred to the pump housing.

However, you can suspend some TP, TPE pumps of 11 kW and up directly in the pipes, either horizontally or vertically. See the table below.

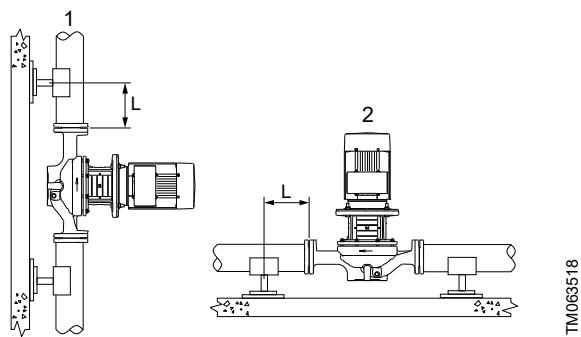

TP, TPE pumps from 11 kW and up suspended in the pipes

Pump type	PN 16	PN 25	P2 [kW]

In installations where the pump is suspended directly in the pipes, the pump can support the pipe length L on both sides of the pump. L is less than 3 x DN. See the figure below. In installations where the pump is suspended directly in the pipes, the pump must be lifted and held in correct position by means of ropes or similar until both pump flanges are completely fastened to the pipe flanges.

Pump suspended directly in the pipes

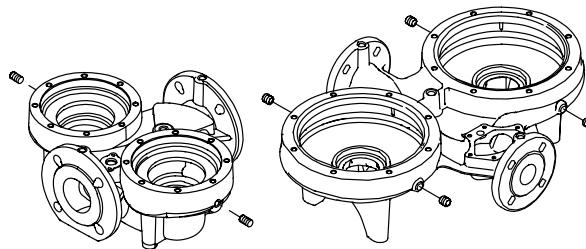

Pos.	Description
1	Vertical pipe
2	Horizontal pipe

When installing a twin-head pump in a horizontal pipe and with horizontal shaft, fit the upper pump housing with an automatic vent.

Twin-head pumps with automatic vent

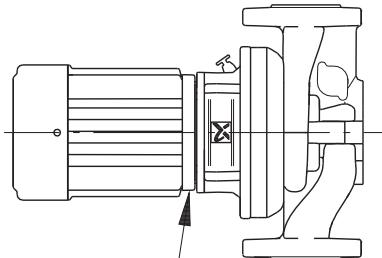

Twin-head pump housings have two Rp 1/4 tappings, TP Series 200, TPE2 D, TPE3 D, or four Rp 1/8 tappings, TP Series 300 for mounting of automatic vents.

Tappings for mounting of automatic vents in TP Series 200, TPE2 D, TPE3 D and TP Series 300

For further information about identification of TP Series 200 and TP Series 300 models, see sections TP Series 100 and 200 pumps and TP Series 300 pumps.

If the liquid temperature falls below the ambient temperature or if the pump is installed outside, condensation may form in the motor during inactivity. In this case, the drain hole in the motor flange must be open and point downwards. See the figure below.

Drain hole

If twin-head pumps are used for pumping liquids with a temperature below 0 °C / 32 °F, condensed water may freeze and cause the coupling to get stuck. You can remedy the problem by installing heating elements. Whenever possible, install pumps with motors smaller than 11 kW with horizontal motor shaft. See figure Twin-head pumps with automatic vent.

Cooling

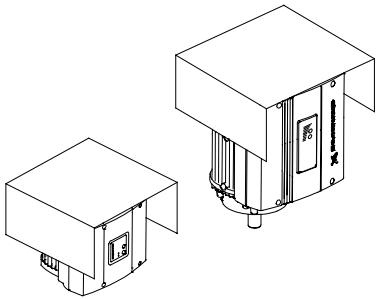

To ensure sufficient cooling of motor and electronics, observe the following:

- Place the pump in such a way that sufficient cooling is ensured.
- Keep the motor cooling fins, holes in fan cover and fan blades clean.
- Make sure that the frequency for the motor is at least 6 Hz, 12 % of maximum speed. The shaft seal may generate noise at speeds below 25 % of maximum speed.

Condensation cover

When installing the pumps outdoors, provide the motor with a suitable cover to protect the pump and motor against the direct effects of the elements. The drain holes in the motor must also be opened to avoid condensation in the motor and terminal box.

When mounting the condensation cover on top of the motor, make sure to leave enough space for the air to cool the motor.

Motors with condensation cover

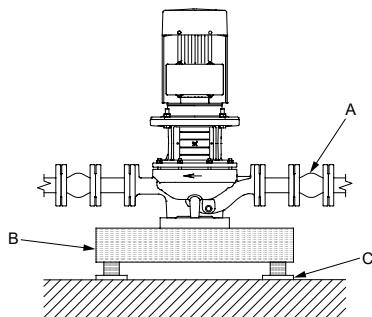

Elimination of noise and vibrations

In order to achieve optimum operation and minimum noise and vibration, consider vibration dampening of the pump. Generally, always consider this for pumps with motors of 11 kW and up, but for motors of 90 kW and up as well as the pump stated in the table below, vibration dampening is mandatory. Smaller motor sizes, however, may also cause undesirable noise and vibration.

Pump type	Frequency [Hz]
TP 200-290/4	50 Hz

Noise and vibration are generated by the revolutions of the motor and pump and by the flow in pipes and fittings. The effect on the environment is subjective and depends on correct installation and the state of the remaining system.

Elimination of noise and vibrations is best achieved by means of a concrete foundation, vibration dampers and expansion joints.

Foundation of TP pump

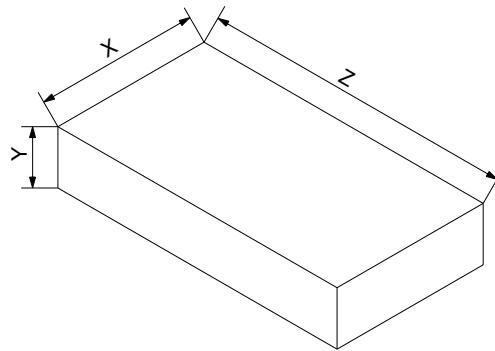

Pos.	Description
A	Expansion joint
B	Concrete foundation
C	Vibration dampers

Concrete foundation

Install the pump on a plane and rigid concrete foundation. This is the optimum solution for vibration dampening. As a rule of thumb, the weight of a concrete foundation must be 1.5 times the pump weight.

Recommended concrete foundations for TP, TPD Series 300 pumps

For TP Series 300 pumps with weights of 150 kg or more, we recommend that you mount the pump on a concrete foundation with the dimensions stated in the table below. The same recommendation applies for TPD Series 300 pumps with weights of 300 kg or more.

TM039190

Foundation for TP, TPD Series 300 pumps

Concrete foundation dimensions			
Pump mass [kg]	Y (height) [mm]	Z (length) [mm]	X (width) [mm]
150	280	565	565
200	310	620	620

Vibration dampers

To prevent the transmission of vibrations to buildings, we recommend that you isolate the pump foundation from building parts by means of vibration dampers.

The selection of the right vibration damper requires the following data:

- Forces transmitted through the damper.
- Motor speed considering speed control, if any.
- Required dampening in %. The suggested value is 70 %.

The right damper varies from installation to installation, and a wrong damper may increase the vibration level. Vibration dampers must therefore be sized by the supplier.

If you install the pump on a foundation with vibration dampers, always fit expansion joints on the pump flanges. This is important to prevent the pump from "hanging" in the flanges.

Expansion joints

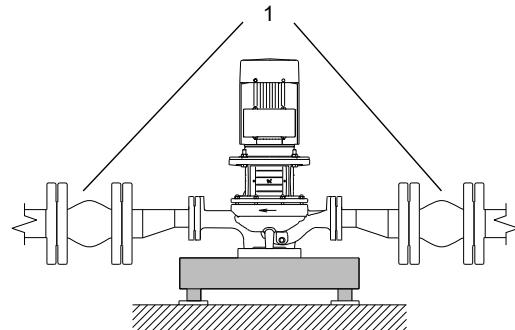

Expansion joints do the following:

- absorb expansions or contractions in the pipes caused by changing liquid temperature.
- reduce mechanical strains in connection with pressure surges in the pipes.
- isolate mechanical structure-borne noise in the pipes. Only rubber bellows expansion joints.

Note: Do not install expansion joints to compensate for inaccuracies in the pipes such as centre displacement of flanges.

Fit expansion joints at a distance of minimum 1 to 1.5 times the nominal flange diameter away from the pump on the inlet as well as on the outlet side. This prevents the

development of turbulence in the expansion joints, resulting in better suction conditions and a minimum pressure loss on the outlet side. At high water velocities, greater than 5 m/s, we recommend that you install larger expansion joints corresponding to the pipes. See the figure below.

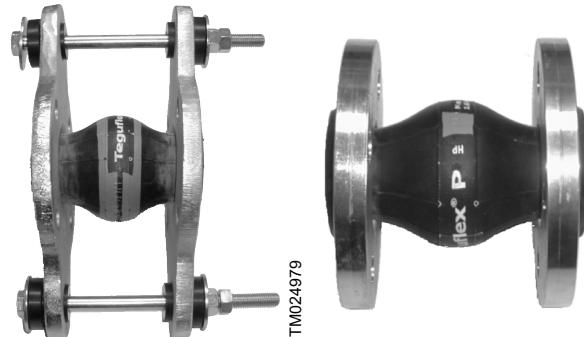

TM049629

TP pump installed with larger expansion joints

Pos.	Description
1	Expansion joints

The illustration below shows examples of rubber bellows expansion joints with or without limit rods.

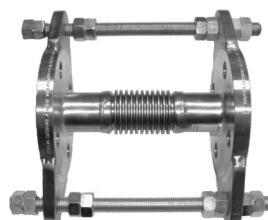

TM024981

Examples of rubber bellows expansion joints

You can use expansion joints with limit rods to reduce the effects of the expansion or contraction forces on the pipes. We always recommend expansion joints with limit rods for flanges larger than DN 100.

Anchors the pipes in such a way that they do not stress the expansion joints and the pump. Follow the supplier's instructions and pass them on to advisers or pipe installers.

The illustration below shows an example of a metal bellows expansion joint with limit rods.

TM024980

Example of metal expansion joint

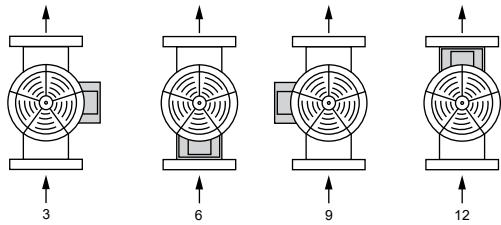

Due to the risk of rupture of the rubber bellows, metal bellows expansion joints may be preferred at temperatures above 100 °C combined with high pressure.

Terminal box positions

TP single-head pumps

As standard, the terminal boxes of TP and TPE, TPE2, TPE3 pumps are mounted in 9 o'clock position.

The possible terminal box positions are shown below.

TM030565

Possible terminal box positions

Pos.	Description
3	3 o'clock
6	6 o'clock
9	9 o'clock
12	Standard
12	12 o'clock

TPE pumps with Siemens motors with integrated CUE can deviate up to 30 degrees from the 9 o'clock position.

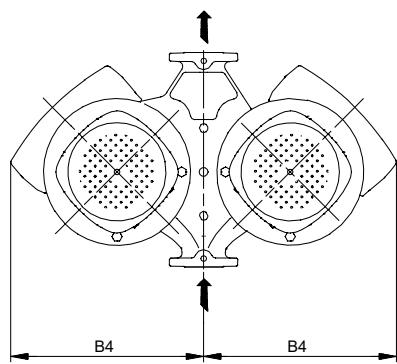

Note: Due to the motor construction, the terminal boxes of some TP pumps with motor sizes above 250 kW are mounted in 10:30 position.

TPD twin-head pumps

As standard, the terminal boxes of all TPD and most TPED pumps are mounted in 12 o'clock position. See figure Possible terminal box positions.

On TPE2 D, TPE3 D pumps, the terminal box is installed in a position different from 12 o'clock.

The TPED pumps with terminal boxes installed in other positions are listed in the table. See example in the figure below.

TM028630

Terminal box positions of TPED pumps

Note: You can find the B4 dimension in the tables of technical data of the individual pump. See section Performance curves and technical data.

Electrical installation

Mains-operated motors

The operating voltage and frequency are marked on the pump nameplate. Make sure that the motor is suitable for the power supply on which it will be used.

Single-phase standard motors incorporate a thermal switch and require no additional motor protection.

Three-phase motors must be connected to a motor starter.

Motors of 3 kW and up incorporate thermistors, PTC. The thermistors are designed according to DIN 44082.

The electrical connection must be carried out as shown in the diagram inside the terminal box cover.

The motors of twin-head pumps are to be connected separately.

Frequency converter operation

Motors types Siemens, MG 71 and MG 80 for supply voltages up to and including 440 V must be protected against voltage peaks higher than 650 V between the supply terminals. See the motor nameplate.

Grundfos motors:

You can connect all three-phase Grundfos motors from frame size 90 and up to a frequency converter.

The connection of a frequency converter often has the effect that the motor insulation system is loaded more and that the motor is more noisy than during normal operation. In addition, large motors are loaded by bearing currents caused by the frequency converter.

In the case of frequency converter operation, consider the following:

In 2-pole motors from 45 kW, 4-pole motors from 37 kW and 6-pole motors from 30 kW, one of the motor bearings must be electrically isolated to prevent damaging currents from passing through the motor bearings.

In the case of noise-critical applications, reduce the motor noise by fitting a dU/dt filter between the motor and the frequency converter. In particularly noise-critical applications, we recommend that you fit a sinusoidal filter.

The length of the cable between the motor and frequency converter affects the motor load. Therefore, check that the cable length meets the specifications laid down by the frequency converter supplier.

For supply voltages between 500 and 690 V, fit either a dU/dt filter to reduce voltage peaks or use a motor with reinforced insulation.

22. Motors for TPE, TPE2 and TPE3 pumps fitted with 2-pole motors from 0.12 - 11 kW and 4-pole motors from 0.12 - 7.5 kW

Single-phase supply voltage

1 x 200-240 V - 10 %/+ 10 %, 50/60 Hz, PE.

Recommended fuse size

Motor size [kW]	Min. [A]	Max. [A]
0.12 - 0.75	6	10
1.1 - 1.5	10	16

You can use standard as well as quick-blow or slow-blow fuses.

Leakage current

Earth leakage current less than 3.5 mA, AC.

Earth leakage current less than 10 mA, DC.

The leakage currents are measured in accordance with EN 61800-5-1:2007.

Three-phase supply voltage

3 x 380-500 V - 10 %/+ 10 %, 50/60 Hz, PE.

Recommended fuse size

Motor size [kW]	Min. [A]	Max. [A]
0.12 - 1.1	6	6
1.5	6	10
2.2	6	16
3	10	16
4	13	16
5.5	16	32
7.5	20	32
11	32	32

You can use standard as well as quick-blow or slow-blow fuses.

Leakage current, AC

Speed [min ⁻¹]	Power [kW]	Mains voltage [V]	Leakage current [mA]
	0.12 - 1.5	≤ 400	< 3.5
		> 400	< 5
1400-2000	2.2 - 4	≤ 400	< 3.5

		> 400	< 3.5
		≤ 400	< 3.5
	7.5 - 11	> 400	< 5

The leakage currents are measured without any load on the shaft and in accordance with EN 61800-5-1:2007.

Inputs and outputs

Earth reference, GND

All voltages refer to GND.

All currents return to GND.

Absolute maximum voltage and current limits

Exceeding the following electrical limits may result in severely reduced operating reliability and motor life:

Relay 1:

Maximum contact load: 250 VAC, 2 A or 30 VDC, 2 A.

Relay 2:

Maximum contact load: 30 VDC, 2 A.

GENI terminals: -5.5 to 9.0 VDC or less than 25 mADC.

Other input or output terminals: -0.5 to 26 VDC or less than 15 mADC.

Digital inputs, DI

Internal pull-up current greater than 10 mA at V_i equal to 0 VDC.

Internal pull-up to 5 VDC (currentless for V_i greater than 5 VDC).

Low logic level: V_i less than 1.5 VDC.

High logic level: V_i greater than 3.0 VDC.

Hysteresis: No.

Screened cable: 0.5 - 1.5 mm², 28-16 AWG.

Maximum cable length: 500 m.

Open-collector digital outputs, OC

Current sinking capability: 75 mADC, no current sourcing.

Load types: Resistive or/and inductive.

Low-state output voltage at 75 mADC: Maximum 1.2 VDC.

Low-state output voltage at 10 mADC: Maximum 0.6 VDC.

Overcurrent protection: Yes.

Screened cable: 0.5 - 1.5 mm², 28-16 AWG.

Maximum cable length: 500 m.

Analog inputs, AI

Voltage signal ranges:

- 0.5 - 3.5 VDC, AL AU.
- 0-5 VDC, AU.
- 0-10 VDC, AU.

Voltage signal: R_i greater than 100 kΩ at 25 °C.

Leak currents may occur at high operating temperatures.

Keep the source impedance low.

Current signal ranges:

- 0-20 mADC, AU.
- 4-20 mADC, AL AU.

Current signal: R_i equal to 292 Ω.

Current overload protection: Yes. Change to voltage signal.

Measurement tolerance: - 0/+ 3 % of full scale (maximum-point coverage).

Screened cable: 0.5 - 1.5 mm², 28-16 AWG.

Maximum cable length: 500 m (excl. potentiometer).

Potentiometer connected to +5 V, GND, any AI:

Use maximum 10 kΩ.

Maximum cable length: 100 m.

Analog output, AO

Current sourcing capability only.

Voltage signal:

- Range: 0-10 VDC.
- Minimum load between AO and GND: 1 kΩ.
- Short-circuit protection: Yes.

Current signal:

- Ranges: 0-20 and 4-20 mADC.
- Maximum load between AO and GND: 500 Ω.
- Open-circuit protection: Yes.

Tolerance: - 0/+ 4 % of full scale (maximum-point coverage).

Screened cable: 0.5 - 1.5 mm², 28-16 AWG.

Maximum cable length: 500 m.

Pt100/1000 inputs, PT

Temperature range:

- Minimum -30 °C. 88 Ω / 882 Ω.
- Maximum 180 °C. 168 Ω / 1685 Ω.

Measurement tolerance: ± 1.5 °C.

Measurement resolution: < 0.3 °C.

Automatic range detection, Pt100 or Pt1000: Yes.

Sensor fault alarm: Yes.

Screened cable: 0.5 - 1.5 mm², 28-16 AWG.

Use Pt100 for short wires.

Use Pt1000 for long wires.

LiqTec sensor inputs*

Use Grundfos LiqTec sensor only.

Screened cable: 0.5 - 1.5 mm², 28-16 AWG.

Grundfos Digital Sensor input and output, GDS *

Use Grundfos Digital Sensor only.

* Only applicable for TPE, TPED Series 2000 and TPE3, TPE3 D pumps.

Power supplies**+5 V:**

- Output voltage: 5 VDC - 5 %/+ 5 %.
- Maximum current: 50 mADC, sourcing only.
- Overload protection: Yes.

+24 V:

- Output voltage: 24 VDC - 5 %/+ 5 %.
- Maximum current: 60 mADC, sourcing only.
- Overload protection: Yes.

Digital outputs, relays

Potential-free changeover contacts.

Minimum contact load when in use: 5 VDC, 10 mA.

Screened cable: 0.5 - 2.5 mm², 28-12 AWG.

Maximum cable length: 500 m.

Bus input

Grundfos GENIbus protocol, RS-485.

Screened 3-core cable: 0.5 - 1.5 mm², 28-16 AWG.

Maximum cable length: 500 m.

EMC, electromagnetic compatibility

Standard used: EN 61800-3.

The table below shows the emission category of the motor.

C1 fulfils the requirements for residential areas.

Note: When connected to a public network, 11 kW motors do not comply with the partial weighted harmonic distortion (PWHD) requirements of EN 61000-3-12. If required by the distribution network operator, compliance can be obtained in the following way:

The impedance of the mains cables between the motor and the point of common coupling (PCC) must be equivalent to the impedance of a 50 m cable with a cross-section of 0.5 mm.

C3 fulfils the requirements for industrial areas.

Note: When the motors are installed in residential areas, supplementary measures may be required as the motors may cause radio interference.

Motor [kW]	Emission category	
	1450-2000 min ⁻¹	2900-4000 min ⁻¹
	4000-5900 min ⁻¹	
0.12	C1	C1
0.25	C1	C1
0.37	C1	C1
0.55	C1	C1
0.75	C1	C1
1.1	C1	C1
1.5	C1	C1
2.2	C1	C1
3	C1	C1
4	C1	C1
5.5	C3/C1 ³¹⁾	C1
7.5	C3/C1 ³¹⁾	C3/C1 ³¹⁾
11	-	C3/C1 ³¹⁾

³¹⁾ C1, if equipped with an external Grundfos EMC filter.

Immunity: The motor fulfils the requirements for industrial areas.

Contact Grundfos for further information.

Enclosure class

Standard: IP55 (IEC 34-5).

Optional: IP66 (IEC 34-5).

Insulation class

F (IEC 85).

Ambient temperature

During operation: -20 to 50 °C.

During storage and transportation: -30 to 60 °C.

Standby power consumption

5-10 W.

Cable entries

Motor [kW]	Number and size of cable entries		
	TPE, TPED Series 1000 and 2000		TPE2, TPE2 D, TPE3, TPE3 D

Motor protection

The motor requires no external motor protection. The motor incorporates thermal protection against slow overloading and blocking.

Additional protection

The residual-current circuit breaker must be marked with the following symbol:

The total leakage current of all the electrical equipment in the installation must be taken into account. You find the leakage current of the motor in sections **Leakage current** and **Leakage current, AC**.

This product can cause a direct current in the protective-earth conductor.

Overvoltage and undervoltage protection

Overvoltage and undervoltage may occur in case of unstable power supply or a faulty installation. The motor is stopped if the voltage falls outside the permissible voltage range. The motor restarts automatically when the voltage is again within the permissible voltage range. Therefore, no additional protection relay is required.

Note: The motor is protected against transients from the power supply according to EN 61800-3. In areas with high lightning intensity, we recommend external lightning protection.

Overload protection

If the upper load limit is exceeded, the motor automatically compensates for this by reducing the speed and stops if the overload condition persists.

The motor remains stopped for a set period. After this period, the motor automatically attempts to restart. The overload protection prevents damage to the motor. Consequently, no additional motor protection is required.

Overtemperature protection

The electronic unit has a built-in temperature sensor as an additional protection. When the temperature rises above a certain level, the motor automatically compensates for this by reducing the speed and stops if the temperature keeps rising. The motor remains stopped for a set period. After this period, the motor automatically attempts to restart.

Protection against phase unbalance

Three-phase motors must be connected to a power supply with a quality corresponding to IEC 60146-1-1, class C, to ensure correct motor operation at phase unbalance. This also ensures long life of the components.

Related information

[Leakage current](#)

[Leakage current, AC](#)

Maximum number of starts and stops

The number of starts and stops via the power supply must not exceed four times per hour.

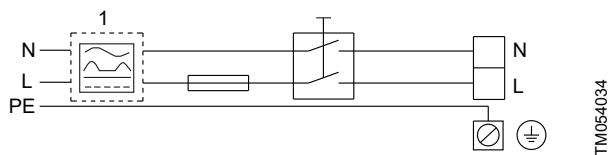

When switched on via the power supply, the pump starts after approximately 5 seconds.

If you want a higher number of starts and stops, use the input for external start-stop when starting or stopping the pump.

When you start a pump via an external on/off switch, the pump starts immediately.

Wiring diagrams

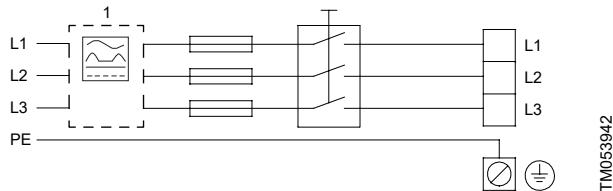

Single-phase supply:

Example of a mains-connected motor with main switch, backup fuse and additional protection

Pos.	Description
1	RCD, type B

Three-phase supply:

Example of a mains-connected motor with main switch, backup fuse and additional protection

Pos.	Description
1	RCD, type B

Connection terminals

The descriptions and terminal overviews in this section apply to both single-phase and three-phase motors.

Connection terminals, advanced functional module, FM 300

The advanced module has these connections:

- three analog inputs
- one analog output
- two dedicated digital inputs
- two configurable digital inputs or open-collector outputs
- Input and output for Grundfos Digital Sensor
Not applicable for TPE, TPED Series 1000 and TPE2, TPE2 D pumps. The factory-fitted differential-pressure sensor for TPE, TPED Series 2000 and TPE3, TPE3 D pumps is connected to this input.
- two Pt100/1000 inputs
- two LiqTec sensor inputs
- two signal relay outputs
- GENIbus connection.

See figure Connection terminals, FM 300.

Note: Digital input 1 is factory-set to be start-stop input where open circuit results in stop.

A jumper has been factory-fitted between terminals 2 and 6. Remove the jumper if digital input 1 is to be used as external start-stop or any other external function.

Inputs and outputs

All inputs and outputs are internally separated from the mains-conducting parts by reinforced insulation and galvanically separated from other circuits. All control terminals are supplied by protective extra-low voltage, PELV, thus ensuring protection against electric shock.

Signal relay outputs

- Signal relay 1:

LIVE:

You can connect supply voltages up to 250 VAC.

PELV:

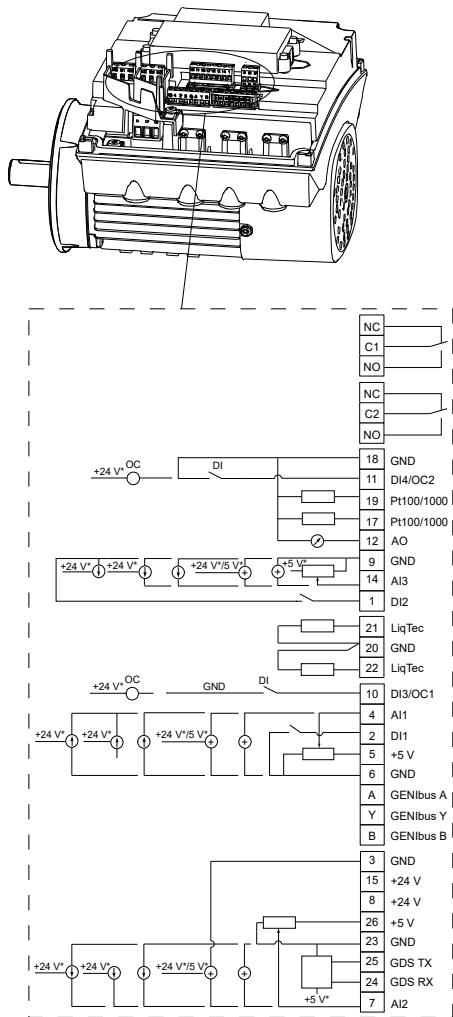

The output is galvanically separated from other circuits. Therefore, you can connect the supply voltage or protective extra-low voltage to the output as desired.

- Signal relay 2:

PELV:

The output is galvanically separated from other circuits. Therefore, you can connect the supply voltage or protective extra-low voltage to the output as desired.

Mains supply, terminals N, PE, L or L1, L2, L3, PE.

* If an external supply source is used, there must be a connection to GND.

Connection terminals, FM 300, option

TM053509

Terminal	Type	Function
NC	Normally closed contact	
C1	Common	Signal relay 1 LIVE or PELV
NO	Normally open contact	
NC	Normally closed contact	Signal relay 2
C2	Common	PELV only
NO	Normally open contact	
18	GND	Earth
11	DI4/OC2	Digital input/output, configurable. Open collector: Maximum 24 V resistive or inductive.

23. Motors for TPE pumps fitted with 2-pole motors from 15-22 kW and 4-pole motors from 11-22 kW

Supply voltage

- 3 × 380-500 V -10 % / +10 %, 50/60 Hz, PE
- 3 × 380-480 V -10 % / +10 %, 50/60 Hz, PE
- 3 × 200-240 V -10 % / +10 %, 50/60 Hz, PE

Check that the supply voltage and frequency correspond to the values stated on the nameplate.

Recommended size of fuse

You can use standard as well as quick-blow or slow-blow fuses.

3 × 380-480 V

Motor size [kW]	Recommended [A]	Maximum [A]	Fuse type
11	35	80	gG
15	50	80	gG
18.5	60	80	gG
22	70	80	gG

Leakage current (AC)

The leakage currents are measured without any load on the shaft and in accordance with EN 61800-5-1:2007.

3 × 380-480 V, 50/60 Hz

Speed [rpm]	Power [kW]	Mains voltage [V]	Leakage current (I_L) [mA]
1450-2200	11-22	≤ 400	3.5 < I_L < 20
		> 400	3.5 < I_L < 30
2900-4000	15-22	≤ 400	3.5 < I_L < 20
		> 400	3.5 < I_L < 30

Inputs and outputs

Signal reference

All voltages refer to signal ground (GND). All currents return to signal ground.

Absolute maximum voltage and current limits

Exceeding the following electrical limits may result in severely reduced operating reliability and motor life.

Relay 1:

- Maximum contact load: 250 VAC, 2 A or 30 VDC, 2 A.

Relay 2:

- Maximum contact load: 30 VDC, 2 A.

GENI terminals: -5.5 to +9.0 VDC or less than 25 mADC.
Other input and output terminals: -0.5 to +26 VDC or less than 15 mADC.

Digital inputs

Internal pull-up current greater than 10 mA at V_i equal to 0 VDC.

Internal pull-up to 5 VDC. Currentless for V_i greater than 5 VDC.

Input activated level: V_i less than 1.5 VDC.

Input deactivated level: V_i from 3.0 VDC to 24 VDC.

Hysteresis: No.

Screened cable: 0.5 - 1.5 mm² / 28-16 AWG.

Maximum cable length: 500 m.

Maximum cable length: 1640 ft (500 m).

Safe Torque Off (STO) terminals

S24:

24 V output voltage. Only for use with ST1 and ST2 inputs.

- Output voltage: 24 V -5 % to +5 %
- Maximum current: 50 mADC
- Overload protection: Yes.

ST1 and ST2:

- STO activated: V_{in} lower than 1.25 V
- STO deactivated: V_{in} greater than 21.6 V and lower than 25 V
- Input current greater than 10 mA at V_{in} equal to 24 V.

When the internal voltage source (connection S24) is used, the input voltage for ST1 and ST2 is within accepted limits.

When an external voltage source is used to drive the STO inputs, the following conditions must be met:

In operational state, the input voltage of ST1 and ST2 with reference to GND must be within:

- V_{min} : 21.6 V
- V_{max} : 25.0 V.

In the safe state, the input voltage of ST1 and ST2 with reference to GND must be as follows:

- V_{max} : 1.25 V.

In the operating state, the current flow into ST1 and ST2 must be within:

- Minimum contact current: 10 mA
- Maximum contact current: 25 mA.

Input source rating: SELV

Bus input (Ethernet)

Protocols TC/IP GENI, GDP.

Cable type, Standard CAT5, CAT5e or CAT6.

Open-collector digital outputs (OC)

Current-sinking capability: 75 mADC, no current sourcing.

Load types: Resistive and/or inductive.

Low-state output voltage at 75 mADC: Maximum 1.2 VDC.

Low-state output voltage at 10 mADC: Maximum 0.6 VDC.

Overcurrent protection: Yes.

Screened cable: 0.5 - 1.5 mm² / 28-16 AWG.

Maximum cable length: 500 m.

Maximum cable length: 1640 ft (500 m).

Analog inputs (AI)

Voltage signal ranges:

- 0.5 - 3.5 VDC, AL AU
- 0-5 VDC, AU
- 0-10 VDC, AU.

Voltage signal:

- R_i greater than 100 k Ω at 25 °C.
- R_i greater than 100 k Ω at 77 °F (25 °C).

Leak currents may occur at high operating temperatures.

Keep the source impedance low.

Current signal ranges:

- 0-20 mADC, AU
- 4-20 mADC, AL AU.

Current signal: R_i is equal to 292 Ω .

Current overload protection: Yes. Change to voltage signal.

Measurement tolerance: +/- 2 % of full scale.

Screened cable: 0.5 - 1.5 mm² / 28-16 AWG.

Maximum cable length: 500 m, excluding potentiometer.

Maximum cable length: 1640 ft (500 m), excluding potentiometer.

Potentiometer connected to +5 V, GND, any AI: Use maximum 10 k Ω .

Maximum cable length: 100 m.

Maximum cable length: 328 ft (100 m).

Analog output (AO)

Current sourcing capability only.

Voltage signal:

- Range: 0-10 VDC
- Minimum load between AO and GND: 1 k Ω
- Short-circuit protection: Yes.

Current signal:

- Ranges: 0-20 and 4-20 mADC
- Maximum load between AO and GND: 500 Ω
- Open-circuit protection: Yes.

Tolerance: +/- 4 % of full scale.

Screened cable: 0.5 - 1.5 mm² / 28-16 AWG.

Maximum cable length: 500 m.

Maximum cable length: 1640 ft (500 m).

Pt100 or Pt1000 inputs (Pt)

Temperature range:

- Minimum -50 °C (80 Ω /803 Ω).Minimum -58 °F (-50 °C) (80 Ω /803 Ω).
- Maximum 204 °C (177 Ω /1773 Ω).Maximum 399 °F (204 °C) (177 Ω /1773 Ω).

Measurement tolerance: +/- 1.5 °C.

Measurement tolerance: +/- 2.7 °F (1.5 °C).

Measurement resolution: less than 0.3 °C.

Measurement resolution: less than 0.54 °F (0.3 °C).

Automatic range detection (Pt100 or Pt1000): Yes.

Sensor fault alarm: Yes.

Screened cable: 0.5 - 1.5 mm² / 28-16 AWG.

Use Pt100 for short wires.

Use Pt1000 for long wires.

LiqTec sensor inputs

Use a Grundfos LiqTec sensor only.

Screened cable: 0.5 - 1.5 mm² / 28-16 AWG.

Grundfos Digital Sensor input and output (GDS)

Use Grundfos Digital Sensor only.

Power supplies, +5 V, +24 V

+5 V

- Output voltage: 5 VDC -5 % to +5 %
- Maximum current: 60 mADC, sourcing only
- Overload protection: Yes.

+24 V

- Output voltage: 24 VDC -5 % to +5 %
- Maximum current: 200 mADC, sourcing only
- Overload protection: Yes.

Digital outputs, relays

Potential-free changeover contacts.

Minimum contact load when in use: 5 VDC, 10 mA.

Screened cable: 0.5 - 2.5 mm² / 28-12 AWG.

Maximum cable length: 500 m.

Maximum cable length: 1640 ft (500 m).

Bus input

Grundfos GENibus protocol, RS-485.

Grundfos Modbus protocol, RS-485.

Screened 3-core cable: 0.5 - 1.5 mm² / 28-16 AWG.

Maximum cable length: 500 m.

Maximum cable length: 1640 ft (500 m).

Other technical data

Ecodesign Directive

This product is out of scope of Directive 2009/125/EC and Commission Regulation (EU) 2019/1781 due to Article 2 (3a), as the variable speed drive (VSD) is integrated into a product and its energy performance cannot be tested independently from the product.

EMC (electromagnetic compatibility)

Standard used: EN 61800-3.

The table below shows the emission category of the motor.

C1 fulfils the requirements for residential areas.

 This equipment complies with IEC 61000-3-12 provided that the short-circuit power S_{sc} is greater than or equal to the respective value described in the table below at the interface point between the user's supply and the public system. It is the responsibility of the installer or user of the equipment to ensure, by consultation with the distribution network operator if necessary, that the equipment is connected only to a supply with a short-circuit power S_{sc} greater than or equal to the respective value described in the table below.

3 × 380-480 V, 50/60 Hz

Speed [rpm]	Power P2 [kW]	Supply voltage [V]	Short-circuit power [mVA]
1450-2200	11	3 × 380-480	3.5
	15	3 × 380-480	4.6
	18.5	3 × 380-480	5.6
	22	3 × 380-480	6.6
2900-4000	15	3 × 380-480	4.6
	18.5	3 × 380-480	5.8
	22	3 × 380-480	6.6

C2 fulfils the requirements for residential areas if the system is operated and installed by qualified persons.

In a residential environment, this product may cause radio interference in which case supplementary mitigation measures may be required.

Motor [kW]	Emission category	
	1450-2200 rpm	2900-4000 rpm
11	C2	-
15	C2	C2
18.5	C2	C2
22	C2	C2

Immunity: The motor fulfils the requirements for industrial areas.

Contact Grundfos for further information.

Enclosure class

Standard: IP55.

Optional: IP66.

Insulation class

311 °F (155 °C).

Standby power consumption

5-10 W.

Cable entry sizes

Number and size of cable entries

Motor [kW]	1450-2200 rpm	2900-4000 rpm	4000-5900 rpm
11	1 × M40 + 6 × M20	-	-
15 - 22	1 × M40 + 6 × M20	1 × M40 + 6 × M20	1 × M40 + 6 × M20

Torques

Torques for terminals

Terminal	Recommended torque [Nm]
L1, L2, L3	2.2
PE	6
NC, C1, C2, NO	0.5
DI1, DI2, DI3, DI4, AI1, AI2, AI3, AO1, PT1, PT2, LT1, LT2, GND, 24V, 5V, TX, RX, A, Y, B, S24, ST1, ST2	0.5

Terminal	Recommended torque [ft-lb]
L1, L2, L3	1.6
PE	4.4
NC, C1, C2, NO	0.4
DI1, DI2, DI3, DI4, AI1, AI2, AI3, AO1, PT1, PT2, LT1, LT2, GND, 24V, 5V, TX, RX, A, Y, B, S24, ST1, ST2	0.4

Torques for other parts

Part designation	Recommended torque [Nm]
Control box, upper part	6.5 - 7
Cover for mains	1.0 - 1.3
Cable glands:	
M20/M40	1 - 1.5

Part designation	Recommended torque [ft-lb]
Control box, upper part	4.8 - 5.2
Cover for power supply	0.7 - 1

Electrical supply systems

Power supply network and earthing systems

- If you want to supply the product through an IT network, make sure that you have a suitable product variant. If you are in doubt, contact Grundfos.
- The internal EMC filter remains connected, and subsequently no reduced leakage current variant is available.

Supply line types

System voltage: 300 V.

- TN-S earthing system
- TN-C earthing system
- TN-C-S earthing system
- TT earthing system

Protection against mains voltage transients

The product is protected against mains voltage transients in accordance with EN 61800-3.

Motor protection

The product incorporates thermal protection against slow overloading and blocking. No external motor protection is required.

The product includes load and speed sensitive motor overload protection with thermal memory retention.

Connecting an external switch

We recommend that you connect the product to an external switch.

1. Connect the switch via terminals 2 (DI1) and 6 (GND). A jumper is added from factory.
2. Enable the **External stop** function. Default setting from factory.

Cable requirements

Cable cross-section

Recommended cable type: H07RN-F.

Cable cross-section data for MGE motors

3 × 380-480 V, 50/60 Hz

Speed [rpm]	Power P2 [kW]	Supply voltage [V]	Nominal current [A]	Cable cross- section [mm ²]
1450-2200	11	3 × 380-480	20.2 - 16.4	6
	15	3 × 380-480	26.7 - 21.8	6
	18.5	3 × 380-480	33.2 - 26.9	10
	22	3 × 380-480	39.2 - 31.5	10
2900-4000	15	3 × 380-480	26.7 - 22	6
	18.5	3 × 380-480	33 - 27.8	10
	22	3 × 380-480	39.2 - 31.7	10

Conductors

Conductor types

Use stranded copper conductors only.

Conductor temperature ratings

Use 75 °C copper conductors only.

Conduit hubs

Conduit hubs must be UL listed according to UL Category Code Number (CCN) DWTT/DWTT7 and be suitable for the relevant enclosure type rating in accordance with UL 514B and CSA C22.2 No. 18.3.

For type 2 enclosures it is also allowed to use type 2, 3, 3R, 4, 4X, 5, 6, 6P, 12 and 13 conduit hubs.

For type 12 enclosures it is also allowed to use type 12 and 13 conduit hubs.

The relevant type rating can be found on the nameplate of the product.

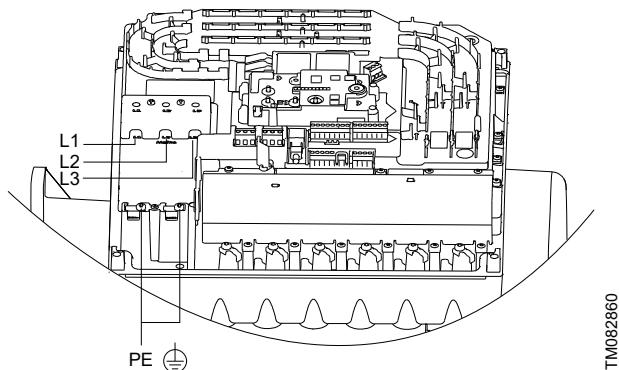

Three-phase connections

The cables in the terminal box must be as short as possible. However, the separated protective-earth conductor must be so long that it is the last one to be disconnected in case the cable is inadvertently pulled out of the cable entry.

To avoid loose connections, ring terminals must be used. Ensure that ring terminals are short enough to stay within the terminal cover.

Check that the supply voltage and frequency correspond to the values stated on the nameplate.

Mains connection on a three-phase product

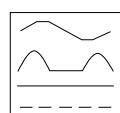

TM002860

Pos.	Description
L1	Phase 1
L2	Phase 2
L3	Phase 3
PE	Protective earth

Additional protection

Residual-current circuit breakers

The residual-current circuit breaker must be marked.

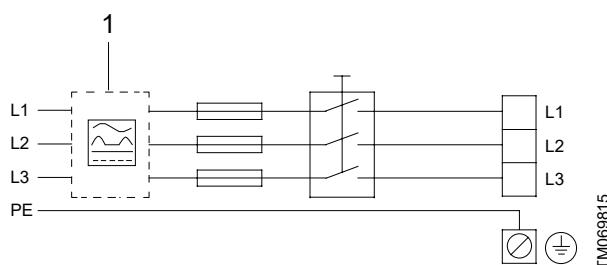

TM066230

Take into account the total leakage current of all the electrical equipment in the installation.

This product may cause a direct current in the protective-earth conductor.

Connection example for three-phase supply

The figure shows an example of a mains-connected three-phase motor with a main switch, a backup fuse and a residual-current circuit breaker, type B.

TM069815

Pos.	Description
1	Residual-current circuit breaker, type B
L1	Phase 1
L2	Phase 2
L3	Phase 3
PE	Protective earth

Overvoltage and undervoltage protection

Overvoltage and undervoltage may occur in case of unstable power supply or a faulty installation. The product stops if the voltage falls outside the permissible voltage range. The product restarts automatically when the voltage is within the permissible voltage range. The product requires no additional protection relay.

The product is protected against transients from the power supply according to EN 61800-3. In areas with high lightning intensity, we recommend external lightning protection.

Overvoltage category:

The product is approved for Overvoltage category III rating.

Overload protection

The motor-current protection settings are fixed for each motor variants. The settings ensure that the motor is protected against overtemperature in all operating states with regard to supply voltage and shaft load, including a blocked shaft.

The motors are current controlled and will respond by reducing the speed if the shaft load increases more than 10 % of the nominal load.

If the shaft load forces the speed down to minimum speed, the motor shuts down.

A sudden increase in the motor current caused by a fault where the peak of the motor current is increased 60 % above nominal will cause the motor to shut down within 0.5 ms.

The product requires no additional protection.

Overtentperature protection

The motor is thermally protected by a temperature measurement in the drive. It can handle the lack of airflow over the motor in case the fan cover is blocked. It also means that the protection has a built-in memory retention. The time from start to shutdown due to overtemperature is therefore always longer when starting at a motor temperature close to the ambient temperature compared with restarting after a shutdown due to overtemperature.

Protection against phase unbalance

Phase unbalance on the power supply must be minimised. The three-phase motor must be connected to a power supply with a quality corresponding to IEC 60146-1-1, class C. This also ensures long life of the components.

Short-circuit current

The product's electronic power output short-circuit protection circuitry meets the requirements of IEC 60364-4-41:2005/AMD1:–, Clause 411.

Suitable for use on a circuit capable of delivering not more than 5000 rms symmetrical amperes, 480 V maximum when protected by J or T Class fuses, rated 80 A, 600 V.

Functional modules

The functional modules are different types of add-on boards containing various types of input and output terminals for the user to connect different types of sensors, for example switches and relays.

The product can only contain one functional module at the time.

The following functional modules are available:

- FM310 (standard)
- FM311 (option)³²⁾

³²⁾Without Bluetooth (BLE).

The selection of module depends on the application and the required number of inputs and outputs.

Functional module, FM310 and FM311 from 15 kW 2-pole and 11 kW 4-pole

Inputs and outputs

The FM311 functional module does not include Bluetooth connection.

The module has these connections:

- three analog inputs
- one analog output
- two dedicated digital inputs
- two configurable digital inputs or open-collector outputs
- Input and output for Grundfos Digital Sensor Not applicable for TPE, TPED pumps. The factory-fitted differential-pressure sensor for TPE, TPED Series 2000 is connected to this input.
- Grundfos Digital Sensor input and output
- two Pt100/1000 inputs
- two LiqTec sensor inputs
- two signal relay outputs
- GENIbus/Modbus connection
- two Safe Torque Off (STO) inputs
- Ethernet connection
- Bluetooth (BLE) connection.³³⁾

³³⁾FM311 is without Bluetooth.

Signal relay 1

LIVE: You can connect supply voltages up to 250 VAC to the output.

SELV: The output is galvanically separated from other circuits. Therefore, you can connect the supply voltage or safety extra-low voltage to the output as desired.

Signal relay 2

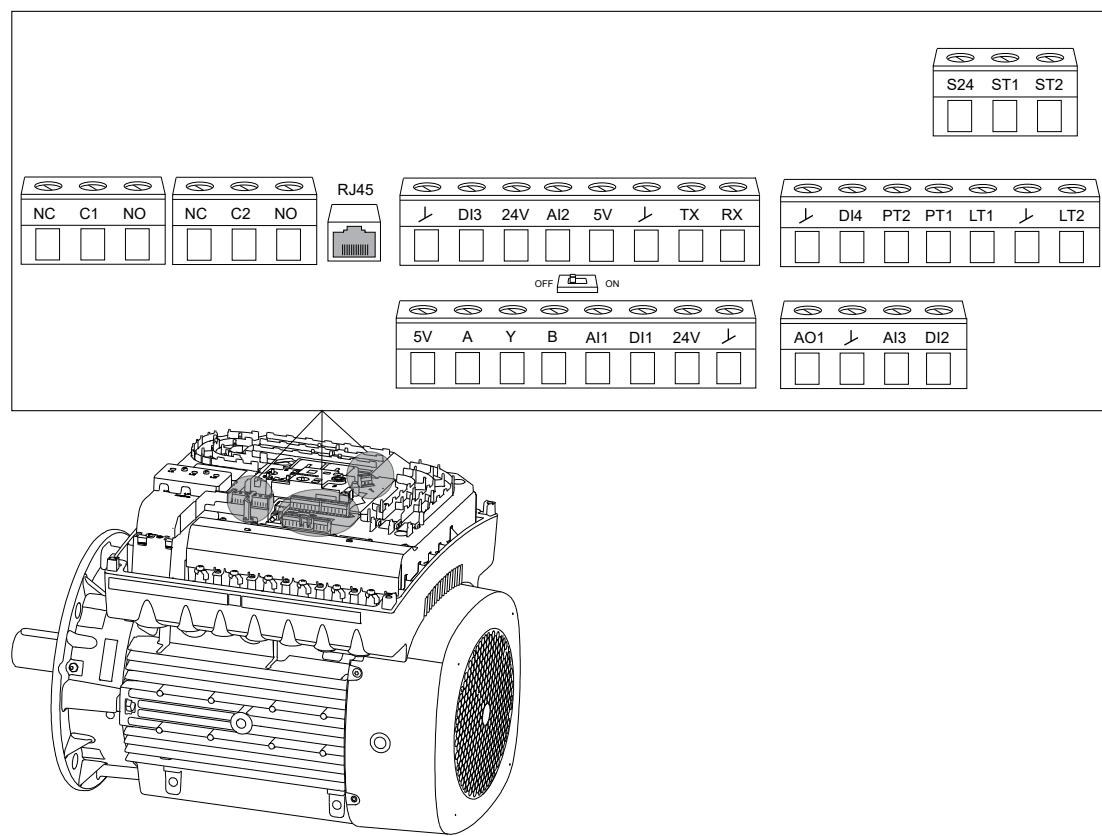

SELV: The output is galvanically separated from other circuits. Therefore, you can connect the supply voltage or safety extra-low voltage to the output as desired.

Connection terminals for inputs and outputs

The inputs and outputs are internally separated from the mains-conducting parts by reinforced insulation and galvanically separated from other circuits. All control terminals are supplied with safety extra-low voltage (SELV), ensuring protection against electric shock.

Cables for the relays and the Ethernet cable must be rated at least 250 V/2 A.

The relays are approved for overvoltage category II, whether power is supplied from a transformer or the power supply.

Terminal	Type	Function
NC	Normally closed contact	
C1	Common	Signal relay 1: LIVE or SELV
NO	Normally open contact	
NC	Normally closed contact	
C2	Common	Signal relay 2: SELV only
NO	Normally open contact	
RJ45	Ethernet	Ethernet communication
GND	GND	Signal ground
DI3	DI3/OC1	Digital input/output, configurable Open collector: Maximum 24 V resistive or inductive
24V	+24 V	Power supply
AI2	AI2	Analog input: • 0-20 mA or 4-20 mA • 0.5 - 3.5 V, 0-5 V or 0-10 V.
5V	+5 V	Power supply to a potentiometer or sensor
GND	GND	Signal ground
TX	GDS TX	Grundfos Digital Sensor output
RX	GDS RX	Grundfos Digital Sensor input
GND	GND	Signal ground
DI4	DI4/OC2	Digital input/output, configurable Open collector: Maximum 24 V resistive or inductive
PT2	Pt100/1000 input 2	Pt100/1000 sensor input 2

Terminal	Type	Function
PT1	Pt100/1000 input 1	Pt100/1000 sensor input 1
LT1	LiqTec sensor input 1	LiqTec sensor input 1 White conductor
GND	GND	Signal ground Brown and black conductors
LT2	LiqTec sensor input 2	LiqTec sensor input 2 Blue conductor
5V	+5 V	Power supply to a potentiometer or sensor
A	GENIbus, A	GENIbus, A (+) / Modbus, D1 (+)
Y	GENIbus, Y	GENIbus, GND / Modbus, GND
B	GENIbus, B	GENIbus, B (-) / Modbus, D0 (-)
AI1	AI1	Analog input: • 0-20 mA or 4-20 mA • 0.5 - 3.5 V, 0-5 V or 0-10 V.
DI1	DI1	Digital input, configurable  Digital input 1 is factory-set to be start or stop input where an open circuit results in stop. A jumper has been factory-fitted between terminals DI1 and GND. Remove the jumper if digital input 1 is to be used as external start or stop or any other external function.
24V	+24 V	Power supply
GND	GND	Signal ground
AO1	AO	Analog output: • 0-20 mA or 4-20 mA • 0-10 V.
GND	GND	Signal ground
AI3	AI3	Analog input: • 0-20 mA or 4-20 mA • 0.5 - 3.5 V, 0-5 V or 0-10 V.
DI2	DI2	Digital input, configurable
S24	+24 V (STO)	Power supply to the Safe Torque Off inputs
ST1	STO1	Safe Torque Off - Input 1
ST2	STO2	Safe Torque Off - Input 2

24. Siemens/Nidec motors with integrated CUE frequency converters 30-55 kW

TPE pumps 30-55 kW have Siemens/Nidec motors with integrated CUE frequency converters. The frequency converter part of the TPE Series 2000 and TPE Series 1000 will in the following descriptions be named as CUE.

Technical data

Enclosure

See nameplate and install according to enclosure type.

Typical shaft power P2		Enclosure (3 x 380-500 V, IP55)
[kW]	[hp]	
30	40	B2
37	50	
45	60	C1
55	75	

Operating conditions

Relative humidity	5-95 % RH
Ambient temperature	Max. 50 °C (122 °F)
Average ambient temperature over 24 hours	Max. 45 °C (113 °F)
Minimum ambient temperature	-10 °C (14 °F)
Temperature during storage and transport	-25 to 65 °C (-13 to 149 °F)
Storage duration	Max. 6 months
Maximum altitude above sea level without performance reduction	1000 m (3280 ft)
Maximum altitude above sea level with performance reduction	3000 m (9840 ft)

TPE comes in a packaging which is not suitable for outdoor storage.

Mechanical data

Cable gland

Enclosure	Standard gland holes
	1 x 21.5
B2 IP21 / NEMA type 1 and B2 IP55 / NEMA type 12	1 x 26.3
	1 x 33.1
	2 x 42.9

Cable requirements

Maximum length, screened motor cable	150 m (500 ft)
Maximum length, unshielded motor cable	300 m (1000 ft)
Maximum length, signal cable	300 m (1000 ft)

Always comply with local regulations as to cable cross-sections.

Cable cross-section to signal terminals

Maximum cable cross-section to signal terminals, rigid conductor	1.5 mm ² (14 AWG)
Maximum cable cross-section to signal terminals, flexible conductor	1.0 mm ² (18 AWG)
Minimum cable cross-section to signal terminals	0.5 mm ² (20 AWG)

Non-UL fuses and conductor cross-section to mains and motor, for installations outside North America

Typical shaft power P2 [kW (hp)]	Maximum fuse size [A]	Maximum conductor cross-section ³⁴⁾ [mm ²]	
		3 x 380-500 V	
30 (40)	80	gG	35
37 (50)	100	gG	50
45 (60)	125	gG	50
55 (75)	160	gG	50

³⁴⁾ Screened motor cable, unshielded supply cable. AWG. See section Electrical data.

Electrical data

Mains supply (L1, L2, L3)

Supply voltage	380-500 V ± 10 %
Supply frequency	50/60 Hz
Maximum temporary imbalance between phases	3 % of rated value
Leakage current to protective earth	> 3.5 mA
Number of cut-ins, enclosures B and C	Max. 1 time/min.

Do not use the power supply for switching CUE on and off.

RS-485 GENibus connection

Terminal number	68 (A), 69 (B), 61 GND (Y)
-----------------	----------------------------

The RS-485 circuit is functionally separated from other central circuits and galvanically separated from the supply voltage (PELV).

Digital inputs

Terminal number	18, 19, 32, 33
Voltage level	0-24 VDC
Voltage level, open contact	> 19 VDC
Voltage level, closed contact	< 14 VDC
Maximum voltage on input	28 VDC
Input resistance, R _i	Approx. 4 kΩ

All digital inputs are galvanically separated from the supply voltage (PELV) and other high-voltage terminals.

Signal relays

Relay 01, terminal number	1 (C), 2 (NO), 3 (NC)
Relay 02, terminal number	4 (C), 5 (NO), 6 (NC)
Maximum terminal load (AC-1) ³⁵⁾	240 VAC, 2 A
Maximum terminal load (AC-15) ³⁵⁾	240 VAC, 0.2 A
Maximum terminal load (DC-1) ³⁵⁾	50 VDC, 1 A
Minimum terminal load	24 VDC 10 mA 24 VAC 20 mA

³⁵⁾ IEC 60947, parts 4 and 5.

C	Common
NO	Normally open
NC	Normally closed

The relay contacts are galvanically separated from other circuits by reinforced insulation (PELV).

Analog inputs

Analog input 1, terminal number	53
Voltage signal	A53 = "U" ³⁶⁾
Voltage range	0-10 V
Input resistance, R _i	Approx. 10 kΩ
Maximum voltage	± 20 V
Current signal	A53 = "I" ³⁶⁾
Current range	0-20, 4-20 mA
Input resistance, R _i	Approx. 200 Ω
Maximum current	30 mA
Maximum fault, terminals 53, 54	0.5 % of full scale
Analog input 2, terminal number	54
Current signal	A54 = "I" ³⁶⁾
Current range	0-20, 4-20 mA
Input resistance, R _i	Approx. 200 Ω
Maximum current	30 mA
Maximum fault, terminals 53, 54	0.5 % of full scale

³⁶⁾ The factory setting is voltage signal "U".

All analog inputs are galvanically separated from the supply voltage (PELV) and other high-voltage terminals.

Analog output

Analog output 1, terminal number	42
Current range	0-20 mA
Maximum load to frame	500 Ω
Maximum fault	0.8 % of full scale

The analog output is galvanically separated from the supply voltage (PELV) and other high-voltage terminals.

MCB 114 sensor input module

Analog input 3, terminal number	2
Current range	0/4-20 mA
Input resistance	< 200 Ω
Analog inputs 4 and 5, terminal number	4, 5 and 7, 8
Signal type, 2- or 3-wire	Pt100/Pt1000

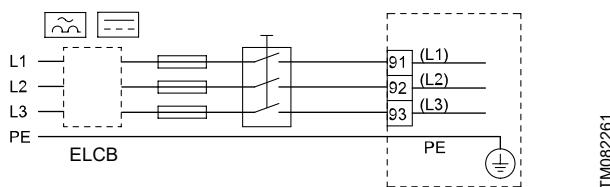

Miscellaneous data

STO application

The STO signal must be SELV or PELV supplied.

Electrical connection

Example of three-phase mains connection of CUE with main switch, backup fuses and additional protection

Electrical protection

Protection against electric shock, indirect contact

The leakage current to protective earth exceeds 3.5 mA, and a reinforced earth connection is required.

Protective conductors must always have a yellow and green (PE) or yellow, green and blue (PEN) colour marking.

Instructions according to EN IEC 61800-5-1:

- CUE must be stationary, installed permanently and connected permanently to the mains supply.
- The protective earth connection must be carried out with duplicate protective conductors or with a single reinforced protective conductor with a cross-section of minimum 10 mm².

Protection against short circuit, fuses

CUE and the supply system must be protected against short circuit.

Grundfos requires that the backup fuses mentioned in section Cable cross-section to signal terminals are used for protection against short circuit.

CUE offers complete short-circuit protection in case of a short circuit on the motor output.

Additional protection

If CUE is connected to an electrical installation where an earth leakage circuit breaker (ELCB/RCD) is used as additional protection, the circuit breaker must be of a type marked with the following symbols:

The circuit breaker is type B.

The total leakage current of all the electrical equipment in the installation must be taken into account.

The leakage current of CUE in normal operation can be seen in section Electrical data.

During startup and in asymmetrical supply systems, the leakage current can be higher than normal and may cause the ELCB/RCD to trip.

Related information

[Mains supply \(L1, L2, L3\)](#)

Motor protection

The motor requires no external motor protection. CUE protects the motor against thermal overloading and blocking.

Protection against overcurrent

CUE has an internal overcurrent protection for overload protection on the motor output.

Protection against mains voltage transients

CUE is protected against mains voltage transients according to EN 61800-3, second environment.

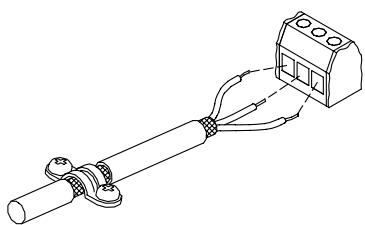

EMC-correct installation

The motor cable must be screened for CUE to meet EMC requirements.

This section provides guidelines for good practice when installing CUE. Follow these guidelines to meet EN 61800-3, first environment.

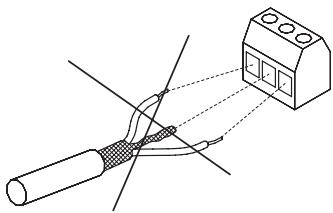

- Use only motor and signal cables with a braided metal screen in applications without output filter. There are no special requirements to supply cables, apart from local requirements.
- Leave the screen as close to the connecting terminals as possible. See figure Example of three-phase mains connection of CUE with main switch, backup fuses and additional protection.
- Avoid terminating the screen by twisting the ends. See figure Do not twist the screen ends. Use cable clamps or EMC screwed cable entries instead.
- Connect the screen to frame at both ends for both motor and signal cables. See figure Example of connection of a 3-conductor bus cable with screen connected at both ends. If the controller has no cable clamps, connect only the screen to the CUE cabinet. See fig. Example of connection of a 3-conductor bus cable with screen connected to CUE (controller with no cable clamps).
- Avoid unscreened motor and signal cables in electrical cabinets with frequency converters.
- Make the motor cable as short as possible in applications without output filter to limit the noise level and minimise leakage currents.
- Tighten screws for frame connections whether a cable is connected or not.
- Keep mains cables, motor cables and signal cables separated in the installation if possible.

Other installation methods may give similar EMC results if the above guidelines for good practice are followed.

2	CUE

RFI filters

To meet the EMC requirements, CUE comes with the following types of built-in radio-frequency interference filter (RFI).

Voltage [V]	Typical shaft power P2 [kW (hp)]	RFI filter type
3 x 380-500	0.55 - 90 (0.75 - 125 hp)	C1

Description of RFI filter type

C1: For use in domestic areas.

RFI filter type is according to EN 61800-3.

Mains and motor connection

! Check that the mains voltage and frequency correspond to the values on the nameplate of CUE and the motor.

! The motor cable must be screened for CUE to meet EMC requirements.

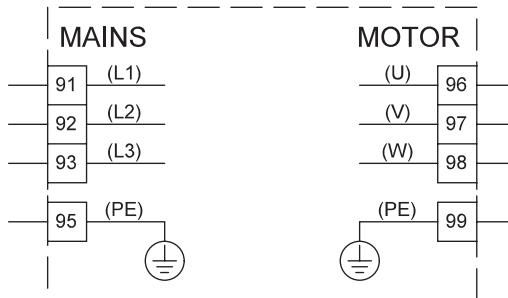

The supply voltage and frequency are marked on the CUE nameplate. Make sure that CUE is suitable for the power supply of the installation site.

Main switch

A main switch can be installed before the CUE cabinet according to local regulations. See figure Example of three-phase mains connection of CUE with main switch, backup fuses and additional protection.

Wiring diagram

The wires in the terminal box must be as short as possible. Excepted from this is the protective conductor which must be so long that it is the last one to be disconnected in case the cable is inadvertently pulled out of the cable entry.

TM038799

3. Fix the screened cable with a cable clamp.

TM039020

Motor connection, B2

STO installation, optional

To enable the integrated STO, follow these steps:

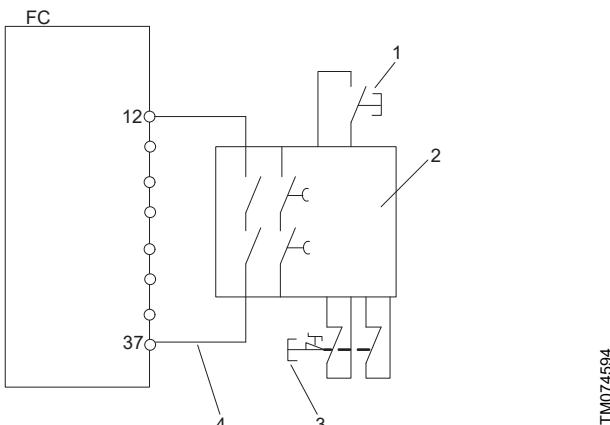

1. Remove the jumper wire between control terminals 37 and 12 or 13. Cutting or breaking the jumper is not sufficient to avoid short-circuiting.

Remove jumper

2. Connect an external safety-monitoring relay via a NO safety function to terminal 37 (STO) and either terminal 12 or 13, 24 V DC.

Select and apply the components in the safety control system appropriately to achieve the desired level of operational safety. Before integrating and using STO in an installation, carry out a thorough risk analysis on the installation to determine whether the STO functionality and safety levels are appropriate and sufficient.

STO wiring

Pos.	Description
1	Reset button
2	Safety relay (category 3, PL d or SIL2)
3	Emergency stop button
4	Short-circuit protected cable if the product is not installed inside an IP54 cabinet.

Restart behaviour after STO activation

By default the STO function is set to unintended-restart prevention behaviour. To terminate STO and resume normal operation with manual reset, do the following:

- Reapply 24 V DC supply to terminal 37.
- Send a reset signal via bus, Digital I/O or the reset button.
- Set the STO function to automatic restart by changing the value of 5-19 terminal 37 "Safe Stop" from default value 1, "Safe Stop Alarm" to value 3, "Safe Stop Warning".

Automatic restart means that STO is terminated, and normal operation is resumed, as soon as the 24 V DC is applied to terminal 37. No reset signal is required.

Restart settings

- Remove the 24 V DC voltage supply to terminal 37 by using the interrupt device while the frequency converter drives the motor, so that the mains supply is not interrupted.
- Check that the motor coasts and that the alarm Safe Stop displays in the local operating panel if mounted.
- Reapply 24 V DC to terminal 37.
- Ensure that the motor remains in the coasted state.
- Send reset signal via bus, Digital I/O or the reset button.
- Ensure that the motor becomes operational again.

Connecting the signal terminals

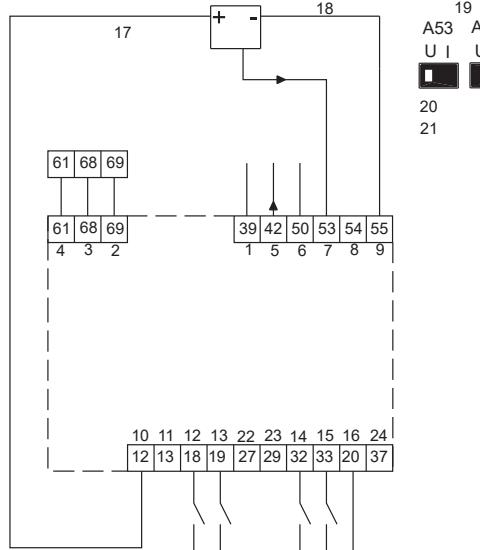

As a precaution, signal cables must be separated from other groups by reinforced insulation in their entire lengths.

Connect the signal cables according to the guidelines for good practice to ensure EMC-correct installation. See section Restart behaviour after STO activation.

- Use screened signal cables with a conductor cross-section of minimum 0.5 mm² and maximum 1.5 mm².
- Use a 3-conductor screened bus cable in new systems.

Access to signal terminals

All signal terminals are behind the terminal cover of the CUE front. Remove the terminal cover as shown in the figure below.

Access to signal terminals, B2, C1

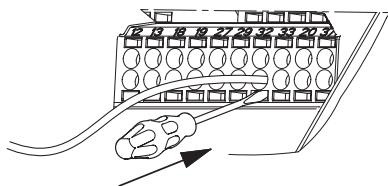

TM039025

Signal terminals, all enclosures

Fitting the conductor

1. Remove the insulation at a length of 9 to 10 mm.
2. Insert a screwdriver with a tip of maximum 0.4 x 2.5 mm into the square hole.
3. Insert the conductor into the corresponding round hole. Remove the screwdriver. The conductor is now fixed in the terminal.

TM039026

Fitting the conductor into the signal terminal

Setting the analog inputs, terminals 53 and 54

Contacts A53 and A54 are positioned behind the operating panel and used for setting the signal type of the two analog inputs.

The factory setting of the inputs is voltage signal "U" and "U".

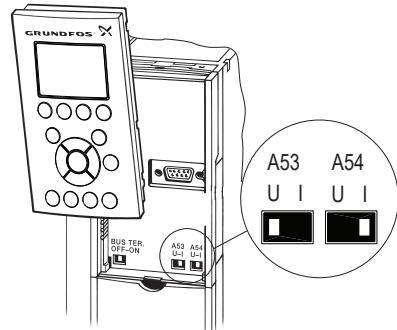

The factory setting of TPE Series 2000 inputs is voltage signal "U" and "I".

If a 0/4-20 mA sensor is connected to terminal 54, the input must be set to current signal "I".

Switch off the power supply before setting contact A54.

Remove the operating panel to set the contact. See the figure below.

TM039104

Setting contact A54 to current signal "I"

RS-485 GENibus network connection

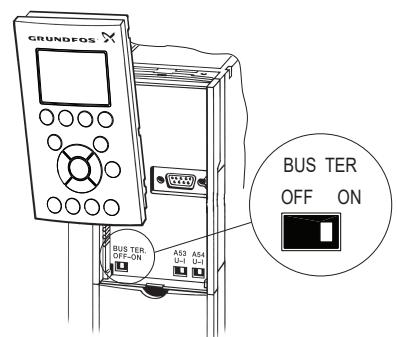

One or more CUE units can be connected to a control unit via GENibus.

The reference potential, GND, for RS-485 (Y) communication must be connected to terminal 61.

If more than one CUE unit is connected to a GENibus network, the termination contact of the last CUE must be set to "ON" (termination of the RS-485 port).

The factory setting of the termination contact is "OFF" (not terminated).

Remove the operating panel to set the contact. See the figure below.

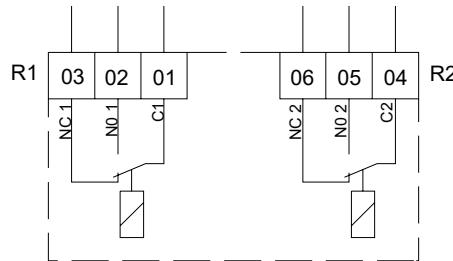

TM039006

Setting the termination contact to "ON"

Connecting the MCB 114 sensor input module

The MCB 114 is an option offering additional analog inputs for CUE.

Configuration of MCB 114

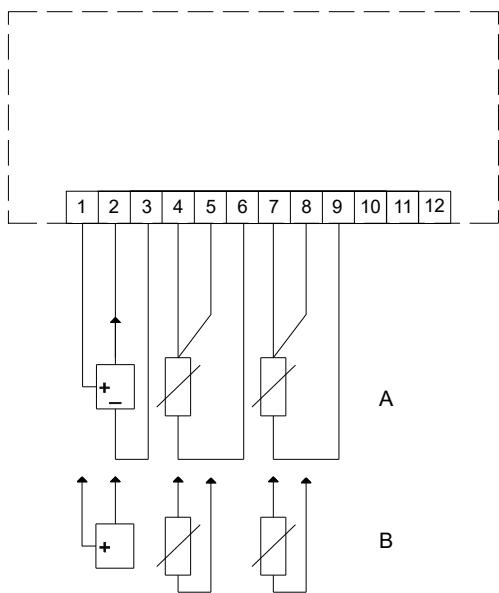

MCB 114 is equipped with three analog inputs for the following sensors:

- One additional sensor 0/4-20 mA.
- Two Pt100/Pt1000 temperature sensors for measurement of motor bearing temperature or an alternative temperature, such as liquid temperature.

When MCB 114 has been installed, CUE automatically detects if the sensor is Pt100 or Pt1000 when it is switched on.

Wiring diagram, MCB 114

When using Pt100 with a 3-wire cable, the resistance must not exceed 30 Ω .

27. Curve charts

How to read the curve charts

TM081721

Pos.	Description
1	Pump type and frequency.
2	QH curve for the individual single-head pump. The bold curve indicates the recommended performance range.
3	The power curve indicates the pump input power [P_2].
4	The NPSH (3 %) curve shows the maximum net positive suction head, NPSH, required to ensure that the pump head is not reduced by more than 3 %. The available system pressure at the pump inlet must be according to the NPSH (3 %) curve.
5	The eta curve shows the pump efficiency.

Curve conditions

The guidelines below apply to the curves shown on the following pages:

- Tolerances to ISO 9906:2012 Grade 3B.
- The curves apply to the performance of **single-head three-phase pumps**. For other pump versions, please see the exact curves in Grundfos Product Center. See section Grundfos Product Center. For other pump versions, the performance may differ for the following reasons:
 - The valve in twin-head pumps may cause losses.
 - Single-phase motors run at lower speed.

Note: Grundfos does not recommend continuous parallel operation of twin-head pumps, except TPE2 D, TPE3 D, due to the increased flow rate in the pump. A too high flow rate results in noisy operation, increased wear of the impeller due to cavitation, etc.

- QH curves of the individual single-head pumps are shown with expected speed of a three-phase mains-operated motor. For further information, see the tables of technical data on the following pages.

The performance of the single-phase motor is slightly reduced. Please refer to Grundfos Product Center for the exact single-phase curves. See section Grundfos Product Center.

- Curves of TPE Series 1000 pumps and TPE Series 2000 pumps are shown as nominal curves (100 % curves) only. Please refer to Grundfos Product Center for the exact curves. See section Grundfos Product Center.
- Measurements have been made with airless water at a temperature of 20 °C.
- The curves apply to a kinematic viscosity of μ equal to 1 mm²/s (1 cSt).
- Due to the risk of overheating, the pump must not run constantly below the minimum flow rate indicated by the bold curves.
- If the pumped liquid density and/or viscosity are higher than those of water, it may be necessary to use a motor with a higher performance.

- TP, TPD pumps with 3-phase motors from 0.12 to 0.37 kW are fitted with IE2 motors, 0.55 to 55 kW with IE3 motors, 75 to 200 kW with IE4 motors and 250 kW and up with IE3 motors.
- TP, TPE pumps with a H4 dimension are delivered with a base plate.
- The integrated CUE can be positioned in an angle deviating from this drawing with up to 30 degrees. For further information look in Grundfos Product Center.

- TP, TPD pumps with 3-phase motors from 0.12 to 0.37 kW are fitted with IE2 motors, 0.55 to 55 kW with IE3 motors, 75 to 200 kW with IE4 motors and 250 kW and up with IE3 motors.
- TP, TPE pumps with a H4 dimension are delivered with a base plate.

29. Minimum efficiency index

Minimum efficiency index, MEI, means the dimensionless scale unit for hydraulic pump efficiency at best efficiency point, part load and overload. The Commission Regulation, EU, sets efficiency requirements to MEI greater than or equal to 0.10 as from 1 January 2013 and MEI greater than or equal to 0.40 as from 1 January 2015. An indicative benchmark for the best-performing water pump available on the market as from 1 January 2013 is determined in the regulation.

- The benchmark for the most efficient water pumps is MEI greater than or equal to 0.70.
- The efficiency of a pump with a trimmed impeller is usually lower than that of a pump with the full impeller diameter. The trimming of the impeller will adapt the pump to a fixed duty point, leading to reduced energy consumption. The minimum efficiency index, MEI, is based on the full impeller diameter.
- The operation of this water pump with variable duty points may be more efficient and economic when controlled, for example, by the use of a variable-speed drive that matches the pump duty to the system.
- Information on benchmark efficiency is available at <http://europump.eu/efficiencycharts>.

30. Accessories

Unions and valves, TP Series 100

A union kit consists of two cast-iron union tails, two cast-iron union nuts and two EPDM gaskets.

Pump type, union connection	Pressure stage	Size	Product number
TP, TPE 25	PN 10	Rp 3/4	529921
		Rp 1	529922
		Rp 1 1/4	529924
TP, TPE 32	PN 10	Rp 1	509921
		Rp 1 1/4	509922

A valve kit consists of two brass valves, two brass union nuts and two EPDM gaskets.

The valve housing is made of pressure die-cast brass.

Pump type, valve connection	Pressure stage	Size	Product number
TP, TPE 25	PN 10	Rp 3/4	519805
		Rp 1	519806
		Rp 1 1/4	519807
TP, TPE 32	PN 10	Rp 1 1/4	505539

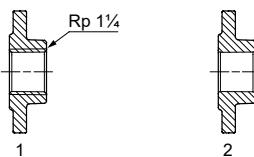

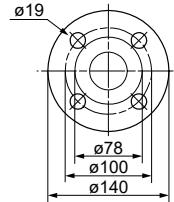

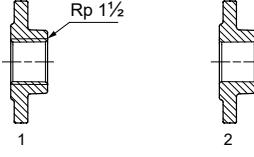

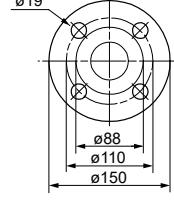

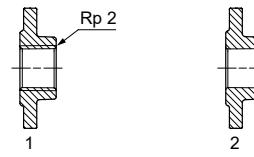

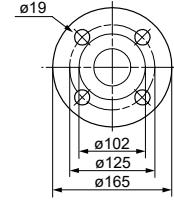

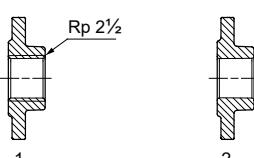

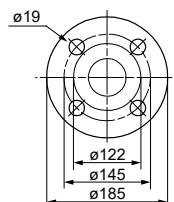

A union kit consists of two bronze union tails, two brass union nuts and two EPDM gaskets.

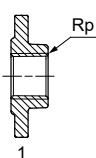

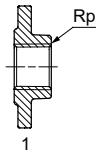

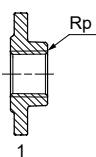

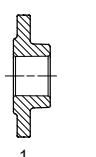

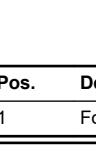

The valve housing is made of pressure die-cast brass.

Pump type, union connection	Pressure stage	Size	Product number
TP, TPE 25	PN 10	Rp 3/4	529971
		Rp 1	529972
TP, TPE 32	PN 10	Rp 1 1/4	509971

Counterflanges

A flange kit consists of two steel flanges, two gaskets of asbestos-free material IT 200, and the requisite number of bolts.

Base plates

Note: TPE2, TPE3 and TP Series 100 pumps are not designed to be supplied with a base plate. Base plates are supplied as standard with TP and TPE pumps with 11 kW motors and above.

Some of the TP Series 300 pumps are provided with mounting feet and cannot be supplied with a base plate. See the figure below.

Insulating kits

Insulating kits are available for TPE2 and TPE3 pumps.

The insulating kit consists of two shells.

The insulating kit is tailored to the individual pump model and encloses the entire pump housing, thus providing optimum insulation.

Temperature sensors

Temperature sensor, TTA

Temperature sensor with Pt100 temperature sensor fitted in a Ø6 x 100 mm measuring tube made of stainless steel, DIN 1.4571 and a 4-20 mA sensor built into a type B head DIN 43.729.

The connecting head is made of painted pressure die-cast aluminium with Pg 16 screwed connection, stainless screws and neoprene rubber gasket.

The sensor is built into the system either by means of a cutting ring bush or by means of one of the two matching protecting tubes Ø9 x 100 mm or Ø9 x 50 mm, respectively.

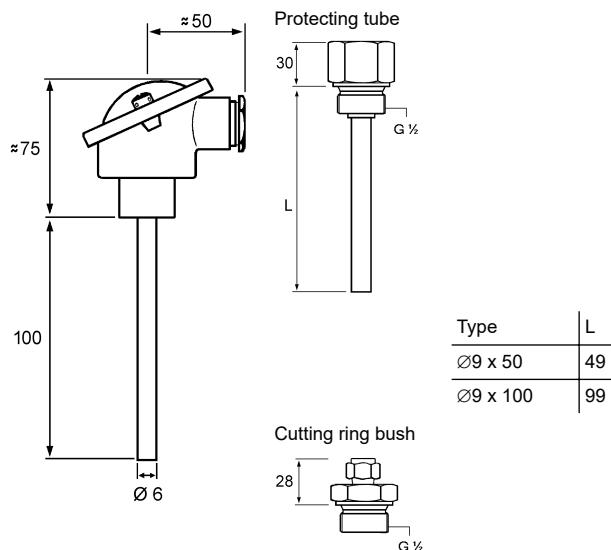

The protecting tube has a G 1/2 connection.
Cutting ring bush or protecting tube must be ordered separately.

Technical data

Type	TTA (-25) 25	TTA (0) 25	TTA (0) 150	TTA (50) 100
Product number	96430194	96432591	96430195	96432592
Measuring range	-25 to +25 °C	0 to +25 °C	0 to +150 °C	50 to +100 °C
Measuring accuracy	According to IEC 751, class B, 0.3 °C at 0 °C			
Response time, τ (0.9) in water 0.2 m/s	Without protecting tube: With oil-filled protecting tube:	28 seconds 75 seconds		
Enclosure class		IP55		
Output signal		4-20 mA		
Supply voltage		8-35 VDC		
EMC, electromagnetic compatibility	Emission: Immunity:	According to EN 50081 According to EN 50082		

Accessories

Type	Protecting tube Ø9 x 50 mm	Protecting tube Ø9 x 100 mm	Cutting ring bush
Product number	96430201	96430202	96430203
Description	Protecting tube of stainless steel SINOX SSH 2 for Ø6 mm measuring tube. Pipe connection G 1/2.	Cutting ring bush for Ø6 mm measuring tube. Pipe connection G 1/2.	

Dimensional sketch

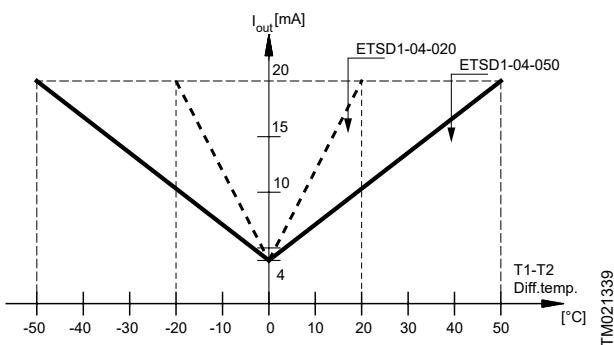

Differential-temperature sensor, HONSBERG

The temperature sensors T1 and T2 measure the temperature in their respective location at the same time. Besides the temperature measurement, the T1 features an electronic unit calculating the temperature difference between T1 and T2 and transmitting the result as a 4-20 mA signal via a current amplifier.

As the measured signal transmitted from the T2 is also a current signal, a relatively large distance is allowed between T2 and T1.

As appears from the figure below, it has no effect on the output signal, I_{out} , which of the sensors that measures the highest temperature.

Thus, the current signal generated will always be positive between 4 and 20 mA.

Sensor characteristics

Technical data

Type	ETSD1-04-020K045 + ETSD2-K045	ETSD1-04-050K045 + ETSD2-K045
Product number	96409362	96409363
Measuring range: Temperature difference (T1-T2) or (T2-T1)	0 to +20 °C	0 to +50 °C
Supply voltage	15-30 VDC	
Output signal	4-20 mA	
Measuring accuracy	± 0.3 % FS	
Repeatability	± 1 % FS	
Response time, τ (0.9)	2 minutes	
Ambient temperature	-25 to +85 °C	
Operating temperature of T1 and T2	-25 to +105 °C	
Maximum distance between T1 and T2	300 m with screened cable	
Electrical connection	Between T1 and T2: M12 x 1 plug, output signal with DIN 43650-A plug type	
Storage temperature	-45 to +125 °C	
Short-circuit-proof	Yes	
Protected against polarity reversal	Yes, up to 40 V	
Materials in contact with liquid	Stainless steel, DIN 1.4571	
Enclosure class	IP65	
EMC, electromagnetic compatibility	Emission: According to EN 50081 Immunity: According to EN 50082	

ETSD1-	04-	020	K	045	Specification
ETSD1-					Reference temperature, T1.
	04-				0 °C corresponds to 4 mA.
		020			20 °C corresponds to 20 mA.
			050		50 °C corresponds to 20 mA.
			K		Material in contact with liquid: Stainless steel, DIN 1.4571.
				045	Length of sensing element: 45 mm.

ETSD2-	K	045	Specification
ETSD2-			Reference temperature, T2.
	K		Material in contact with liquid: Stainless steel, DIN 1.4571.
		045	Length of sensing element: 45 mm.

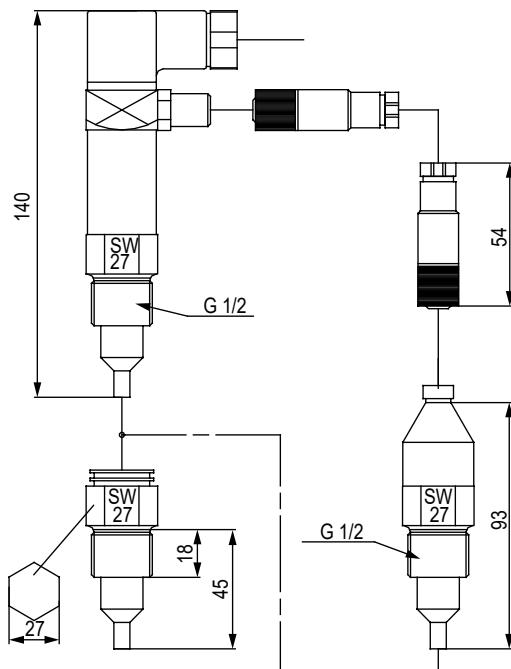

Installing the sensor

Fit the two sensors in such a way that the sensing elements are located in the middle of the flow of the liquid to be measured.

For tightening, use only the hexagon nut.

You can turn the upper part of the sensors to any position suitable for the connection of cables.

The sensors have a G 1/2 thread. See the figure below.

TM020705

Fitting kit for TPED with two sensors		96491010

Select the differential pressure sensor so that the maximum pressure of the sensor is higher than the maximum differential pressure of the pump.

Second sensor for TPED pump

Order a second differential pressure sensor kit for TPED pumps when two sensors are needed.

The kits are set as optional part for TPED Series 2000 pumps up to 11 kW 2-pole and 7.5 kW 4-pole.

Differential pressure sensor kit	Pressure range [bar]	Product number

External potentiometer with cabinet for wall mounting	625468

Grundfos GO

Grundfos GO is used for wireless infrared or radio communication with the pumps.

MI 301

MI 301 is a module with built-in infrared and radio communication. Use MI 301 in conjunction with Android or iOS-based smart devices with a Bluetooth connection. MI 301 has rechargeable Li-ion battery and you must charge it separately.

TM053890

MI 301

Supplied with the product:

- Grundfos MI 301
- sleeve
- battery charger
- quick guide.

CIU communication interface units

GRA6118

Grundfos CIU communication interface unit

The CIU units enable communication of operating data, such as measured values and setpoints, between TPE pumps and a building management system. The CIU unit incorporates a 24-240 VAC/VDC power supply module and a CIM module. You can mount the CIU unit on a DIN rail or on a wall. For further information see section Communication.

We offer the following CIU units:

Description	Fieldbus protocol	Product number
CIU 100	LONWorks for pumps	96753735
CIU 150	PROFIBUS DP	96753081
CIU 200	Modbus RTU	96753082
CIU 250 ¹⁾	GSM	96787106
CIU 270 ¹⁾	GRM	96898819
CIU 300	BACnet MS/TP	96893769
CIU 500	Ethernet, BACnet IP	
CIU 500	Ethernet, Modbus TCP	
CIU 500	Ethernet, PROFINET IO	96753894
CIU 500	Ethernet, GRM IP	
CIU 500	Ethernet, EtherNet/IP	
CIU 900	CIU box without CIM	99448387
CIU 901	CIU box with IO 270 only	99448389

¹⁾ Antenna not included. See section Antennas and battery.

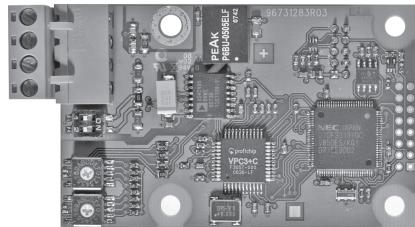

For further information about data communication via CIU units and fieldbus protocols, see the CIU documentation available in Grundfos Product Center. See section Grundfos Product Center.

CIM communication interface modules

GRA6121

Grundfos CIM communication interface module

The CIM modules enable communication of operating data, such as measured values and setpoints, between TPE pumps and a building management system. The CIM modules are add-on communication modules which are fitted in the terminal box of TPE pumps. For further information see section Communication.

Note: CIM modules must be fitted by authorised personnel.

We offer the following CIM modules:

Description	Fieldbus protocol	Product number
CIM 100	LONWorks for pumps	96824797
CIM 110	LONWorks for multipump	96824798
CIM 150	PROFIBUS DP	96824793
CIM 200	Modbus RTU	96824796
CIM 250 ¹⁾	GSM	96824795
CIM 260-EU ¹⁾	3G/4G cellular	99439302
CIM 260-US ¹⁾	3G/4G cellular	99439306
CIM 270 ¹⁾	GRM	96898815
CIM 280-EU ¹⁾	GiC/GRM 3G/4G	99439724
CIM 280-US ¹⁾	GiC/GRM 3G/4G	99439725
CIM 300	BACnet MS/TP	96893770
CIM 500	Ethernet, BACnet IP	
CIM 500	Ethernet, Modbus TCP	
CIM 500	Ethernet, PROFINET IO	98301408
CIM 500	Ethernet, GRM IP	
CIM 500	Ethernet, EtherNet/IP	

¹⁾ Antenna not included. See section Antennas and battery.

For further information about data communication via CIM modules and fieldbus protocols, see the CIM documentation available in Grundfos Product Center. See section Grundfos Product Center.

EMC filter

EMC, electromagnetic compatibility to EN 61800-3

Motor [kW]		Emission/immunity
2-pole	4-pole	
0.37	0.37	
0.55	0.55	
0.75	0.75	Emission: Motors may be installed in residential areas (first environment), unrestricted distribution, corresponding to CISPR11, group 1, class B.
1.1	1.1	
1.5	1.5	
2.2	2.2	Immunity: Motors fulfil the requirements for both the first and second environment.
3.0	3.0	
4.0	4.0	
5.5	-	
-	5.5	Emission: The motors are category C3, corresponding to CISPR11, group 2, class A, and may be installed in industrial areas (second environment).
7.5	7.5	
11	-	If fitted with an external Grundfos EMC filter, the motors are category C2, corresponding to CISPR11, group 1, class A, and may be installed in residential areas (first environment).

TM029198

EMC filter

The EMC filter for residential areas is available as a complete kit ready for installation.

Product	Product number
EMC filter, TPE 5.5 kW, 4-pole and 7.5 kW	96041047
EMC filter, TPE 11 kW, 2-pole	96478309

CUE accessories

Add-on module	Type	Product number
Sensor input module	MCB 114	96760901
Multipump module ¹⁾	MCO 101	99753103

¹⁾ Only possible with the Constant pressure control mode.

31. Minimum inlet pressure - NPSH

To ensure optimum and noiseless operation, we recommend that you use the minimum inlet pressure values shown in sections TPE2, TPE2 D, TPE3, TPE3 D to TP, TPD, 6-pole, PN 16.

A minimum inlet pressure is required to avoid pressure drop that may cause cavitation.

$$p_s \geq \left(NPSH_R \times \rho \times g - \frac{1}{2} \times \rho \times c^2 \right) \times 0.00001 - p_b + p_d$$

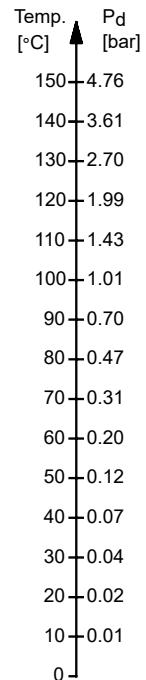

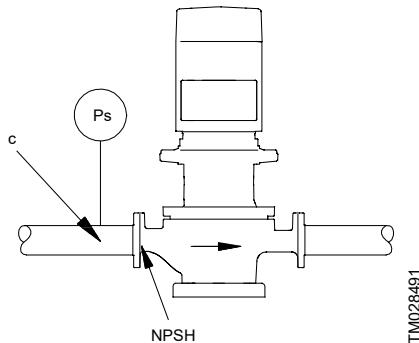

[bar relative]

- p_s = Minimum inlet pressure in bar.
 $NPSH_R$ = The required Net Positive Suction Head in m head, to be read from the NPSH curve at the highest flow the pump will be delivering.
 ρ = Density of the pumped liquid measured in kg/m³.
 g = Gravitational acceleration measured in m/s. For estimated calculations use the value 9.81 m/s².
 c = Flow velocity of the pumped liquid at the pressure gauge. Insert the flow velocity as the unit [m/s].
 See individual curve charts from section How to read the curve charts.

Use the following formula to calculate the minimum inlet pressure, p_s in bar relative. The pressure gauge value on the pump inlet side.

Note: Base the calculation of the minimum inlet pressure on the maximum required flow.

- p_b = Barometric pressure in bar. Set the barometric pressure to 0.97 bar.
Note: Only occasionally the pressure is as high as 1 bar; this value is also at sea level.
 p_d = Vapour pressure in bar. See the figure below.

TM030371

Minimum inlet pressure

32. Key application data

Dear customer,

If you need an ATEX certificate or if you cannot select the pump on the basis of the guidelines in section Pumped liquids, please fill in the following form in cooperation with a Grundfos representative. This will help to ensure that Grundfos supplies you with a pump solution adapted to meet exactly your needs in terms of pump type, pump materials, shaft seal type, elastomers and accessories.

Pumped liquids

Operating conditions

Pumped liquid

Type of liquid:		
Chemical composition, if available:		
Distilled/demineralised water?	Yes: _____	No: _____
Conductivity of distilled or demineralised water:	[µS/cm]	
Minimum liquid temperature:	[°C]	
Maximum liquid temperature:	[°C]	
Vapour pressure of liquid:	[bar]	
Liquid concentration:	%	
Liquid pH value:		
Dynamic liquid viscosity:	[cP] = [mPa s]	
Kinematic liquid viscosity:	[cSt] = [mm ² /s]	
Liquid density:	[kg/m ³]	
Specific heat capacity of liquid:	[kJ/(kg·K)]	
Air or gas in liquid?	Yes: _____	No: _____
Solids in liquid?	Yes: _____	No: _____
Contents of solids in liquid, if available:	% of mass	
Additives in liquid?	Yes: _____	No: _____
Does the liquid crystallise?	Yes: _____	No: _____
When does crystallisation happen?		
Does the liquid get sticky when volatiles evaporate from the pumped liquid?	Yes: _____	No: _____
Description of 'sticky' circumstances:		

Does the liquid get sticky when volatiles evaporate from the pumped liquid?

Yes: _____ No: _____

Description of 'sticky' circumstances:

Is the liquid hazardous or poisonous?

Yes: _____

No: _____

Special measures to be taken into account when dealing with this hazardous or poisonous liquid:

Special measures for handling this liquid:

CIP liquid, cleaning-in-place

Type of liquid:

Chemical composition, if available:

Liquid temperature during operation:

_____ [°C]

Maximum liquid temperature:

_____ [°C]

Vapour pressure of liquid:

_____ [bar]

Liquid concentration:

_____ %

Liquid pH value:

Pump sizing

Main duty point:

Q: _____ [m³/h]

H: _____ [m]

Maximum duty point:

Q: _____ [m³/h]

H: _____ [m]

Minimum duty point:

Q: _____ [m³/h]

H: _____ [m]

Ambient operating conditions

Ambient temperature:

_____ [°C]

Altitude above sea level:

_____ [m]

Pressure

Minimum inlet pressure:

_____ [bar]

Maximum inlet pressure:

_____ [bar]

Outlet pressure, inlet pressure and head:

_____ [bar]

ATEX marking

Required marking of the pump

Customer's equipment group, e.g. II:

Customer's equipment category, e.g. 2, 3:

Gas, G, and/or dust, D:

Gas (G): _____

Dust (D): _____

Gas and dust (G/D): _____

Required marking of the motor

Protection type, e.g. d, de, e, nA:

Maximum experimental safe gap, e.g. B, C:

Temperature class

gas, e.g. T3, T4, T5:

_____ [°C]

dust, e.g. 125 °C:

_____ [°C]

Description/sketch

Detailed description of ATEX application

Attach a drawing, if possible:

ATEX certificate required _____

Yes: _____ No: _____

Frequency converter

Frequency converter option wanted? Yes: _____

No: _____

Control parameter:

Pressure: _____ Temperature: _____ Flow rate: _____ Other: _____

Detailed description of requirements

Attach a drawing, if possible:

System information

Please provide us with information about your system and a simple sketch, if possible. This gives us an idea as to whether you need accessories or monitoring equipment, or whether you already have a suitable system which makes it unnecessary to attach any further equipment.

33. Grundfos Product Center

Online search and sizing tool to help you make the right choice.

From the international view, you can select your specific country to view the product range available to you.

International view: <https://product-selection.grundfos.com>

All the information you need in one place

Performance curves, technical specifications, pictures, dimensional drawings, motor curves, wiring diagrams, spare parts, service kits, 3D drawings, documents, system parts. The Product Center displays any recent and saved items - including complete projects - right on the main page.

Downloads

On the product pages, you can download installation and operating instructions, data booklets, service instructions, etc., in PDF format.

When you select your country, you will see the menus below. Note that some menus may not be available depending on the country.

Example: <https://product-selection.grundfos.com/uk>

Pos. Description

- 1 **Products & services** enables you to find products and documents by typing a product number or name into the search field.
- 2 **Applications** enables you to choose an application to see how Grundfos can help you design and optimise your system.
- 3 **Products A-Z** enables you to look through a list of all the Grundfos products.
- 4 **Categories** enables you to look for a product category.
- 5 **Liquids** enables you to find pumps designed for aggressive, flammable or other special liquids.
- 6 **Product replacement** enables you to find a suitable replacement.
- 7 **WWW** enables you to select the country, which changes the language, the available product range and the structure of the website.
- 8 **Sizing** enables you to size a product based on your application and operating conditions.
