

Data sheet

Pressure relief controller AFPA 2/VFG 22(1)

Description

virtus.danfoss.com

The controller is a self-acting differential pressure relief controller primarily for use in district heating systems. The controller is normally closed and opens on rising differential pressure.

The controller has a control valve, an actuator with one control diaphragm and a spring(s) for pressure setting.

Further on two valve versions are available:

- VFG 22 with metallic sealing cone
- VFG 221 with soft sealing cone

Together with Danfoss intelligent electrical actuator AMEi 6 intelligent optimization functions are available:

- iNET-intelligent network balancing

Main data:

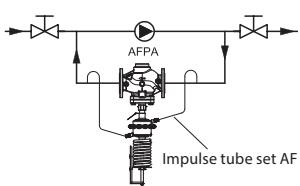

- DN 65-250
- k_{vs} 60-800 m³/h
- PN 16, 25, 40
- Setting range:
0.1-0.4 bar / 0.2-0.8 bar / 0.3(0.4)-1.5 bar / 0.5(1)-3 bar / 1.5-6 bar
- Temperature:
– Circulation water / glycolic water up to 30%: 2 ... 150°C
- Connections:
– Flange

Ordering

Example 1:
Differential pressure controller,
return mounting, DN 65, k_{vs} 60 m³/h,
PN 16, metallic sealing, setting
range 1-3 bar, T_{max} 150 °C, flange

- 1x VFG 22 DN 65 valve
Code no: **065B5500**
- 1x AFPA 2 actuator
Code no: **003G5691**
- 2x Impulse tube set AF
Code no: **003G1391**

Products will be delivered
separately.

**VFG 22 Valve (metallic sealing cone)**

Operating area

 Maximum allowed differential pressure over the controller (Δp_{\max}) at different cavitation factors (z)

Application principles

Installation position

Pressure temperature diagram

Working area is below P-T line and it ends at T_{max} for each valve

Maximum allowed operating pressure as a function of media temperature (according to EN 1092-2)

Maximum allowed operating pressure as a function of media temperature (according to EN 1092-1)

Sizing

Example:

The application demands a maximal flow of 60 m³/h. The minimal differential pressure available over controller is 1.3 bar. Demanded opening setting pressure is 2 bar.

Given Data:

$$\begin{aligned} Q_{\max} &= 60 \text{ m}^3/\text{h} \\ \Delta p_{\text{AFPA}} &= 1.3 \text{ bar} \end{aligned}$$

Calculate the k_v value:

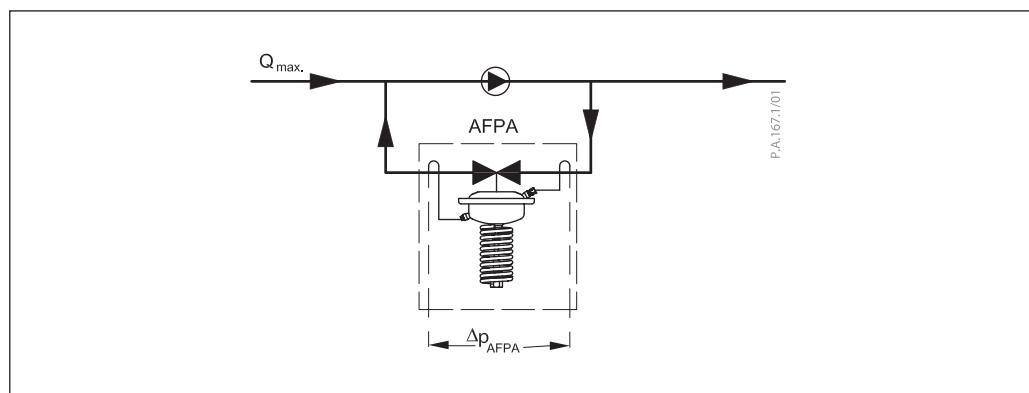

$$k_v = \frac{Q_{\max}}{\sqrt{\Delta p_{\text{AFPA}}}} = \frac{60}{\sqrt{1.3}} = 52.6 \text{ m}^3/\text{h}$$

The first bigger k_v to 52.6 m³/h is 60 m³/h and gives VFG 22 DN 65.

The available setting range to control 2 bar is 0.5-3 bar and is available for DN 65.

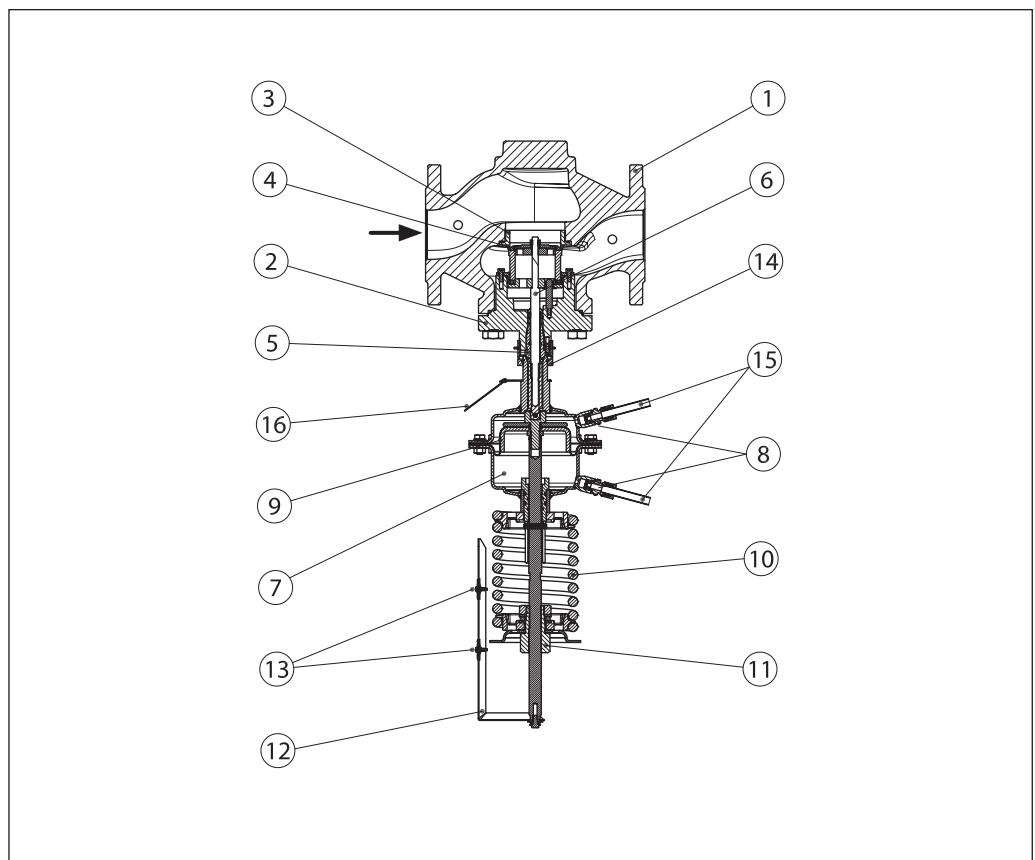

Solution:

AFPA 2 0.5-3 bar
VFG 22 (221) DN 65 k_v 60 m³/h

Design

1. Valve body
2. Valve cover
3. Valve seat
4. Pressure control insert
5. Pressure stuffing box
6. Valve stem
7. Pressure actuator
8. Impulse tube connection
9. Diaphragm
10. Differential pressure setting spring
11. Differential pressure setting nut
12. Setting scale
13. Setting indicator
14. Union nut
15. Impulse tube
16. Identification plate

**Function**

The pressures in front and behind of the control valve are being transferred through the impulse tubes to the actuator chambers and act on control diaphragm for differential pressure control.

The controller became normally closed after commissioning (stretching the spring). It opens on rising differential pressure and closes on falling differential pressure to maintain constant differential pressure.

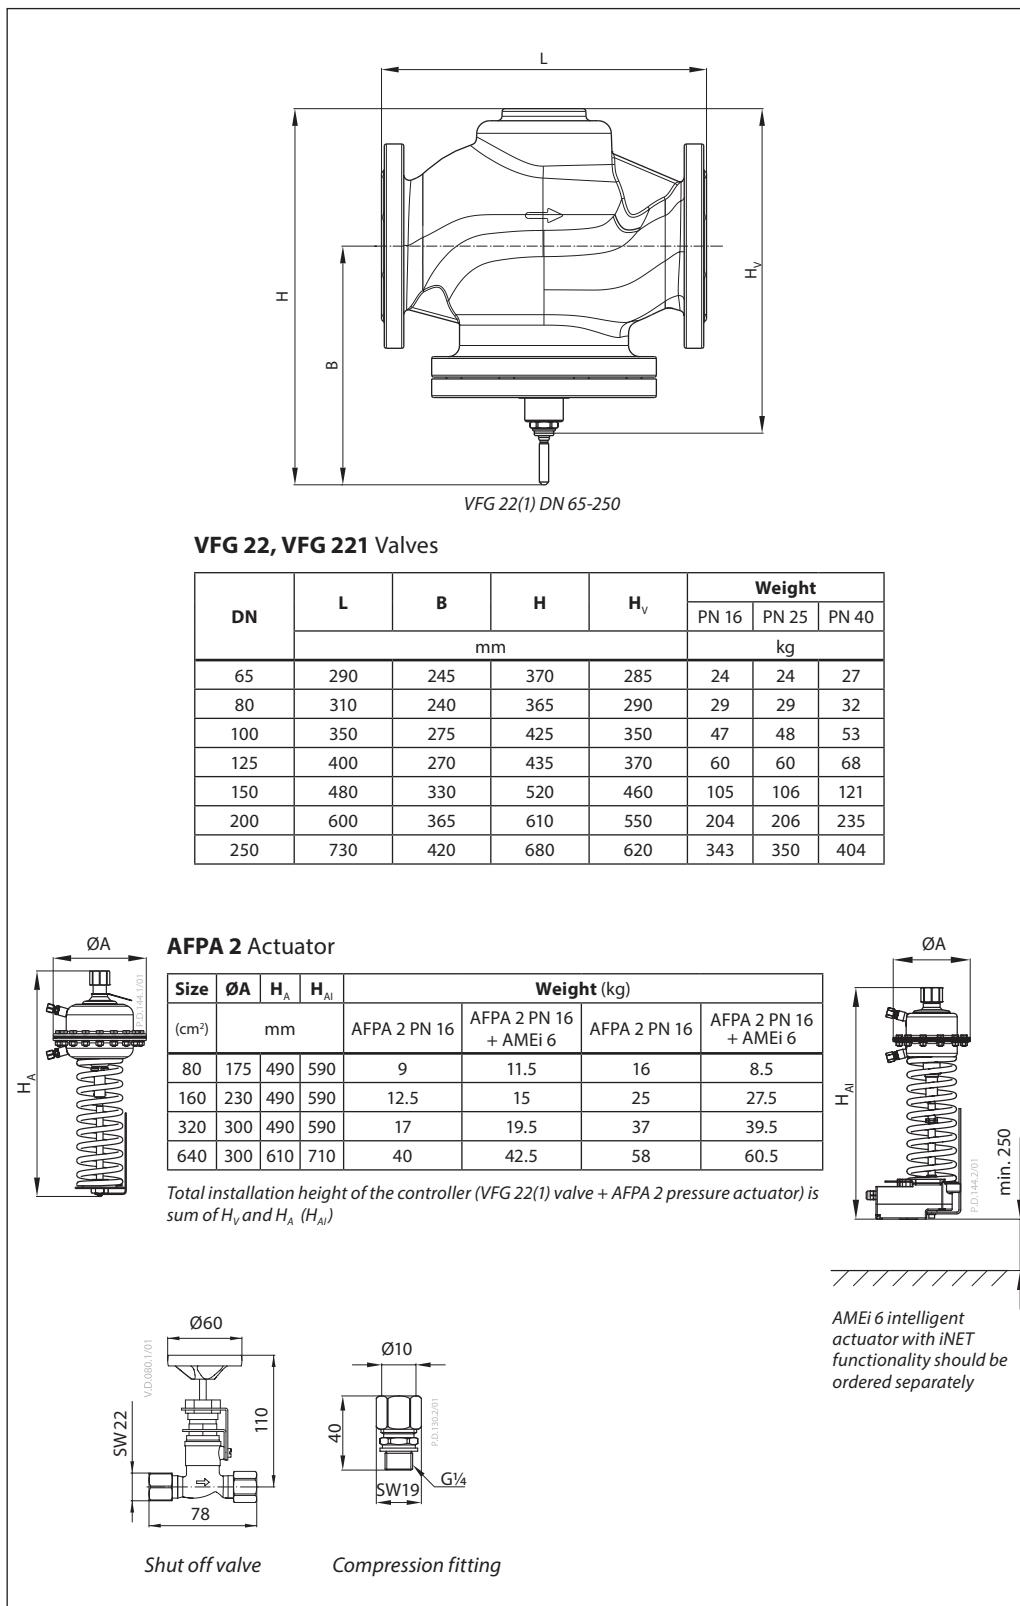

Settings*Pressure setting*

Pressure setting is being done by the adjustment of the setting spring for pressure control. The adjustment can be done by means of spring for pressure setting and pressure indicators.
