## CONTROL VALVES RV 111 COMAR line

## The valves series RV 111 COMAR are control valves of a compact construction with

 external threaded coupling connection. The valves excel with minimum dimensions and weight, quality control function and a high tightness in closed position. Thanks to an unique LDMspliné, flow characteristic which has been optimized for thermodynamic processes control, the valves are ideal for applications in heating and air-conditioning. In regard of a sophisticated design of internal parts and long service life of packing, the valves fulfill every demand fora long-time service without necessary maintenance.The valves are optionally manufactured either two-way or three-way. The part of the delivery is a screw joint enabling a quick and easy installation to an appliance.
Assembled with electromechanic actuators, the valve can be controlled with 3-point or continuous signal. The part of the delivery of valves RV 111 R is also a hand wheel which can be used for the valve control until assembling with an actuator (LDM, Siemens or Sauter).

## Application

Used materials for throttling trim which consist of plug made of highquality stainless steel and soft sealing elemnts, ensure a hermetic tightness in both ports and enable the valves to be used not only in common warm-water and hot-water regulation circuits in heating but also in applications with special characte-ristic features of process medium such as in refrigerating industry and airconditioning.

## Process media

The valves series RV 111are suitable for applications where process medium is water or air. Further they can be used for refrigerating media and other non-aggressive liquids or gases with temperature ranging from $+2{ }^{\circ} \mathrm{C}$ to $+150^{\circ} \mathrm{C}$. The valves are not applicable to conditions with cavitation. Sealing surfaces of control trim are resistant to common sludge or water impurities. Yet it is recommended to pipe a strainer in front of valve to ensure a reliable function and tightness in case there are abrasive particles present.

## Installation

The valves can be installed in any position except position when the actuator is under the valve body. The flow direction is indicated on the valve body - inlet ports are indicated by letters A and B, outlet port $A B$.

## Flow characteristic selection in regard of valve stroke

To make right selection of valve flow characteristic, it is suitable to carry out checking of what stroke values will be reached in different operation states. We recommend to carry out such checking at least for minimal, nominal and maximal flow rates. The principle for flow characteristic selection is to avoid, if possible, 5-10\% of the beginning and end of the valve stroke range.
To calculate valve stroke at different operating conditions with different types of flow characteristics is possible with the advantage of using LDM's calculation programme VALVES. The programme serves for complete design of valve from Kv calculation to specification of a concrete valve with its actuator.

## Packing 0-ring EPDM

Well proven type of packing with sealing elements made of high quality EPDM is suitable for operating with temperature of, +2 to $+130^{\circ} \mathrm{C}$. The packing excels with its reliability and long time tightness. Its properties ensure safe usage in no-maintanance applications. Main preferences of the packing is low frictional forces, sealing capability in both ports (even when there is underpressure in the valve ) and service life exceeding 500000 cycles.

# Electric actuators <br> LDM 

ANT3-5.1x(SC)
ANT3-5.2x(SC)
ANT3-5.2x(SC)

Electromechanical actuators ANT3-5 are designed to control the regulating valves LDM series RV 111 COMAR line. Its connection to the valve ensures a zero clearance between stem of the actuator and the valve so the precise regulating ability is ensured even for minimal position changes. The actuators are self-adaptive. The end positions are limited by the valve stroke. To communicate with a control system, the actuators are equipped with either standard 3-position control or proportional control (options: $0 . .10 \mathrm{~V}, 2 . .10 \mathrm{~V}, 0 . .20 \mathrm{~mA}$ or $4 . .20 \mathrm{~mA}$ ). The version marked "SC" contains electronically controlled fail-safe function activated by power supply failure, by valves with proportional control by failure of voltage at NF terminal as well. In setting mode for the actuators with proportional control it is possible to define a final position in percentage of the stroke value. The actuator automatically runs into that position when the fail-safe function is induced. Standard setting is position "closed". As a source of energy for the fail-safe function, there are block of capacitors which are continuously charged when the actuator is in operation. Service life of capacitors is 10 years what corresponds with service life of the actuator under standard conditions. All the types of ANT actuator are equipped with hand wheel for manual operating.

## Properties

$\rightarrow$ Easy assembly to the valve without the necessity of any adjusting. No tools required
$\rightarrow$ Self-adaptive function precisely sets the stroke range according to the limit positions of the valve stroke
$\rightarrow$ Hand wheel for operating in case of emergency
$\rightarrow$ Stroke indicator for information on actual open position of the valve
$\rightarrow$ Option of equipping with resistance feedback or adjustable position switch (for actuators with 3-position control without safety function)
$\rightarrow$ Intelligent microprocessor control (for actuators with a fail-safe function and proportional control)
$\rightarrow$ Automatic recognition of presence of impurities between the seat and plug of the valve including an algorithm forself-cleaning function (for actuators with proportional control)
$\rightarrow$ Option of control signal $0 . .10 \mathrm{~V}, 2 . .10 \mathrm{~V}, 0 . .20 \mathrm{~mA}, 4 . .20 \mathrm{~mA}$ (for actuators with proportional control)
$\rightarrow$ Option of adjusting a final position for actuators with fail-safe function in range of $0 . .100 \%$ of the stroke
$\rightarrow$ Possibility to read history and detection of failures (for actuators with microprocessor)
$\rightarrow$ Long service life and reliability with a sophisticated and patented design due to a selection of high quality materials
$\rightarrow$ Feedback0(2)-10V or 0(4)-20mAforactuators with microprocessor control
$\rightarrow$ Posibility of digital control (protocol MODBUS)
$\rightarrow$ Adjustable usersetting of deadband and suppression of control signal zero
$\rightarrow$ The possibility of control signal direction available

## Application

The actuators in combination with LDM valves are designed especially for applications on heating, air-conditioning and refrigerating. There they can take advantage of combination of control flow characteristic LDMspline optimized for heat transfer processes and precision and reliability provided by simple mechanic design. In some applications, it is possible to make use of its fail-safe function which is induced by voltage failure at given terminal and puts the valve to previously defined position.

${ }^{1)}$ Optional accessories. One piece of accessory can be used only. Must be specified in order.
${ }^{2)}$ Standard equipment. It shall be clearly specified in the order (type and range of feedback signal, basic execution 0-10V)

## Optional accessories

Resistance position transmitter $0 . .100 \Omega$ nebo $0 . .1000 \Omega /$ (for 3-position control actuators only without safety function)
Adjustable position switch PS1 (for 3-position control actuators only without safety function)

Wiring diagrams of actuators

$A=172 \mathrm{~mm}$
$B=159 \mathrm{~mm}$
$C=133 \mathrm{~mm}$
$D=26 \mathrm{~mm}$

## Wiring diagrams of actuators

Note: ANT3-5 ... closes the valve by retracting its stem: $\qquad$

ANT3-5.10
3-position control, 24 V AC

## ANT3-5.10SC

3-position control, 24 V AC/DC, fail-safe function

ANT3-5.20
ANT3-5.22
3-position control, 230 V AC

## ANT3-5.20SC

3-position control, 230 V AC, fail-safe function

ANT3-5.21
Proportional control, 230 V AC

## ANT3-5.21SC

Proportional control, 230 V AC, fail-safe function

[^1]
## ANT3-5.11

Proportional control, 24 V AC/DC

ANT3-5.11SC
Proportional control, 24 V AC/DC, fail-safe function

The range and the type of input and output control signal can be adjusted by wiring
